Notes:	
A	Applicable building included in comprehensive energy audit
B	Lighting demand savings {kW} associated with lighting retrofit measures
C	Lighting energy savings {kWh} associated with lighting retrofit measures
D	Estimated percentage of lighting energy transmitted to conditioned space
E	Estimated length of heating season
F	Estimated heating system efficiency, interacted with other measures
G	Resulting heating penalty due to lighting upgrades = [col C] x [col D] x 3,413 x ([col E] / 12) / [col F] / 1,000,000
H	Estimated percentage of space cooled
I	Estimated Length of cooling season
J	Estimated cooling system efficiency, interacted with other measures
K	Resulting cooling benefit due to lighting upgrades = [col C] x [col D] x 3,413 x ([col I] / 12) / [col J] / 1,000,000

WSD FAMILY

WALL SWITCH SENSOR w/ CONVERTIBLE NEUTRAL / NO NEUTRAL WIRING, PASSIVE INFRARED (PIR) or DUAL TECH (PDT)

PRODUCT OVERVIEW

The **WSD** is a stylish, easy to install, and simple to use Wall Switch Decorator style Passive Infrared (PIR) sensor. It is ideal for private offices, copy rooms, closets, or any small enclosed space without obstructions. A user programmable time delay ensures that once the room is vacated the sensor will time out and turn off the lights. Additionally, the WSD sensor has several On Modes and Switch Modes that can be programmed using the front push-button. For rooms with obstructions, the Dual Technology WSD PDT Series sensor is recommended. Additionally, all **WSD** Family sensors have a patent-pending wiring method that enables them to function either with or without a neutral connection. **WSD** units come pre-configured for wiring without a neutral; however, if connection to neutral is required by code, contractors can convert the unit in seconds (see page 3).

All **WSD** Family sensors utilize 100% digital Passive Infrared (PIR) detection. Dual Technology (**PDT** option) versions add Microphonics detection and are recommended for offices and rooms with obstructions. Additional versions include units with dual relays - perfect for bi-level applications, or bathrooms with a light and a fan.

SENSOR OPERATION — WSD sensors detect changes in the Passive Infrared (PIR) energy given off by occupants as they move within the field-of-view. In an Auto-On sensor, once occupancy is detected, an internal relay switches on the connected lighting load. In a Vacancy (Manual On) sensor, the unit's push button must first be pressed to initiate the lights on. In a dual relay sensor, once occupancy is detected the unit will automatically close Pole 1's relay while still requiring Pole 2's push-button be pressed in order to close Pole 2's relay. All modes are user adjustable (see On Modes section).

After the lights are turned on, an internal timer keeps them on during brief periods of inactivity. Once the time delay has expired, lights are turned off automatically. The default time delay is 10 minutes - chosen in order to maximize energy savings while preventing false-offs. This timer is programmable from 30 seconds to 30 minutes, and is reset every time occupancy is re-detected. Patented LampMaximzer technology is also present in these sensors, providing an additional minimum on time (disabled by default) to be utilized if desired.

WSD sensors with Passive Dual Technology (**PDT** option) first see motion using Passive Infrared (PIR) and then engage Microphonics to listen for sounds that also indicate continued occupancy. This patented technology dynamically adapts a sensor to its environment by filtering out constant background noise and detecting only noises typical of human activity.

WSD PDT

WSD 2P
WSD PDT 2P

KEY OPTIONS

VACANCY OPERATION (SA and VA)
Increased energy savings and required by many codes
- The unit's push button must first be pressed to initiate the lights on
- SA version can be reprogrammed to Auto-On operation
- VA version operates in Manual On mode only

DUAL RELAY (2P, 2P-SA, and 2P-VA)
Ideal for bi-level switched rooms or restroom with light & fan
- Includes two isolated relays, Pole 1 defaulted to Auto-On, Pole 2 to Vacancy
- Enables separate time delay per pole - programmed via each pole's push-button
- UL listed to switch different loads per pole - e.g. 277 VAC lights on Pole 1 and 120 VAC fan on Pole 2
- 2P-SA and 2P-VA versions are factory set with both poles set to manual on

LOW TEMPERATURE / HIGH HUMIDITY (LT)
Required for cold or humid areas
- Device electronics are coated for corrosion resistance
- Operates down to -40º F/C (-4º F / 20º C for PDT)

FEATURES

- 100% digital PIR detection - excellent RF immunity
- Small motion detection to 20 ft
- Dual Technology (PDT) utilizes PIR / Microphonics detection (patented)
- 100% passive detection, no potential for interference with other building systems
- Self-grounding mounting strap
- Green LED status indicator
- Device accommodates powering over ground or neutral connection (patent pending)
- Ultra low current leakage (<0.5 mA) when connected via ground
- Fully meets NEC 2011 Section 404.2C neutral requirements - no current leakage to ground when connected to neutral
- Line power and load wires are interchangeable - impossible to wire backwards (patented)
- Compatible w/ LEDs, Electronic & Magnetic Ballasts, CFLs, & Incandescents
- Push-button programmable without removing cover plate - adjustable time delays & operating modes
- Photocell standard (disabled by default) - prevents lights from initially turning on if sufficient daylight is present, but does not turn lights off. Photocell not available in Vacancy only versions.
- Integrated LampMaximizer minimum on time (patented) provides increased fluorescent lamp life - disabled by default
- Non-volatile settings memory
- Available in 5 colors (White, Ivory, Gray, Light Almond, and Black)
- Includes matching wall plate

OPERATIONAL SETTINGS

NOTE: (*) Indicates factory default (unless otherwise marked)

2 = Occupancy Time Delay

Duration sensor keeps lights on after last occupancy detection.

1 30 sec **4** 7.5 min **7** 15.0 min **10** 30.0 min
2 2.5 min **5** 10.0 min* **8** 17.5 min
3 5.0 min **6** 12.5 min **9** 20.0 min

For additional time settings, contact technical support at 1.800.PASSIVE

3 = On Mode

Automatic On turns lights on when occupancy is detected. Manual On requires a button press to turn the lights on. Reduced Turn-On directs the sensor to initially only detect large motions, such as a person entering a room. Weaker signals, such as reflections from glass, are ignored. Once lights are on, the sensor returns to maximum sensitivity.

1 Automatic On **2** Manual On **3** Reduced Turn-On

Settings 1 & 3 not available on -VA (Vacancy only) sensors.

Notes on Default Settings
- *WSD (PDT) Series default: Automatic On*
- *Default for units with -SA, -VA, or -NL option: Manual On*
- *WSD (PDT) 2P Series default: Pole 1 Auto On, Pole 2 Manual*
- *Default for 2P units with -2SA option: Both poles Manual On*

4 = Switch Modes

These modes dictate switch functionality. Pressing the button in Override Off mode (setting 1) turns off and keeps lights off until pressed again. Disabling the Switch (setting 2) prevents the button from turning the lights on. (continued next column)

Predictive Mode (setting 3) determines if a user has left the room after the lights are switched off. It does this by monitoring the space for a period after the button is pressed (Predictive Grace Time), following a delay to allow exiting the room (Predictive Exit Time). If occupancy is detected during this period the device will disable Auto-On & hold the lights off until manually switched. If no occupancy is detected the sensor instantly reverts to Auto-On mode.

If Predictive Mode with Expiration (setting 4) is enabled, once the sensor has disabled Auto-On it will continue to monitor the space. When no occupancy is detected for a duration equal to the occupancy time delay, the sensor will revert to Auto-On mode.

1 Override Off **
2 Switch Disable
3 Predictive Mode
4 Predictive Mode with Expiration*

* *Default for WSD (PDT) units & Pole 1 of WSD (PDT) 2P units*
** *Default for units with -SA or -VA options, Pole 2 of WSD (PDT) 2P units, and both poles of 2P units with -2SA options*

5 = Photocell Set-Point

The ambient light level at which the sensor prevents the lights from initially turning on. Once on, the lights will remain on until the occupancy time delay expires and turns them off.

1 Disabled* **3** 0.5 fc **5** 2 fc **7** 8 fc **9** 32 fc
2 Auto Set-pt. **4** 1 fc **6** 4 fc **8** 16 fc **10** 64 fc

Note: Sensor will be changed to Automatic On mode if photocell is enabled. LED flashes while Auto-Setpoint mode is running. Photocell not present in -VA versions.

7 = LED Operation

Indicates behavior of device's LED.

1 Occupancy Indication* **3** Disabled

9 = Restore Factory Defaults

Returns all functions to original settings.

1 Maintain Current* **2** Restore Defaults

10 = Minimum On Time

Required initial time for lamps to be on after each switch on, regardless of occupancy status. Once met, lights resume following occupancy time delay.

1 0 min (disabled)* **3** 30 min **5** 60 min
2 15 min **4** 45 min

11 = Manual On Grace Period

Time period after lights automatically turn off that they can be reactivated by motion. (Manual On (Semi-Auto) mode only)

1 0 sec **2** Unused **3** 15 sec*

12 = Dual Technology (Microphonics™)

Relative responsiveness of Microphonics detection. Included in -PDT versions only.

1 Normal* **3** Medium **5** Phase Off
2 Off **4** Low (15-10-5 min)

13 = Microphone Grace Period

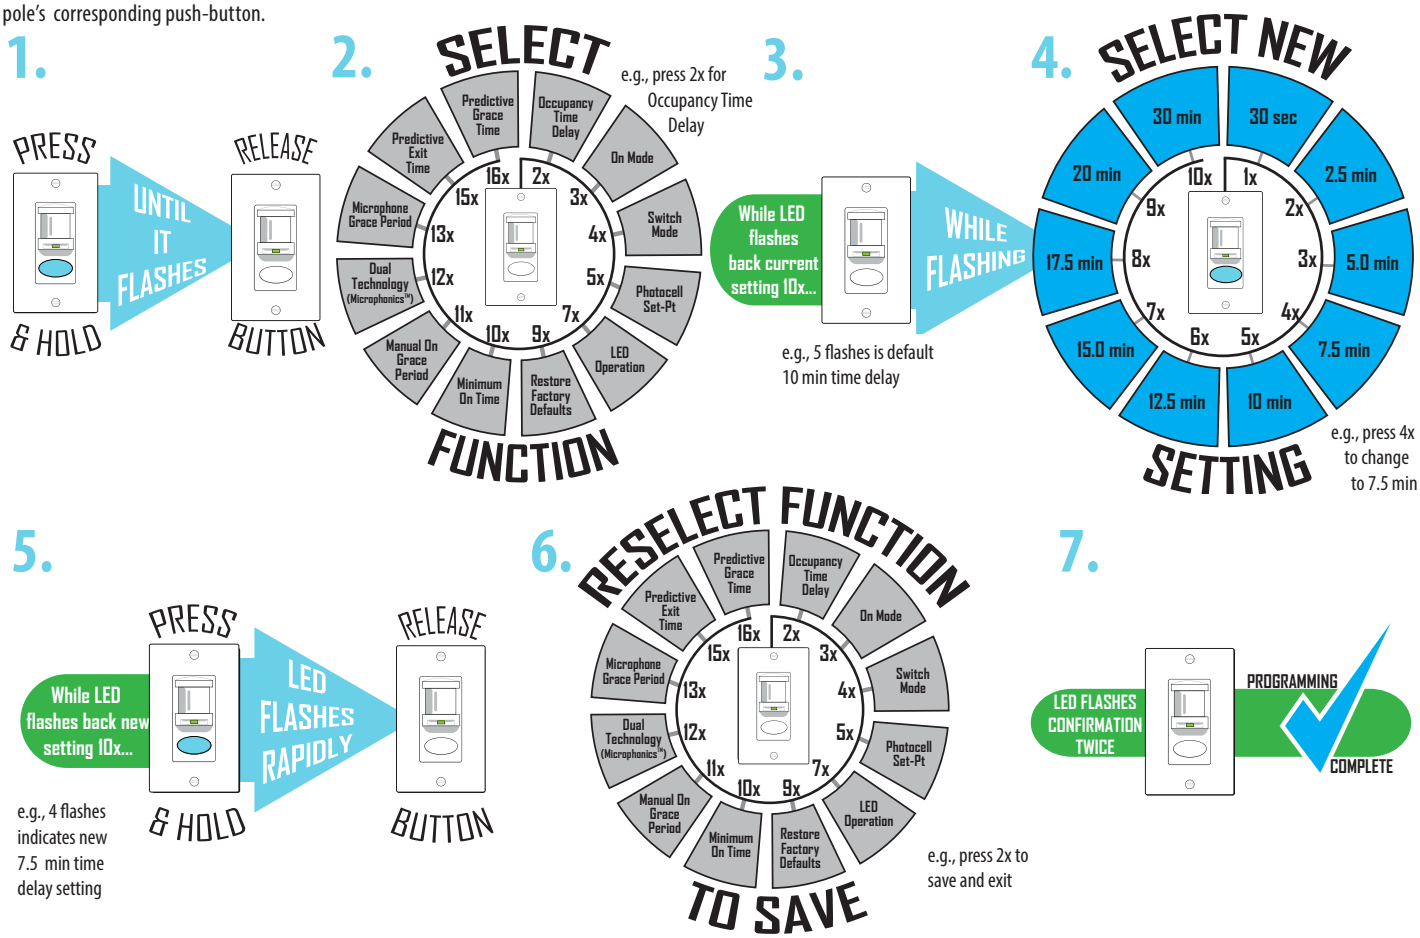
Time period after lights are automatically turned off that they can be voice reactivated. Included in -PDT versions only.

1 0 sec **3** 20 sec **5** 40 sec **7** 60 sec
2 10 sec* **4** 30 sec **6** 50 sec

15 = Predictive Exit Time

Time period after manually switching lights off for occupant to leave the space.

1 5 sec **3** 7 sec **5** 9 sec **7** 15 sec **9** 30 sec
2 6 sec **4** 8 sec **6** 10 sec* **8** 20 sec



16 = Predictive Grace Time

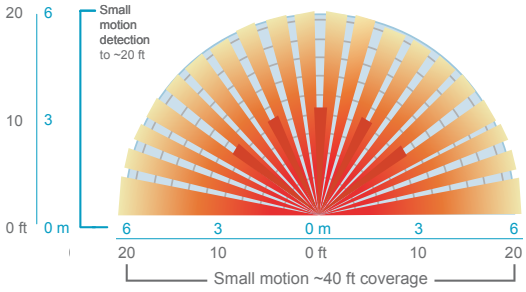
Time period after Predictive Exit Time that sensor rescans the room for remaining occupants.

1 0 sec **3** 10 sec **5** 30 sec* **7** 50 sec
2 5 sec **4** 20 sec **6** 40 sec **8** 60 sec

PROGRAMMING INSTRUCTIONS

Operational settings can be changed via the push-button sequence outlined below (note the example used is for changing occupancy time delay). Programming for 2P units done with each pole's corresponding push-button.

 ©2013 Acuity Brands Lighting, Inc. All rights reserved 06/07/13



COVERAGE PATTERN

- Small motion (e.g., hand movements) detection up to 20 ft (6.10 m), ~625 ft²
- Large motion (e.g., walking) detection greater than 36 ft (10.97 m), ~2025 ft²
- Wall-to-Wall coverage
- Passive Dual Technology (Microphonics) provides overlapping detection of human activity over the complete PIR coverage area. Advanced filtering is utilized to prevent non-occupant noises from keeping the lights on.

OVERVIEW

The **CM 10** Series Extended Range 360º occupancy sensor incorporates Passive Infrared (PIR) technology into an attractive and economical sensor to provide maximum viewing from the ceiling. When mounted at 9 ft (2.74 m), this sensor views up to 28 ft (8.53 m) in all directions. Its circular coverage pattern is designed for walking motions; making it ideal for T-shaped intersections in corridors, or other areas where wall mounting a sensor is not practical. A long hallway, for example, may require a **HW13** Series Hallway sensor at each end, with **CM 10**'s mounted in the center to fill in the distance. Low ceiling heights are also best covered by the **CM 10**. For example, when mounted at only 7 ft (2.13 m), the height of pick aisles in many distribution centers, the **CM 10** provides a 32 ft (9.75 m) diameter pattern of coverage. In applications where detection of minor motion is also required, use the **CM PDT 10** Series Dual Technology sensor.

SENSOR OPERATION

The sensor detects changes in the infrared energy given off by occupants as they move within the field-of-view. When occupancy is detected, a DC output goes high and can drive up to 200 mA of connected load. The sensor is powered with 12-24 VAC/VDC and typically operates with a **PP20** or **MP20** power pack, enabling complete 20 Amp circuits to be controlled. This innovative sensor requires no field calibration or sensitivity adjustments.

LAMPMAXIMIZER®

This sensor also contains patented LampMaximizer technology that allows users to aggressively target energy savings while still protecting lamp life. A minimum on timer, factory set at 15 minutes, helps preserve lamp life by eliminating all lamp cycles shorter than lamp manufacturers' recommendations.

A standard occupancy time delay is also present that ensures lights turn off (assuming minimum on timer has elapsed) if no occupancy is detected. This timer is factory set at 10 minutes to promote energy savings, but is adjustable between 30 seconds and 20 minutes. These adjustments can be done manually, through the units push-button, or automatically every two weeks through an advanced mode, called LampMaximizer+, that determines the optimum time delay in order to maximize both lamp life and energy savings. Additionally, this sensor maintains statistics on total lamp on time and number of cycles.

OPTIONS

LOW VOLTAGE RELAY (R)
- Enables sensors to interface with other systems (e.g., BMS, lighting panels)
- Provides dry contact closure via a SPDT, 1 Amp, 40 Volt relay
- Only one relay needed per zone
- Changes state when all connected sensors register unoccupied
- Relay requires sensor power to function

OCCUPANCY CONTROLLED DIMMING (D)
- Provides dimming output to control 0-10 VDC dimmable ballasts
- Provides a second occupancy time-out period that enables the lights to go to a dim setting before turning off
- Adjustable max/min dim setting
- Only one sensor per zone needs to have dimming output

PHOTOCELL (P)
- Auto set-point calibration
- Two selectable modes of operation
- On/Off mode: Photocell has full control during periods of occupancy
- Inhibit mode: Photocell can prevent lights from turning on if adequate daylight is available, but cannot turn lights off

PHOTOCELL W/ DIMMING (ADC)
- Photocell within sensor maintains total room light level by controlling levels of 0-10 VDC dimmable ballasts
- Photocell also has full on/off control during periods of occupancy
- Provides a second occupancy time-out period that enables the lights to go to a dim setting before turning off

Note: LampMaximizer+ features not available with ADC option

LOW TEMP/HIGH HUMIDITY (LT)
- Sensor electronics are coated for corrosion resistance
- Operates down to -40º F/C)
- Required for cooler/freezer applications

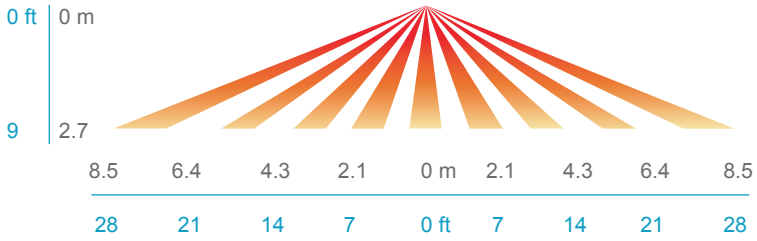
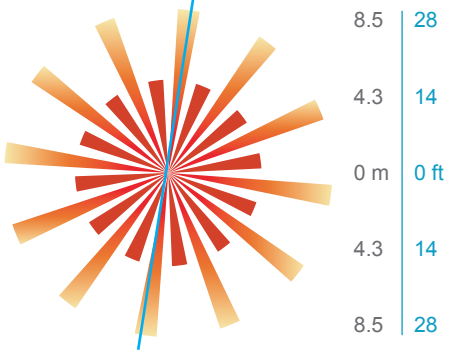
COVERAGE PATTERN



EXTENDED RANGE 360° LENS

- Best choice for large motion (e.g. walking) detection
- Viewing angle of 67° in a 360° conical shaped pattern
- Provides 28 ft (8.53 m) radial coverage when mounted to standard 9 ft (2.74 m) ceiling
- 7 to 15 ft (2.13 to 4.57 m) mounting heights provide 16 to 36 ft (4.88 to 10.97 m) radial coverage



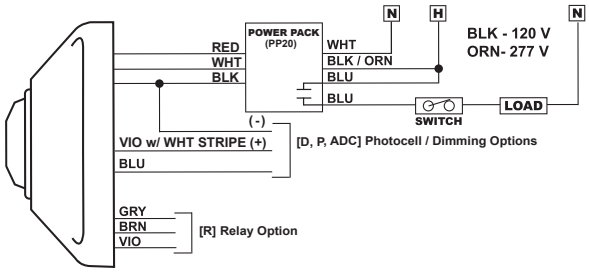
Note: Sensor's screw axis is offset 7.5° from a long detection segment

SIDE VIEW

TOP VIEW

WIRING (DO NOT WIRE HOT)

STANDARD WIRING



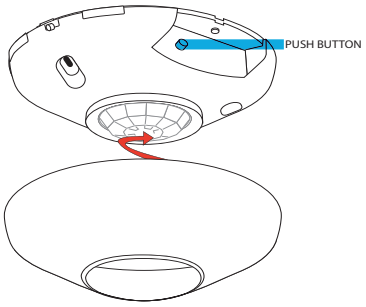
RED - Power Input (12-24 VAC/VDC)
BLACK - Common
WHITE - Occupancy State (high VDC for occupied)

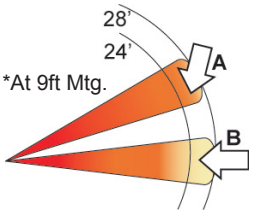
PHOTOCELL/DIMMING OPTIONS (D, P, ADC)

BLUE - Direct output to power pack for providing photocell control and/or secondary dim time out. Output is high VDC with occupancy & low light. Output also held high during secondary dim time out. For multi-level control, use two power packs and connect White wire to primary load and Blue to daylight load.

VIOLET w/ WHITE STRIPE - Connect to 0-10 VDC control wire (typically Violet) from 0-10 VDC dimmable ballast

GRAY from Ballast - Connect to sensor Black wire





RELAY OPTION (R)

GRAY / BROWN - Connected during occupied state
VIOLET / BROWN - Connected during unoccupied state
Note: Relay is energized during unoccupied state

INSTALLATION

- Mount sensor directly to a ceiling tile or a metallic grid (two self-tapping screws provided).
- Sensor's mounting holes also align with 3.5" octagon or single gang handy box (screws not provided).
- Sensor will detect motions crossing segments more effectively than motions parallel to beams.
- For optimal detection, position sensor such that segments are crossed upon entrance and unable to view outside the space.

A: When walking across beam, detection will occur at approximately 28 feet. (8.53 m)
B: When walking into beam, detection will occur at approximately 24 feet. (7.32 m)

PROGRAMMING

Refer to instruction card IC7.001 for default settings and directions on programming the sensor via the push-button.

OVERVIEW

Classrooms are ideal applications for the **CM PDT 10** Series Extended Range 360º occupancy sensor. When mounted at 9 ft (2.74 m), this sensor provides line of sight Passive Infrared (PIR) detection of walking type motions up to 28 ft (8.53 m) in all directions. Additionally, the **CM PDT 10** provides overlapping Microphonics™ technology to detect smaller motions and occupant movements that occur behind obstructions. When comparing small motion detection, the **CM PDT 10** far out performs dual technology sensors that are specified with 2,000 ft² of coverage. Spaces with low ceiling heights are also best covered by the **CM PDT 10**.

SENSOR OPERATION

Sensors with Passive Dual Technology (PDT) first see motion using 100% digital Passive Infrared (PIR) detection and then engage Microphonics™ to hear sounds that indicate continued occupancy. This patented technology uses Automatic Gain Control (AGC) to dynamically self adapt a sensor to its environment by filtering out constant background noise and registering only noises typical of human activity. When occupancy is detected, a DC output goes high and can drive up to 200 mA of connected load. If needed, a 10 second grace period also allows the lights to be voice reactivated after shutting off. The sensor is powered with 12-24 VAC/VDC and typically operates with a **PP20** or **MP20** power pack, enabling 20 Amp circuits to be controlled.

LAMPMAXIMIZER®

This sensor also contains patented LampMaximizer technology that allows users to aggressively target energy savings while still protecting lamp life. A minimum on timer, factory set at 15 minutes, helps preserve lamp life by eliminating all lamp cycles shorter than lamp manufacturers' recommendations. A standard occupancy time delay is also present that ensures lights turn off (assuming minimum on timer has elapsed) if no occupancy is detected. This timer is factory set at 10 minutes to promote energy savings, but is adjustable between 30 seconds and 20 minutes. These adjustments can be done manually, through the unit's push-button, or automatically every two weeks through an advanced mode, called LampMaximizer+, that determines the optimum time delay in order to maximize both lamp life and energy savings. Additionally, this sensor maintains statistics on total lamp on time and number of cycles.

OVERVIEW

The **WV 16** Series Wide View occupancy sensor is designed to mount in a corner and detect small motions up to 40 ft (12.19 m) away, and larger motions up to 70 ft (21.34 m) away. This makes it ideal for 30 ft x 30 ft (9.14 m x 9.14 m) classrooms or corridors up to 70 ft (21.34 m) long (for specific long narrow hallway applications, see **HW13** product data sheet). The enclosure's convenient tilting feature enables the sensor to be mounted at any height from 8 to 10 ft (2.44 to 3.05 m). When corner or wall mounting is not possible, the **WV BR** bracket accessory can be used to mount the **WV 16** to the ceiling. Additionally, the **WV 16** may be used in combination with other sensors to customize coverage for very large or irregularly shaped spaces. For rooms with obstructions, use the **WV PDT 16** Series sensor which adds Microphonics™ detection.

SENSOR OPERATION

The sensor detects changes in the infrared energy given off by occupants as they move within the field-of-view. When occupancy is detected, a DC output goes high and can drive up to 200 mA of connected load. The sensor is powered with 12-24 VAC/VDC and typically operates with a **PP20** or **MP20** power pack, enabling complete 20 Amp circuits to be controlled. This innovative sensor requires no field calibration or sensitivity adjustments.

LAMPMAXIMIZER®

This sensor also contains patented LampMaximizer technology that allows users to aggressively target energy savings while still protecting lamp life. A minimum on timer, factory set at 15 minutes, helps preserve lamp life by eliminating all lamp cycles shorter than lamp manufacturers' recommendations.

A standard occupancy time delay is also present that ensures lights turn off (assuming minimum on timer has elapsed) if no occupancy is detected. - Conformally coated Circuit Board is corrosion resistant from moisture
- Operates down to -4º F(-20º C)

WV-PDT SERIES
& WV-BR (Bracket)
w/ Enhanced Photocell Option!

Classrooms are the ideal application for the *WV-PDT* Dual Technology Wide View Sensor. Installed in the corner of the room along the entrance wall, this inconspicuous sensor provides line of sight PIR detection of small movements up to 40 feet away, and combines overlapping Microphonic™ detection around obstructions. Many classrooms are filled with shelving, projects, or lab benches. Total coverage of the room is always maintained no matter how cluttered the space becomes! The *WV-PDT* is also used in corridors due to its ability to view up to 70 feet for walking motions, or large open storage areas where obstructions may block the PIR's ability to view. For large lecture halls, multiple *WV-PDTs* may be wired together, or along with any other low voltage sensors.

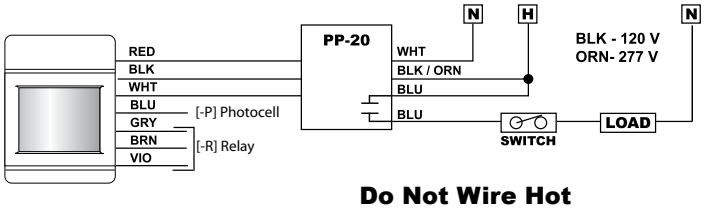
SENSOR OPERATIONS

Sensors with Passive Dual Technology (PDT) first "See" motion using Passive Infrared (PIR) and then engage Microphonics™ to "Hear" sounds that indicate continued occupancy. This patented technology uses Automatic Gain Control (AGC) to dynamically self adapt a sensor to its environment by filtering out constant background noise and detecting only noises typical of human activity. When occupancy is detected, a DC output goes high and can drive up to 200 mA of connected load. The sensor is powered with 12 to 24 VAC/VDC and typically operates with a PP-20 or MP-20 Power Pack; enabling complete 20 Amp circuits to be controlled. An internal timer, factory set at 10 minutes, keeps the lights "On" during brief periods of no activity. Once the lights turn "Off", a 10 second grace period allows for the occupant to voice re-activate the lights back "On" if needed. This timer is selectable at 2.5 minute increments from 30 seconds to 20 minutes, and is reset every time occupancy is re-detected.

DAYLIGHTING CONTROL OPTION (WV-PDT-P)

For spaces with abundant natural light from windows or skylights, this series offers an On/Off Photocell (-P) option. The -P option is ideal for public areas like vestibules, corridors, and restrooms; or spaces like classrooms and private offices. As the daylight levels change in the room, the -P option insures that an adequate light level is maintained according to a programmable set-point value. The -P option provides two modes of operation; one simply inhibits the lights from turning on, while the other has full On/Off control of the lights. For more detailed information on these daylighting control features, see the CM-PC Technical Data Sheet.

INTERNAL LOW VOLTAGE RELAY OPTION (WV-PDT-R)



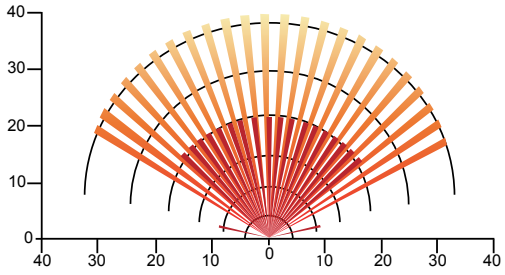
To enable a sensor to interface with a building management system, the -R option provides dry contact closure via a SPDT, 1 Amp, 40 Volt relay. The relay coil is energized and changes state when ALL connected sensors register "Unoccupied". When using multiple sensors, only one sensor per zone needs to have a relay.
Note: Sensor must have power at all times for the relay to function.

CATALOG INFORMATION

MODEL #	DESCRIPTION	TEMPERATURE	OP. VOLTAGE	CURRENT
WV-PDT	Passive Dual Technology Wide View	14° to 160° F	12 to 24 VAC/VDC	3 mA
Add suffix				
-R	SPDT Relay, 1 Amp		12 to 24 VAC/VDC	13 mA
-P	On/Off Photocell		12 to 24 VAC/VDC	3 mA
-RP	Relay & On/Off Photocell		12 to 24 VAC/VDC	13 mA
-LT	Low Temp/High Humidity	-4° to 160° F		
Accessory				
WV-BR	Ceiling Mount Bracket			

WIRING INSTRUCTIONS

Wire lead connections are Class II, 18 to 22 AWG.



Do Not Wire Hot

INSTALLATION CONSIDERATION

The *WV-PDT's* rear enclosure is beveled so as to be corner mounted at 8 to 10 feet (see tilt settings). Ideally, the sensor should mount, as shown below, in the corner above the entrance door or in the corner along the same wall as the entrance. If the room is large and multiple sensors are needed, mount the second sensor in the opposite corner, however tilt sensor forward to ensure that the PIR collector beams are not viewing out the door. For mounting heights above 10 feet, use the *WV-BR* and mount sensor to angled side to provide an initial 30º lookdown. The PDT line of sensors, unlike any other occupancy sensor, self adjusts to its environment. The Automatic Gain Control (AGC) feature allows the sensor to tune out constant background noise. However, changing noise signals like talking, shuffling of papers, and general human activities are readily detected. Avoid locating the sensor near Wall Clocks that make "Clicking Noises" every minute.

TOP VIEW

STANDARD WV-PDT

RED - 12 to 24 VAC/VDC
BLACK - Common
WHITE - Output (HI DC for Occupancy)

PHOTOCELL OPTION (-P)

BLUE - Photocell output (High: Occupied & Low Light)

Note: Use Blue wire from sensor in place of White wire. For multi-level control, use 2 Power Packs and connect White to primary load and Blue to daylight load.

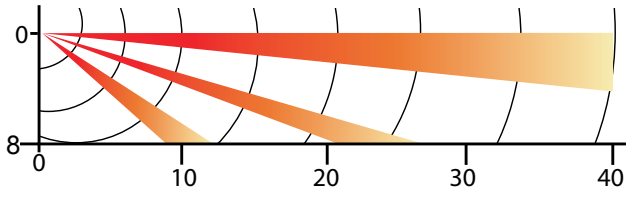
RELAY OPTION (-R)

GRAY / BROWN - Connected during Occupied state
VIOLET / BROWN - Connected during Unoccupied state

Note: Relay is energized during Unoccupied state

CEILING MOUNT BRACKET (WV-BR)

The *WV-BR* Ceiling Mount Bracket allows the *WV-PDT* to be mounted from the ceiling in rooms where mounting to the wall is not possible.



WV-BR

TILT ADJUSTMENT

Mt. Ht.	Position
7' - 8'	Vertical
8' - 9'	Center
9' - 10'	Forward
Above 10'	Use WV-BR

Radio Powr Savr™

Wireless sensor product family

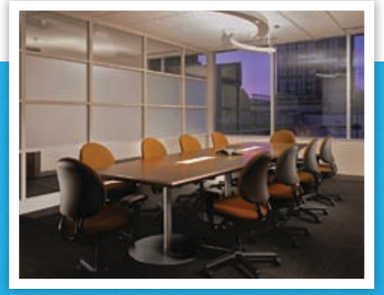
LUTRON®

save energy with Lutron™ ®

What is Radio Powr Savr™?

Radio Powr Savr is a family of wireless occupancy/vacancy sensors and daylight sensors that provide convenient light control and are engineered for optimum energy savings and easy installation. Radio Powr Savr wireless sensors save energy by directing compatible Lutron RF dimmers and switches to reduce lighting levels or turn lights off based on room occupancy/vacancy and available daylight.

Saves energy



- Occupancy/vacancy sensors turn lights off when room is unoccupied—choose a 1-, 5-, 15- or 30-minute time-out based on needs in the space
- Daylight sensors reduce electric lighting or turn lights off when there is enough available daylight to light the space
- Use sensors with dimmers for additional energy savings

Delivers reliable lighting performance

- Exclusive Lutron XCT™ technology in occupancy/vacancy sensors detects fine motions of room occupants
- Clear Connect™ Radio Frequency (RF) technology ensures reliable, consistent RF performance between devices
- Proportional daylight control in daylight sensor provides accurate daylight harvesting
- 10-year battery life

Installs in minutes

- Sensors require no wiring
- Front-accessible buttons make setup easy
- Sensors have simple test modes to verify ideal locations during installation

The technology

Because lighting is a critical building system, the performance of the light control system must be flawless. Lutron-exclusive technologies make Radio Powr Savr™ sensors the best choice for reliability and performance.

XCT™ technology
XCT, exclusively from Lutron, is a new occupancy-sensing technology with a refined sensitivity to detect subtle movements in a space. By detecting fine motions, like typing or reading, XCT ensures the lights operate when the space is occupied.

Clear Connect™ RF technology
Clear Connect is a proprietary wireless protocol, so interference from other devices is nearly impossible. And because each control is uniquely addressed, the risk of interference from other sensors is eliminated. With Clear Connect, the sensors communicate flawlessly, every time.

Wireless sensors in the Radio Powr Savr family communicate directly with the following Lutron lighting controls:

- Maestro Wireless® dimmers and switches
- GRAFIK Eye® QS light control units with wireless technology
- Energi Savr Node™ with QS sensor module (models available for EcoSystem®, SoftSwitch®, and 0–10 V applications)

Sensors communicate with up to 10 dimmers and switches. Add up to three occupancy/vacancy sensors per dimmer or switch for maximum coverage.

Note:
Radio Powr Savr sensors are part of a system and cannot be used to control a load without a compatible RF dimming or switching device.

Ceiling mount occupancy/ Vacancy sensor:
Diameter: 4.00" (102mm)
Depth: 1.30" (33mm)

Wall mount occupancy/ Vacancy sensor:
Width: 1.80" (46mm)
Height: 4.35" (110mm)
Depth: 1.35" (34mm)

Daylight sensor:
Diameter: 1.60" (41mm)
Depth: 0.70" (17mm)

LSXR FAMILY

FIXTURE MOUNT SENSOR w/ INTERCHANGEABLE LENSES, PIR, LINE VOLTAGE

PRODUCT OVERVIEW

The **LSXR** Family of fixture mount occupancy sensors provides reliable and versatile solutions for commercial and industrial lighting control applications. All **LSXR** Family sensors utilize passive infrared (PIR) detection and feature interchangeable lenses, providing flexibility for multiple mounting height and coverage pattern requirements.

All **LSXR** Family sensors utilize 100% digital Passive Infrared (PIR) detection and power from / switch line voltage. Available options include dual relays, HVOLT powering, and an integrated switching / dimming photocell.

SENSOR OPERATION

The sensor detects changes in the infrared energy given off by occupants as they move within the field-of-view. When occupancy is detected, a self-contained relay switches the connected lighting load on. No initial field calibration or sensitivity adjustments are required. **LSXR** Family sensors are designed to switch both LED and fluorescent lighting loads. Robust relay protection makes **LSXR** units capable of enduring the extreme inrush conditions often encountered with LED loads.

Additionally, **LSXR** sensors utilize patented LampMaximizer technology that allows users to aggressively target energy savings, by using shorter occupancy time delays, while still protecting fluorescent lamp life. A minimum on timer, factory set at 15 minutes, helps preserve lamp life by eliminating all lamp cycles shorter than fluorescent lamp manufacturers' recommendations.

A standard occupancy time delay is also present to ensure lights turn off (once minimum on timer has also elapsed) if no occupancy is detected. This timer is factory set at 10 minutes to promote energy savings, but is adjustable between 30 seconds and 30 minutes. These adjustments may be done through the unit's push-button.

FEATURES

- Four interchangeable lenses - high mount 360º, low mount 360º, high mount aisleway, and small motion 360º
- Integrated mounting bracket drops lens down 3" from chase nipple - no bracket accessory required
- 100% digital PIR detection - provides excellent RF immunity
- No PIR field calibration or sensitivity adjustments required
- Single or dual relay versions - designed with robust protection from the harsh switching requirements of T5 fluorescent and LED loads
- Powers from single or two-phase line connections
- Reversible hot & load wires - eliminates backwards wiring
- Photocell and 0-10 VDC dimming options
- Digital push-button programming - no tools or analog adjustments required
- Non-volatile settings memory
- Convenient test mode - quickens initial walk and/or photocell testing
- Green LED indicator
- LampMaximizer® minimum on timer (15 min) enables usage of shorter occupancy time delays while protecting fluorescent lamp life
- Default 10 minute occupancy time delay

KEY OPTIONS

HIGH/LOW OCCUPANCY OPERATION (HL)

- Provides high/low control of a 0-10V dimmable fixture.
- Lights are reduced to an energy saving minimum dim level after expiration of occupancy time delay.
- If relay is wired, lights will switch off after a second time delay.

SWITCHING PHOTOCELL (P & 2P-P)

- Provides increased energy savings by switching lights off during occupied periods with sufficient daylight contribution from windows or skylights.
- Lights will be switched back on if light level falls below set-point.
- 2P-P version always switches both relays together.
- Optional inhibit mode: Photocell will prevent lights from initially turning on if adequate daylight is available, but will not turn lights off.

DIMMING & SWITCHING PHOTOCELL (ADC)

- Provides maximum energy savings by first dimming down, then switching off, lighting during periods of sufficient daylight contribution from windows or skylights.
- When daylight contribution decreases, lights will be first switched back on at full dim and then raised up as necessary.
- Controls 0-10V dimmable fluorescent ballasts and LED drivers.

COMBINATION DIMMING & SWITCHING PHOTOCELL w/ HIGH/LOW OCCUPANCY OPERATION (ANL)

- Provides maximum energy savings by first dimming down, then switching off, lighting during periods of sufficient daylight contribution from windows or skylights.
- During unoccupied periods without sufficient daylight lights are dropped to low dim setting, insuring minimum light levels are maintained at night.
- Controls 0-10V dimmable fluorescent ballasts and LED drivers.

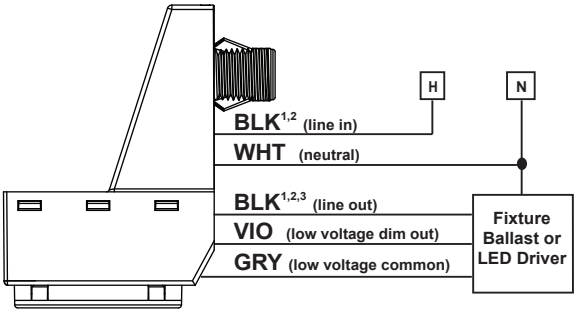
ALTERNATING OFF RELAYS (2P-AO & 2P-AOP)

- Sequence of operation where both relays close during periods of occupancy, but only one opens during vacancy.
- The relay left closed alternates in order to promote even lamp wear.
- 2P-AOP version also includes switching photocell.

DUAL ZONE SWITCHING PHOTOCELL (2P-DZ)

- Provides dual level photocell control for dual relay versions.

SINGLE POLE SWITCHING PHOTOCELL (2P-SZ)



- Occupancy controls one pole only.
- Switching photocell controls other pole.

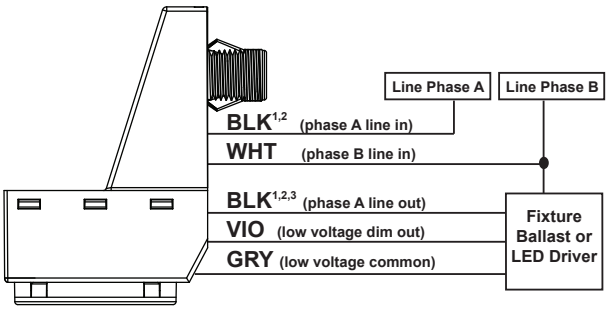
WIRING DIAGRAMS - SINGLE RELAY

WIRING TO SINGLE PHASE POWER (120/277/347 VAC)

BLACK[1,2] - 120/277 VAC Input (RED wire for 347 VAC)
BLACK[1,2,3] - Switched Line Voltage Output to Luminaire (RED wire for 347 VAC)
WHITE - Neutral
VIOLET - Low Voltage Dimming Output (0-10 VDC) } wires present with dimming options only
GRAY - Low Voltage Common }



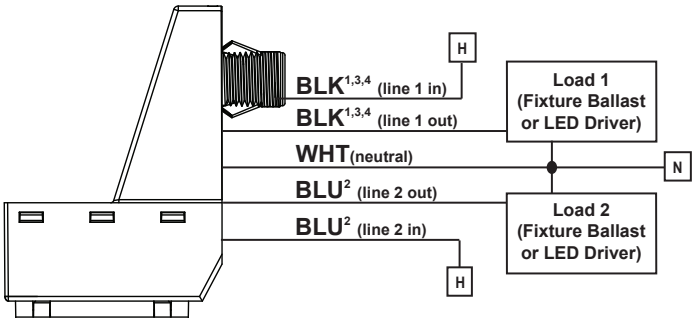
Notes
1. Black wires can be reversed
2. Wire is Red for HVOLT version (required for 347 VAC)
3. Disconnect and cap Black output wire going to driver/ballast if switching fixture is not required.

WIRING TO 2-PHASE POWER (208/240/480 VAC)*

*__Safety Note__: only one line phase is being switched, use in direct fixture mount applications only

BLACK[1,2] - 208/240 VAC Phase A Input (RED wire for 480 VAC)
BLACK[1,2,3] - Switched Line Voltage Output to Luminaire (RED wire for 480 VAC)
WHITE - Phase B of 208/240/480 VAC Input
VIOLET - Low Voltage Dimming Output (0-10 VDC) } wires present with dimming options only
GRAY - Low Voltage Common }

Notes
1. Black wires can be reversed
2. Wire is Red for HVOLT version (required for 480 VAC)
3. Disconnect and cap Black output wire going to driver/ballast if switching fixture is not required.



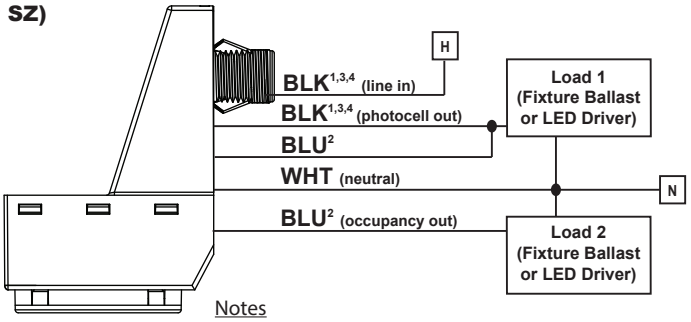
WIRING DIAGRAMS - DUAL RELAY (e.g., LSXR xx 2P)

WIRING FOR 120/277/347

BLACK[1,3,4] - Pole 1: 120/277 VAC Input (RED wire for 347 VAC)
BLACK[1,3,4] - Pole 1: Switched Line Voltage Output to Luminaire (RED wire for 347 VAC)
WHITE - Neutral
BLUE[2] - Pole 2: 120/277/347 VAC Input (must be same phase as pole 1)
BLUE[2] - Pole 2: Switched Line Voltage Output to Luminaire

Operational States for -DZ option

	Occupancy			No Occ.
	Low Daylight	Med. Daylight	High Daylight	
Load 1	On	Off	Off	Off
Load 2	On	On	Off	Off



Notes
1. Black wires can be reversed
2. Blue wires can be reversed
3. Wire is Red for 347 VAC Version
4. Red wires can be reversed

WIRING FOR 120/277/347 WITH -SZ OPTION (e.g., LSXR 6 2P SZ)

BLACK[1,3,4] - Pole 1: 120/277 VAC Input (RED wire for 347 VAC)
BLACK[1,3,4] - Pole 1: Switched Line Voltage Output to Luminaire (RED wire for 347 VAC)
WHITE - Neutral
BLUE[2] - Pole 2: 120/277/347 VAC Input (must be same phase as pole 1)
BLUE[2] - Pole 2: Switched Line Voltage Output to Luminaire

Operational States for -SZ option

	Daylight / Occ.	Daylight / No Occ.	No Daylight & Occ.	No Daylight & No Occ.
Load 1	Off	Off	On	On
Load 2	Off	Off	On	Off

Notes
1. Black wires can be reversed
2. Blue wires can be reversed
3. Wire is Red for 347 VAC Version
4. Red wires can be reversed

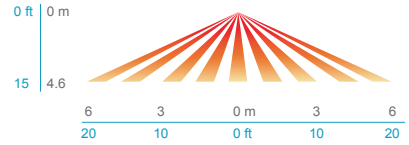
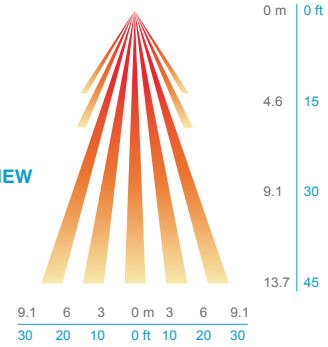
LT Option: 20 to 90% non-condensing
(electronics coated for corrosion resistance)

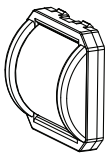


COVERAGE PATTERNS

HIGH MOUNT 360º LENS (#6)

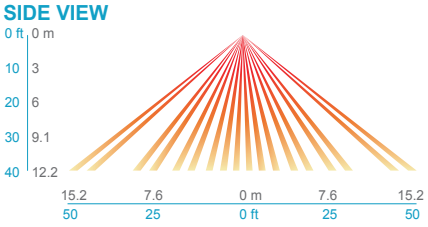


- Best choice for 15 to 45 ft (4.57 to 13.72 m) mounting heights
- 15 to 20 ft (4.57 to 6.10 m) radial coverage overlaps area lit by a typical high bay fixture
- Excellent detection of large motion (e.g. walking) up to a 35 ft (10.76 m) mounting height
- Excellent detection of extra large motion (e.g. forklifts) up to a 45 ft (13.72 m) mounting height

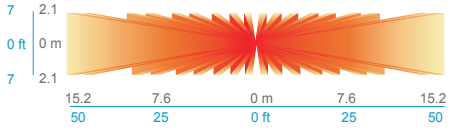


LOW VIEW

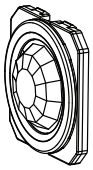
HIGH VIEW



HIGH MOUNT AISLEWAY LENS (#50)

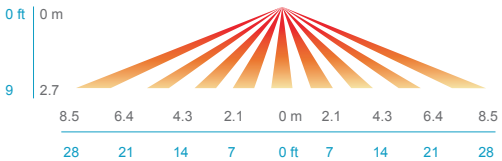


- Provides a bi-directional coverage pattern ideal for warehouse racking
- 1.2x mounting height equals approximate detection range in either direction
- Typical 40 ft (12.19 m) mounting detects 50 ft (15.24 m) in either direction
- Superior aisleway coverage compared to a masked 360º lens

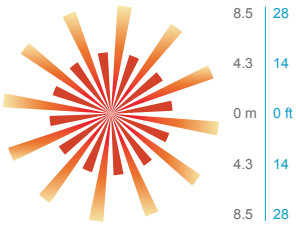


SIDE VIEW

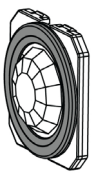
TOP VIEW



LOW MOUNT 360º LENS (#10)

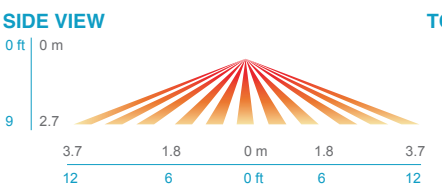


- Best choice for large motion detection (e.g. walking)
- 360º conical shaped pattern
- Provides ~24 ft (7.32 m) radial coverage (~2000 ft²) when mounted at 9 ft (2.74 m)
- 7 to 15 ft (2.13 to 4.57 m) mounting heights provide 16 to 36 ft (4.88 to 10.97 m) radial coverage
- Detection range improves when walking across beams compared to into beams

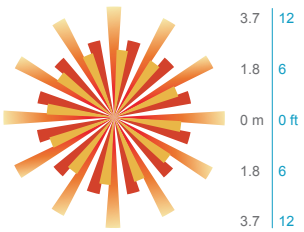


SIDE VIEW

TOP VIEW



SMALL MOTION 360º LENS (#9)



- Best choice for small motion (e.g. hand movements) detection
- 360º conical shaped pattern
- Provides 12 ft (3.66 m) radial coverage (~500 ft²) when mounted to standard 9 ft (2.74 m) ceiling
- 8 to 15 ft (2.44 to 4.57 m) mounting heights provide 10 to 20 ft (3.05 to 6.10 m) radial coverage
- Lens assembly is marked with a gray ring around lens to differentiate versus the #10 lens

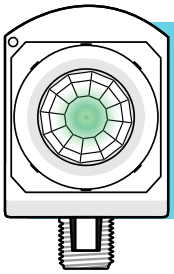
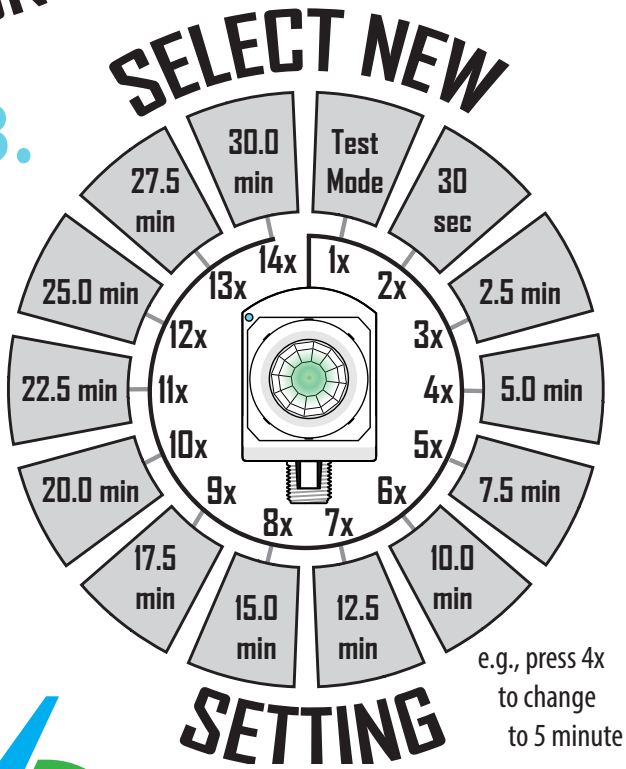
PROGRAMMING INSTRUCTIONS



Operational settings can be changed via the push-button sequence outlined below (note the example used is for changing pole 1 occupancy time delay).

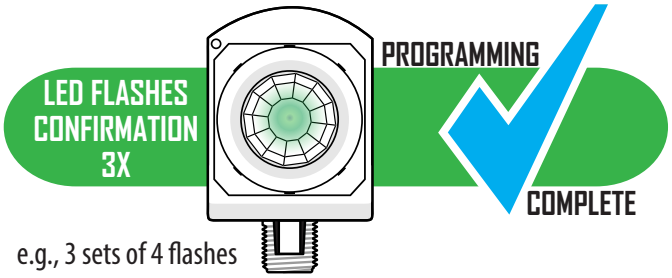
1.

e.g., press 2x for Occupancy Time Delay (Pole 1)



2.

While LED flashes back current setting 3x... go to step 3



e.g., 6 flashes is default 10 minute time delay

3.

e.g., press 4x to change to 5 minute

4.

e.g., 3 sets of 4 flashes confirms 5 minute setting

OPERATIONAL SETTINGS

NOTE: (*) Indicates factory default (unless otherwise marked)

2 = Occupancy Time Delay (Pole 1)

The length of time the sensor will keep the lights controlled by relay 1 on and at full bright after it last detects occupancy, assuming Minimum On Time (function 4) has been met.

1	Test Mode**	**6**	10.0 min*	**11**	22.5 min
2	30 sec	**7**	12.5 min	**12**	25.0 min
3	2.5 min	**8**	15.0 min	**13**	27.5 min
4	5.0 min	**9**	17.5 min	**14**	30.0 min
5	7.5 min	**10**	20.0 min		

For additional time settings, contact technical support at 1.800.PASSIVE

** Standard default unless specified in model number*

***Test mode disables Minimum On Time (Function 4), sets Occupancy Time Delay (Function 2 & 3) to 30 sec, and shortens photocell transition times and dimming rate. Mode will expire after 10 min or if Function 2 is set back to a time delay.*

3 = Occupancy Time Delay (Pole 2)

The length of time the sensor will keep the lights controlled by relay 2 (if present) on after it last detects occupancy, assuming minimum on time (Function 4) has been met.

1	NA	**6**	10.0 min*	**11**	22.5 min
2	30 sec	**7**	12.5 min	**12**	25.0 min
3	2.5 min	**8**	15.0 min	**13**	27.5 min
4	5.0 min	**9**	17.5 min	**14**	30.0 min
5	7.5 min	**10**	20.0 min		

** Standard default unless specified in model number*

4 = Minimum On Time (Lamp Maximizer)

The length of time required for lamps to be on in order to prevent short cycling that reduces fluorescent lamp life. If occupancy time delay expires prior to minimum on time being satisfied, the lamps will remain on until time has been met.

1	0 min**	**3**	30 min	**5**	60 min
2	15 min*	**4**	45 min		

** Standard default, reverts to 0 min if occ. time delay is changed from 10M*
***Default for 5M, 15M, 20M, 30M option versions*

5 = Photocell Set-Point

The target light level (at the sensor) that is to be maintained. Selecting Auto (Setting 1) will initiate on/off cycling procedure where sensor finds close-loop set-point. Not applicable to non-photocell versions.

1	Auto	**4**	2.0 fc	**7**	16.0 fc
2	0.5 fc	**5**	4.0 fc*	**8**	32.0 fc
3	1.0 fc	**6**	8.0 fc	**9**	64.0 fc

6 = Photocell / Dimming / 2-Pole Modes

Single Relay Units with P (Photocell) Option:

1 ***Disabled:*** *Photocell does not affect lights.*

2 ***Full On/Off Ctrl*:*** *Provides increased energy savings by switching lights off during occupied periods with sufficient daylight contribution from windows or skylights. Lights will be switched back on if light level falls below set-point.*

3 ***Inhibit Only Ctrl:*** *Photocell will prevent lights from initially turning on if adequate daylight is available, but will not turn lights off.*

Units with ADC or ANL (Dimming) Options:

1 ***Disabled:*** *Photocell does not affect lights.*

2 ***Automatic Dimming & Switching (-ADC):*** *Enables the sensor during occupied periods to dim lights down and then turn them completely off by opening the relay.*

3 ***Combination Dimming & Switching Photocell w/ High/Low Occ. Operation (-ANL):*** *Provides maximum energy savings by dimming and/or switching off lighting during periods of sufficient daylight contribution from windows or skylights. During unoccupied periods without sufficient daylight lights are dropped to low dim setting, insuring minimum light levels are maintained at night.*

Dual Relay (2P) Units - All Options:

1 *Photocell (if present) is Disabled.*

2 ***Standard Photocell Option (-P):***
Photocell controls both relays together with a single set-point.

3 ***Single Zone (-SZ) Photocell Option:***
Relay 1 controlled by photocell only, relay 2 controlled by occupancy only.

4 ***Dual Zone (-DZ) Photocell Option:***
Relay 1 controlled according to set-point, relay 2 controlled at fixed % higher as specified in Dual Zone Photocell Offset % (Function 14).

5 ***Inhibit Only Ctrl:*** *Photocell will prevent lights from initially turning on if adequate daylight is available, but will not turn lights off. Photocell controls both relays according to set-point.*

6 ***Alternating Off Relays (-AO):*** *Both relays close during periods of occupancy, but only one opens during periods of vacancy. The relay left closed is alternated in order to promote even lamp wear.*

7 ***Alternating Off Relays w/ Photocell (-AOP):*** *Both relays close during periods of occupancy, but only one opens during periods of vacancy or high daylight. The relay left closed is alternated in order to promote even lamp wear.*

7 = Sunlight Discount Factor

Value used to improve the tracking accuracy of a sensor with a photocell during periods of high daylight. Decreasing the value will lower the controlled level of the lights.

1	x/1*	**4**	x/4	**7**	x/7	**10**	x/10
2	x/2	**5**	x/5	**8**	x/8		
3	x/3	**6**	x/6	**9**	x/9		

9 = Restore Factory Defaults

Returns all functions to original settings.

1 Maintain Current* 2 Restore Defaults

10 = Dimming Range Max (High Trim)

The maximum output level of a sensor with dimming. Default is "10 VDC" unless indicated in model number.

1	Off	**4**	3 VDC	**7**	6 VDC	**10**	9 VDC
2	1 VDC	**5**	4 VDC	**8**	7 VDC	**11**	10 VDC*
3	2 VDC	**6**	5 VDC	**9**	8 VDC		

11 = Dimming Range Min (Low Trim)

For sensors with -ADC or -ANL option, this setting is the minimum output level to which the photocell will dim the lights. For lights to turn off from daylight, setting 1 must be selected.

Also, for all sensors with dimming, this setting is the dim level the lights will drop to when the Occupancy Time Delay (Function 2) expires. Note if the relay is wired, lights will still turn completely off after the Dim to Off Occupancy Time Delay (Function 15) expires.

1	Off*	**4**	3 VDC	**7**	6 VDC	**10**	9 VDC
2	1 VDC**	**5**	4 VDC	**8**	7 VDC	**11**	10 VDC
3	2 VDC	**6**	5 VDC	**9**	8 VDC		

**Indicates default unless otherwise specified in model number*
***Indicates default for -HL option unless otherwise specified in model number*

12 = Switch (Button) Mode

When enabled, mode allows user to switch the relay by pressing the push button for test purposes (e.g., in order to test wiring). Note there is a short delay after pushing the button before the relay switches.

1 Disabled* **2** Enabled

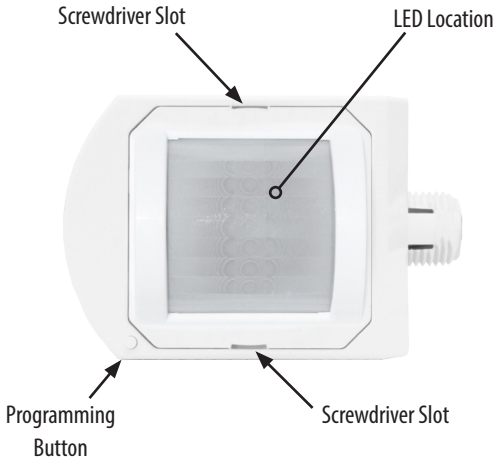
14 = Dual Zone Photocell Offset %

Relative value of photocell set-point that is used to control relay 2. Applies only to dual relay (2P) units with the -DZ option.

1	110%	**4**	140%	**7**	170%	**10**	200%
2	120%	**5**	150%*	**8**	180%		
3	130%	**6**	160%	**9**	190%		

15 = Dim to Off Occupancy Time Delay

After the Occupancy Time Delay (Function 2) has expired, this setting specifies the amount of time lights are held at minimum dim (Function 11) before turning off. Setting is only applicable for sensors with -HL and -ADC dimming options.



1	0 sec*	**5**	7.5 min	**9**	17.5 min
2	30 sec	**6**	10.0 min	**10**	20.0 min
3	2.5 min**	**7**	12.5 min	**11**	Stays at dim (never off)

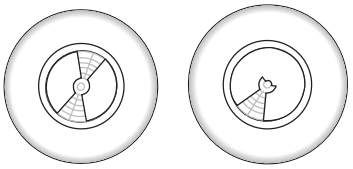
INSTALLATION



- To mount, push the unit's threaded chase nipple through a 1/2" knockout (7/8" hole) in a fixture.
- A snap lock mechanism on the chase nipple will secure the sensor.
- To interchange lenses, pry out installed lens using a small flat screw driver inserted into one of the slots shown below
- Apply light pressure on lens frame sides to snap in new lens.
- Install lens with the most optimum coverage pattern for a particular space and application
- Masking labels are included with the high bay 360º lens to mask off a portion of its coverage pattern for end-of-aisle, or to trim the side viewing to create a rectangular pattern for center-of-aisle.
- Masking labels are included with the high bay aisle way lens to mask off a portion of its coverage pattern for end-of-aisle applications.

AUTOMATIC DIMMING CONTROL PHOTOCELL SENSOR - CEILING MOUNT, LOW VOLTAGE

TYPICAL APPLICATIONS

- Daylight Harvesting
- Continuous Dimming of a 0-10 VDC Dimmable Ballast

FEATURES

- Automatically Dims/Brightens 0-10 VDC ballasts as daylight changes
- Capable of finding optimum set-point
- Digital Set-Point Control
- Programmable via simple push-button commands
- Dimming sinks up to 20 mA
- Green LED Activity Indicator
- 100 Hr Lamp Burn-in Timer Mode

AVAILABLE OPTIONS

- Dual Zone Control (-DZ)
- Low Temp/Hi Humidity (-LT)

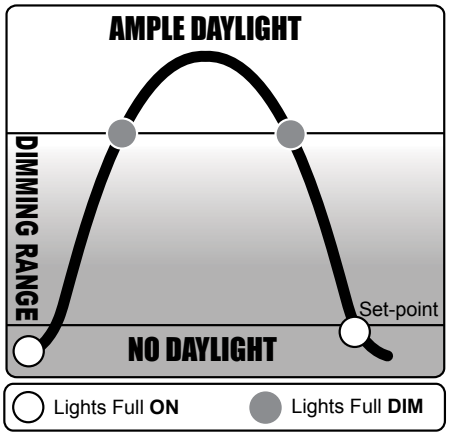
SPECIFICATIONS

- Size: Circular, 4.55" Dia., 1.55" Deep (11.56 cm Dia., 3.94 cm Deep)
- Sensor Weight: 5 Ounces
- Sensor Color: White
- Mounting: Ceiling Tile Surface, Round Fixture or Junction Box
- Relative Humidity: 20 to 90% non-condensing
- Operating Temp: 14º to 160º F (-10° to 71° C)
- Storage Temp: -14º to 160º F (-26° to 71° C)
- 12 to 24 VAC/VDC Oper. Voltage
- UL, CUL, and Title 24 Compliant
- 5 Year Warranty
- Made in U.S.A.

LOW TEMP/HI HUMIDITY(-LT)

- Conformally coated Circuit Board is corrosion resistant from moisture
- Operates down to -40º F(-40º C)

CM-ADC



w/ Dual Zone Option!

The *CM-ADC Series* of Automatic Dimming Control sensors provide continuous control of dimmable ballasts for daylight harvesting applications. Ideal for public spaces with windows like vestibules, corridors, or bathrooms; the *CM-ADC* works by monitoring daylight conditions in a room, then controlling a 0-10 VDC dimmable ballast so as to insure that adequate lighting levels are maintained. To add full On/Off switching to the dimming control provided by the *CM-ADC*, see the Technical Data Sheet on the CM-PC-ADC sensor. Additionally with the Dual Zone (-DZ) option, a second customized controlled output is provided. All units are powered by 12 to 24 VAC/VDC.

AUTOMATIC DIMMING CONTROL OPERATION

The sensor controls a 0-10 VDC dimmable ballast to achieve maximum daylight harvesting while maintaining a minimum light level referred to as the "set-point". When no daylight is available, the sensor will allow the dimmable ballast to operate at its full bright level (10 VDC). As daylight increases and begins to contribute to the overall light level of the room, the Automatic Dimming Control (ADC) feature starts dimming the ballast proportionally. At the point when sufficient daylight is present to maintain the set-point without any contribution from the lights, the sensor will hold the ballast at its full dim setting (0 VDC). When daylight levels fall below the set-point again, the Automatic Dimming Control will start reducing the dim level (increasing the brightness) in order to increase the overall light level. Finally, at the point when all daylight contribution is gone, the ballast will again be at its full bright level (10 VDC). With dimming control sensors, the set-point can be easily adjusted after it has been initially programmed (via either the Automatic or Manual process) using the Incremental control feature that steps the brightness setting (voltage) up or down 10% (1 VDC) and adjusts the set-point accordingly.

DUAL ZONE (-DZ) OPTION

Daylight contribution diminishes as the distance from the source (windows) increases. Therefore lights that are different distances from a window should not be controlled from the same photocell sensor output. With the -DZ option, the *CM-ADC* has a second output that can control an additional 0-10 VDC dimmable ballast according to a new set-point that is a selected percentage higher than that of the primary zone's set-point. This makes the -DZ option ideal for classrooms with individually controlled parallel rows of lights.

Model Numbering System: CM-ADC-[DUAL ZONE]-[TEMP/HUMIDITY]

SERIES #	DESCRIPTION	DUAL ZONE	TEMP/HUMIDITY
CM-ADC	Automatic Dimming Control Sensor - Ceiling Mount, Low Voltage	Blank = Single Zone -DZ = Dual Zone	Blank = 14º to 160º F -LT = -40º to 160º F

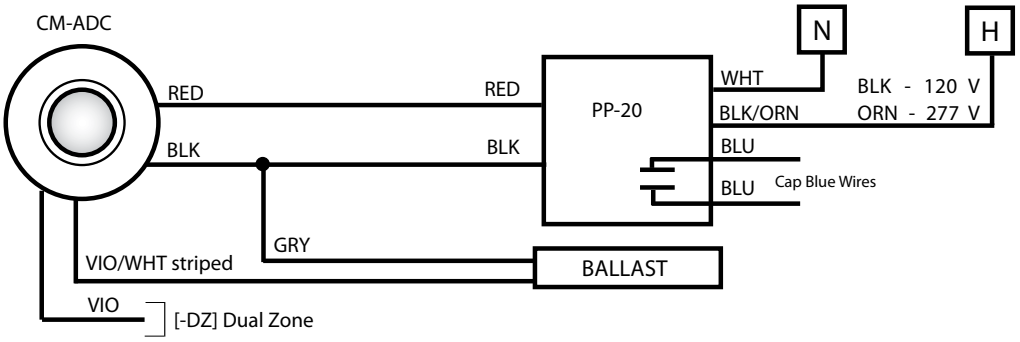
LIGHT LEVEL SET-POINT

The sensor functions by comparing the amount of daylight available with a defined acceptable lighting level. This threshold, called the “set-point”, is utilized in all daylight harvesting lighting control decisions. The sensor can find its optimum set-point via the **Automatic Set-Point Programming** mode. In this mode, the sensor takes light readings at different dim settings and then sets the minimum light level to be the amount contributed by the artificial lights being controlled. It is assumed that the space is properly lit by design, however, if this is not the case the set-point may be easily adjusted to the occupant’s preference. All modes and settings are entered digitally via a push button sequence. Once programmed, the exact value of the set-point (in foot candles) can be read out from the sensor via a series of LED flashes.

DIGITAL SET-POINT CONTROL

Each sensor contains a microcontroller that enables the user to engage the Automatic Set-Point Programming mode or to manually set / adjust the set-point. The manual process involves calculating and inputting the exact foot-candle value of the desired set-point into the sensor. It is important to note that the set-point is the light level required at the face of the sensor and that this value will be much different than the level required at a work surface. Typically, light levels at the ceiling are 3 to 5 times less than the work surface. For example, if 50 fc is desired at the work surface, the sensor should be set at 10 fc. For best results, measure the levels at both locations using a foot-candle meter before programming the set-point.

WIRING INSTRUCTIONS



Wire lead connections are Class II, 18 to 22 AWG.

STANDARD CM-ADC

RED - 12 to 24 VAC/VDC
BLACK - Common
VIOLET/WHITE striped - Connect to Violet wire from Zone 1’s 0-10 VDC dimmable ballast. Also connect ballast Gray wire to sensor Black wire.

DUAL ZONE OPTION (-DZ)

Connect the additional solid VIOLET wire to Zone 2’s 0-10 VDC dimmable ballast. Also connect Zone 2 ballast Gray wire to sensor Black wire.

WARRANTY: Sensor Switch, Inc. warrants these products to be free of defects in manufacture and workmanship for a period of sixty months. Sensor Switch, Inc., upon prompt notice of such defect will, at its option, provide a Returned Material Authorization number and a replacement product.
LIMITATIONS AND EXCLUSIONS: This Warranty is in full lieu of all other representation and expressed and implied warranties (including the implied warranties of merchantability and fitness for use) and under no circumstances shall Sensor Switch, Inc. be liable for any incidental or consequential property damages or losses.

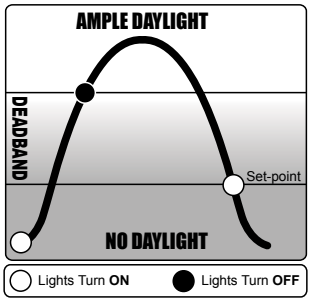
LOW TEMP/HI HUMIDITY(-LT)

- Conformally coated Circuit Board is corrosion resistant from moisture
- Operates down to -40º F(-40º C)

CM-PC



w/ Dual Zone Option!

The *CM-PC* series of On/Off Photocell sensors provide the industry's most intelligent control of lighting for daylight harvesting applications. Ideal for public spaces with windows like vestibules, corridors, or bathrooms; the sensors work by monitoring daylight conditions in a room, then controlling the lighting so as to insure that adequate lighting levels are maintained. The *CM-PC* is used for On/Off lighting control; turning off the lights when sufficient natural light is present and turning them on when additional lighting is necessary. Additionally with the Dual Zone (-DZ) option, a second set of customized control outputs is provided. All *CM-PC* sensors can be used alone or as part of an occupancy sensor system. The sensors are powered with 12 to 24 VAC/VDC and typically operate with a PP-20 or MP-20 Power Pack; enabling complete 20 Amp circuits to be controlled. To add dimming control to the On/Off switching provided by the *CM-PC*, see the Technical Data Sheet on the CM-PC-ADC sensor.

ON/OFF SWITCHING OPERATION

The lights turn "On" when the space's overall light level drops below a programmable threshold called a "set-point". The lights turn "Off" when light is above the set-point plus a 10 to 20% safety factor and deadband. The safety factor will prevent the system from cycling when the light level is very near the set-point. The deadband is the level of light contributed by the artificial lights being controlled. This level is tracked so if the lighting conditions change (for example a lamp burns out) the point at which the lights turn off is adapted accordingly. If the photocell is looking up at skylights and can not view the lights being controlled, there is no deadband and the sensor is said to be working "open loop". There is also an adaptive 5-25 minute delay before the photocell turns the lights off to prevent the system from cycling on a cloudy day; and a 45 second delay before switching from "Off" to "On".

DUAL ZONE (-DZ) OPTION

With the -DZ option, a second low voltage output is provided to control an additional zone of lighting according to one of two operational modes. The default mode, referred to as "Duo" operation, is ideal for A/B switching applications (also called inboard/outboard) as it determines the necessary On/Off combination of the zones in order to maintain adequate lighting. The alternate mode uses a relative set-point for the second zone that is a selected percentage higher than the primary zone's set-point. This mode accounts for the fact that daylight contribution diminishes as the distance from the source (windows) increases. Called "Percentage" operation, this second mode is ideal for classrooms with individually controlled parallel rows of lights. A single shared set-point is used by both modes and can be user programmed or automatically determined by the sensor itself.

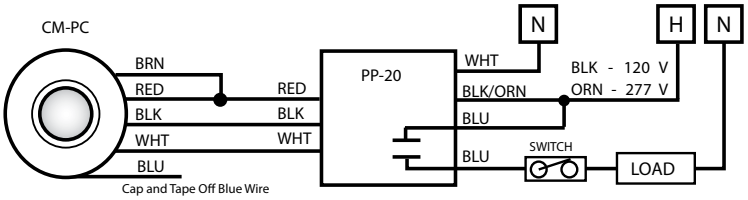
Model Numbering System: CM-PC-[DUAL ZONE]-[TEMP/HUMIDITY]

SERIES #	DESCRIPTION	DUAL ZONE	TEMP/HUMIDITY
CM-PC	On/Off Photocell Sensor - Ceiling Mount, Low Voltage	Blank = Single Zone -DZ = Dual Zone	Blank = 14º to 160º F -LT = -40º to 160º F

LIGHT LEVEL SET-POINT

The sensor functions by comparing the amount of daylight available with a defined acceptable lighting level. This threshold, called the set-point, is utilized in all daylight harvesting lighting control decisions. The sensor can find its optimum set-point via the **Automatic Set-Point Programming** mode. In this mode, the sensor sets the minimum light level to be the amount contributed by the artificial lights being controlled. It is assumed that the space is properly lit by design, however, if this is not the case the set-point may be easily adjusted to the occupant's preference. All modes and settings are entered digitally via a push button sequence. Once programmed, the exact value of the set-point (in foot candles) can be read out from the sensor via a series of LED flashes.

DIGITAL SET-POINT CONTROL



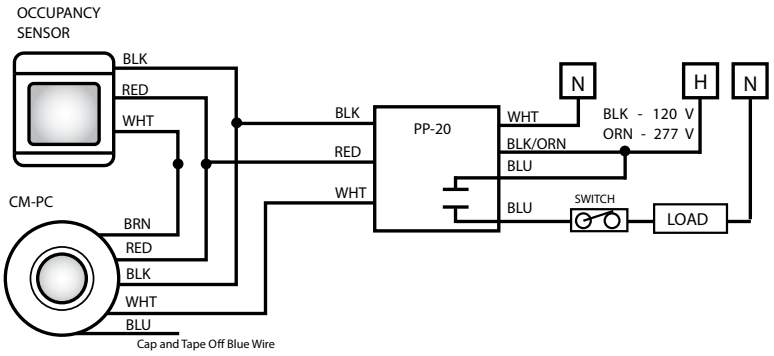
Each sensor contains a microcontroller that enables the user to engage the Automatic Set-Point Programming mode or to manually set / adjust the set-point. The manual process involves calculating and inputting the exact foot-candle value of the desired set-point into the sensor. It is important to note that the set-point is the light level required at the face of the sensor and that this value will be much different than the level required at a work surface. Typically, light levels at the ceiling are 3 to 5 times less than the work surface. For example, if 50 fc is desired at the work surface, the sensor should be set at 10 fc. For best results, measure the levels at both locations using a foot-candle meter before programming the set-point.

WIRING INSTRUCTIONS

Wire lead connections are Class II, 18 to 22 AWG.

STANDARD CM-PC

WHITE - Outputs high VAC/VDC (from Brown wire) when sensor calls for Lights "On" (eg. the room is Dark)
BLUE - Outputs high VAC/VDC (from Brown wire) when sensor calls for Lights "Off" (eg. adequate daylight light is present)
RED - 12 to 24 VAC/VDC
BLACK - Common
BRN - Connect to Low Voltage Control input (Red wire on a Power Pack, White wire on an occupancy sensor)



DUAL ZONE OPTION (CM-PC-DZ)

BLUE wire will output high DC when sensor calls for Lights "On" for Zone 2.
(Note: With the -DZ option the SPDT Relay is no longer present and the White wire will output only DC)

WIRING TOGETHER WITH OCCUPANCY SENSORS

Wire upstream occupancy sensor White wire to sensor Brown wire. When the space is unoccupied, the lights stay off regardless of daylight levels. However when occupied, the photocell sensor will control the lights according to daylight level and set-point.

WARRANTY: Sensor Switch, Inc. warrants these products to be free of defects in manufacture and workmanship for a period of sixty months. Sensor Switch, Inc., upon prompt notice of such defect will, at its option, provide a Returned Material Authorization number and a replacement product.
LIMITATIONS AND EXCLUSIONS: This Warranty is in full lieu of all other representation and expressed and implied warranties (including the implied warranties of merchantability and fitness for use) and under no circumstances shall Sensor Switch, Inc. be liable for any incidental or consequential property damages or losses.

TS-400 Digital Time Switch

PROJECT

LOCATION/TYPE

Product Overview

Description

The InteliSwitch TS-400 series digital time switches automatically turn lights off after a preset time. The simple pushbutton operation provides users with convenient time out lighting control without the nuisance of twist timers.

Operation

The TS replaces an existing wall switch. The TS-400 operates between 100 and 300 volts. Pressing the TS's on/off button turns lights on. The lights will remain on for the duration of the time-out setting which is adjustable from 5 minutes to 12 hours. Lights can be turned off before the time-out setting expires by pressing the on/off button. Also, the unit can be reset at any time by holding down the on/off button for 2 seconds. This will bring the timer back to its original time out setting and restart the countdown.

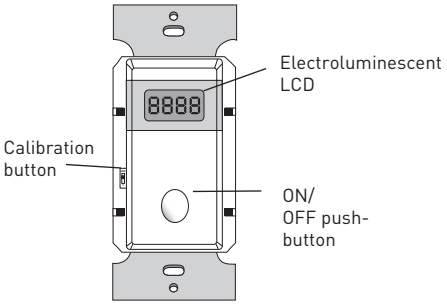
Time Scroll Overrides

The time scroll option allows users to temporarily override the time out setting without adjusting the settings. Time scroll is selected with the calibration button. With time scroll programmed to "UP", lights can be held on longer than the time out period. With time scroll programmed to down "DN", lights can be turned off sooner than the time out period. Pressing the on/off switch for more than 4 seconds causes the timer to scroll in the set direction throughout the possible time out settings.

Applications

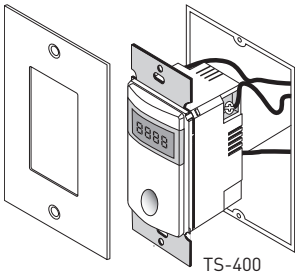
The TS is an ideal lighting control choice in equipment rooms, storage areas, and closets.

Features



- Time-out settings range from 5 minutes to 12 hours for flexibility in fitting many applications
- Optional flash and beep warnings allow time to reset the switch if someone is present
- Time scroll option provides temporary override of the preset time out period
- Simple reset feature for returning the switch to its original preset time-out setting
- Electroluminescent back-lit LCD shows timer countdown
- Terminal style wiring simplifies installation
- Zero crossing reduces stress on the relay and increases product longevity
- Pushbutton programming gives the TS an easy set up process
- Setting the time-out for 2 hours and time scroll to down allows Title 24 compliance for using override switches
- Compatible with decorator wall plates
- Qualifies for ARRA-funded public works projects

Specifications



- TS-400: 120/277 VAC; 50/60 Hz
- Time-out adjustments range from 5 minutes to 12 hours (5 minute increments to 1 hour, then 15 minute increments to 12 hours)
- Optional visual warning: flashes lights at 5 minutes and 1 minute prior to time-out
- Optional audible warning: beeps every 5 seconds at 1 minute prior to time-out
- No minimum load requirement
- Compatible with all electronic ballasts, ELV, MLV, LED, and motor loads
- Dimensions: 2.66" x 1.79" x 1.76" (67.5mm x 45.5mm x 44.7mm)
- UL and cUL listed
- Five year warranty

ESM 4:
Energy Management System Upgrade/Expansion

ESM Overview

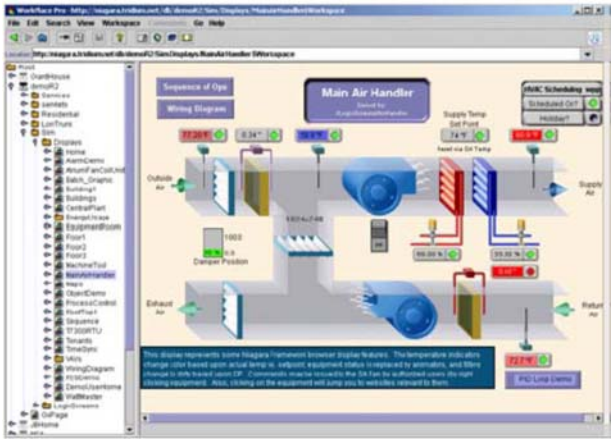

Figure 4.1: Ameresco proposes to expand the existing EMS.

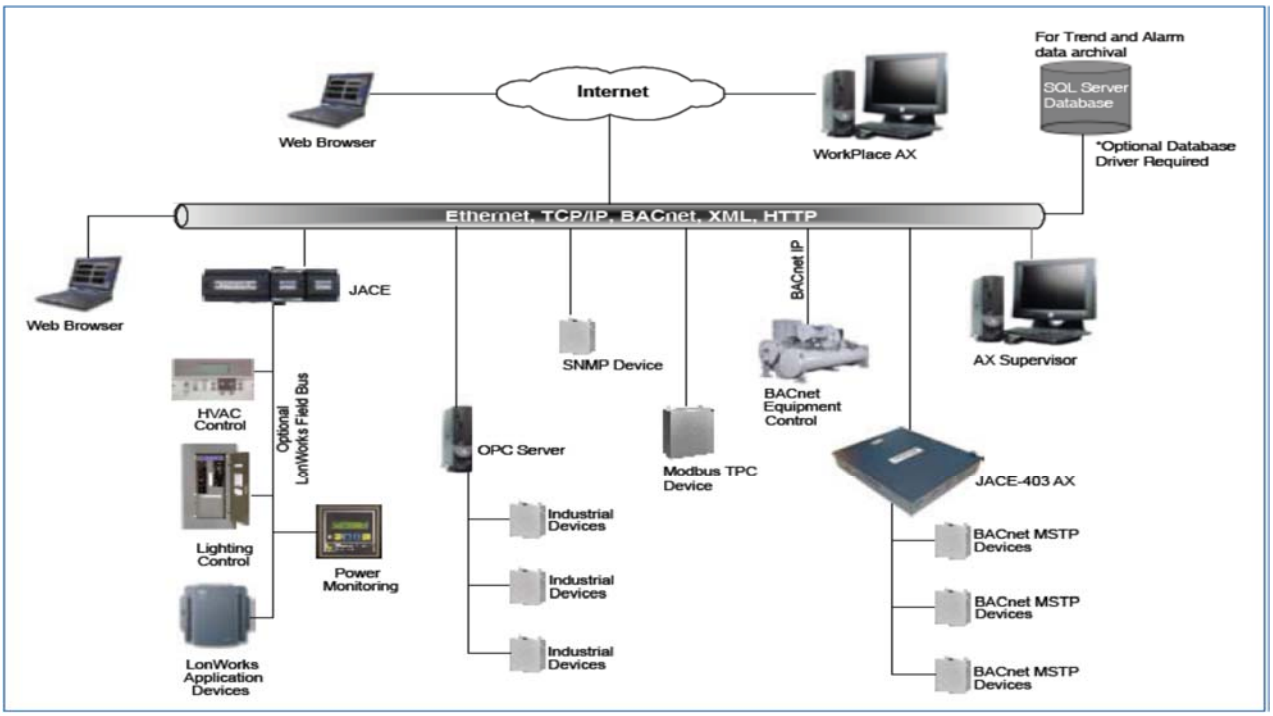
Ameresco proposes to update the existing EMS systems installed in the City Hall, Police Court Building, Dennis Malone Aquatic Center, Beals Senior Center, Main Library, Manross Library, and Youth Services Building. Ameresco will also install new programmable thermostats at the City Hall Annex maintenance garage.

The proposed EMS would be "open protocol" and "interoperable" with other manufacturer's products. This feature would allow products from any vendor to be installed as the system is maintained or expanded in the future. The recommended EMS would be accessible from any Internet-enabled personal computer with web browsing software and would provide reduced energy consumption, increase system reliability and improve occupant comfort for the City. The proposed EMS will provide dynamic systems control and utility consumption reporting capabilities for the entire City.

Under the proposed EMS, Ameresco would install a new open protocol Tridium^{AX} based EMS and new Direct Digital Control (DDC) actuators that would replace existing pneumatic controls for the air handling units and other control valves, as well as exhaust fans and circulator pumps. All existing pneumatic controls will be removed at the City Hall, Police Court building and Manross Library.

ESM Detail

Existing System



The existing control systems at the City of Bristol are outlined in the table below. The controls in each building consist of a mix of full DDC systems, DDC systems with pneumatic valves/actuators, stand-alone electronic controls such as thermostats with zone valves, and fully pneumatic systems.

"Page content is subject to Confidentiality Restrictions"

Building	Existing Control System Front End	Primary Temperature Control Method
City Hall	Invensys GCM	Barber Colman, Pneumatic
Police Court	Invensys GCM	Barber Colman, Pneumatic
Malone Aquatic Center	JCI Stand-Alone Controls	Standard Tstats
Beals Senior Center	JCI Metasys	JCI Metasys DDC
Main Library	Invensys GCM	Invensys I/A Series
Manross Library	Invensys GCM	Invensys I/A Series, Pneumatic
Youth Services Building	Invensys GCM	Invensys I/A Series, Barber Colman

Proposed System

Ameresco is proposing an "open protocol" energy management system with Tridium's Niagara^{AX} Framework. The open protocol specification will allow the City to connect products from almost any LonWorks™ or BACnet vendor to the proposed system, in addition to other systems based on MODBUS or JCI's N2. Future upgrades and expansions can be competitively bid and will not be limited to the products of any one manufacturer. Ameresco has no commercial alliance with any EMS vendor and considers all applicable products. Ameresco believes the City's interests would be best served with an open protocol EMS architecture.

Typical Tridium ™configuration.

A new Tridium AX server will be installed in the server closet in the IT Department at City Hall to control and monitor the new EMS across all buildings included in this measure. The server will have all the software necessary to program and expand the EMS including all necessary licenses. This server sits on the existing WAN, behind existing firewalls. Access to the server will be secured through password gateways and existing security systems. Communications between the field controllers will take place on a dedicated, non-Ethernet

network. The new EMS will be networked using the City's existing WAN. New control system interface equipment will be connected to the existing communications infrastructure. An Internet interface built into the new EMS will allow an authorized and authenticated operator to access EMS information through standard web browser software from any computer connected to the WAN.

During construction, Ameresco will work with the City to ensure that all buildings necessary are able to communicate on the new Tridium system. At this time we believe this will be possible. Some outlying buildings have Internet service but not City network which would still work. We are not aware of any buildings included for a networked EMS that would have no means for communicating with the EMS

Site	Proposed System Front End	Proposed Temperature Control Method
City Hall	Tridium Niagra AX	Integrate and Reuse existing Barber Colman Controls, Replace existing pneumatic valves and Dampers with electronic equivalents
Police Court	Tridium Niagra AX	Integrate and Reuse existing Barber Colman Controls, Replace existing pneumatic valves with electronic equivalents
Malone Aquatic Center	Tridium Niagra AX	New Schneider TAC I/A Series Controls
Beals Senior Center	Tridium Niagra AX	Integrate and reuse existing JCI Metasys DDC
Main Library	Tridium Niagra AX	Integrate and reuse existing Invensys I/A Series
Manross Library	Tridium Niagra AX	Integrate and reuse existing Invensys I/A Series, Replace existing pneumatic valves and Dampers with electronic equivalents
Youth Services Building	Tridium Niagra AX	Integrate and reuse existing Invensys I/A Series and Barber Colman Controls

City Hall

Integrate Existing DDC EMS

Provide and install a new Open Protocol Web Accessible Direct Digital Control (DDC) System that will integrate the existing Barber Colman and Pneumatic system. A new TAC I/A Series ENC-520 Enterprise Network Controller running the latest version of the Niagara AX framework will replace the existing Invensys GCM front end. The EMS scope of work for this building includes the following:

- Provide and install a new JACE running on the latest version of Tridium's NiagaraAX at the time of construction with all updates provided until the date of acceptance.
- Provide new Supervisory Controller including open license having no expiration (Ameresco OrgId must be added at time of licensing).
- Perform point by point inspection of existing control system including terminal units and provide a report listing any deficiencies.
    - Existing damper actuators, control valves, and other control devices found to be deficient are not to be replaced unless specified in scope of work
    - Provide all category 5e communication wiring from new FX to customer network closet
- Provide programming of all points, graphics and control sequences for each piece of equipment controlled.
- Set up trends and alarms per Ameresco/City's specifications

"Page content is subject to Confidentiality Restrictions"

- **New Points of Control:** The City Hall will receive an additional 60 control points. (See Below)
- **Existing Points of Control to be Integrated:** Existing Barber Colman EMS
- **Existing Points of Control to be Modified:** Implement Space Temperature and Occupancy Schedules, Implement Optimum Start

Pneumatic to DDC Conversion

- Demo and remove the existing pneumatic controls including valve actuators and damper actuators. Where possible existing valves will be retrofit with electronic actuators. In some cases the entire valve may need to be replaced.
- The City Hall will receive an additional 60 control points.
- New system to be based on points list provided by Ameresco
    - Replacement of 32 pneumatic damper actuators and 28 pneumatic hot/chilled water valves with electronic equivalents. The additional equipment to be controlled is listed below.
- Provide and install new control points and integrate existing systems per attached points list
    - **New Points of Control:**
        - Control (23) VAV boxes
        - Control (18) Dual Temp Coil Valves
        - Control (6) Chilled Water Coil Valves
        - Control (4) Chilled Water System Valves

Programmable Thermostats

- Provide and install (2) new touchscreen, Wi-Fi capable, Universal Programmable Thermostats (Honeywell WiFi Focus Pro TH6320WF1005 or similar) with secure maximum setpoint limits to control the existing furnaces that serve the City Hall Annex Garage.
    - Reuse existing control wiring where feasible.
    - Provide programming of all operation schedules per Ameresco/ City's specifications.

Police Court

Provide and Install a new Open Protocol Web Accessible Direct Digital Control (DDC) System that will integrate the existing Barber Colman system. A new TAC I/A Series ENC-520 Enterprise Network Controller running the latest version of the Niagara AX framework will replace the existing Invensys GCM front end. The EMS scope of work for this building includes the following:

- Provide and install a new JACE running on the latest version of Tridium's NiagaraAX at the time of construction with all updates provided until the date of acceptance.
- Provide new Supervisory Controller including open license having no expiration (Ameresco OrgId must be added at time of licensing).
- Perform point by point inspection of existing control system including terminal units and provide a report listing any deficiencies.
    - Existing damper actuators, control valves, and other control devices found to be deficient are not to be replaced unless specified in scope of work
    - Provide all category 5e communication wiring from new FX to customer network closet

"Page content is subject to Confidentiality Restrictions"

- Provide programming of all points, graphics and control sequences for each piece of equipment controlled.
- Set up trends and alarms per Ameresco/City's specifications
- **New Points of Control:** Six (6) additional control points (see below)
- **Existing Points of Control to be Integrated:** Existing Barber Colman EMS
  Existing Points of Control to be Modified: Implement Space Temperature and Occupancy Schedules, Implement Optimum Start

Pneumatic to DDC Conversion

- Demo and remove the existing pneumatic controls including valve actuators. Where possible existing valves will be retrofit with electronic actuators. In some cases the entire valve may need to be replaced.
- The Police Court will receive an additional 6 control points.
- Replacement of 6 pneumatic zone valves located in the boiler room with electronic equivalents.
- Provide and install new control points and integrate existing systems
  - **New Points of Control:**
    - Control (6) zone valves

Dennis Malone Aquatic Center

The Dennis Malone Aquatic Center will receive an Open Protocol Web Accessible Direct Digital Control (DDC) System encompassing approximately 59 new hardware points. New building-level, open-protocol, DDC controllers will be installed and tied into the central EMS. The proposed EMS scope of work for this building includes the following:

- Provide and install a new JACE running on the latest version of Tridium's NiagaraAX at the time of construction with all updates provided until the date of acceptance.
- New JACE to come with open Tridium license having no expiration (Ameresco OrgId must be added at time of licensing).
- Reuse existing damper actuators and control valves.
- Provide all category 5e communication wiring from new Supervisory Controller to customer network closet.
- Provide all communication wiring between all new field controllers and new Supervisory Controller for a complete and operating system.
- Provide programming of all points, graphics and control sequences for each piece of equipment controlled (see attached points list).
- Set up trends and alarms per Ameresco/City's specifications.
- **New Points of Control:**
  - Provide (1) Outdoor Air Temperature/Humidity Sensor
  - Control (1) Hot Water Boiler & (2) Circulators
  - Control (1) Pool Water Boiler & Pump
  - Control (1) Dehumidifying Pool Heater Unit w/ Electric Reheat
  - Control (4) Finn Tube Baseboard Control Valves

"Page content is subject to Confidentiality Restrictions"

- Control (2) Fan Coil units serving the Lobby
- Control (6) Exhaust Fans
- Control (1) Domestic Water Indirect System and Circulating Pump
- Control (1) DX Condensing Unit

Beals Senior Center

The Senior Center currently utilizes a Johnson Controls Metasys control system to control the HVAC equipment in the building. The Senior Center will receive a new Open Protocol Web Accessible Direct Digital Control (DDC) System that will integrate with the existing JCI Metasys system. A new TAC I/A Series ENC-520 Enterprise Network Controller running the latest version of the Niagara AX framework will integrate the existing Metasys NAE front end. The proposed EMS scope of work for this building includes the following:

- Provide and install a new JACE running on the latest version of Tridium's NiagaraAX at the time of construction with all updates provided until the date of acceptance.
- Provide new Supervisory Controller including open license having no expiration (Ameresco OrgId must be added at time of licensing).
- Perform point by point inspection of existing control system including terminal units and provide a report listing any deficiencies.
  - Existing pneumatic damper actuators and control valves are to remain.
  - Existing damper actuators, control valves, and other control devices found to be deficient are not to be replaced unless specified in scope of work
  - Provide all category 5e communication wiring from new FX to customer network closet
- Provide programming of all points, graphics and control sequences for each piece of equipment controlled.
- Set up trends and alarms per Ameresco/City's specifications
- **New Points of Control:** None
- **Existing Points of Control to be Integrated:** Existing JCI EMS
  Existing Points of Control to be Modified: Implement Space Temperature and Occupancy Schedules, Implement Optimum Start

Main Library

The Main Library will receive a new Open Protocol Web Accessible Direct Digital Control (DDC) System that will integrate with the existing Invensys I/A Series. A new TAC I/A Series ENC-520 Enterprise Network Controller running the latest version of the Niagara AX framework will replace the existing Invensys GCM front end. The proposed EMS scope of work for this building includes the following:

- Provide and install a new JACE running on the latest version of Tridium's NiagaraAX at the time of construction with all updates provided until the date of acceptance.
- Provide new Supervisory Controller including open license having no expiration (Ameresco OrgId must be added at time of licensing).

- Perform point by point inspection of existing control system including terminal units and provide a report listing any deficiencies.
    - Existing pneumatic damper actuators and control valves are to remain.
    - Existing damper actuators, control valves, and other control devices found to be deficient are not to be replaced unless specified in scope of work
    - Provide all category 5e communication wiring from new FX to customer network closet
- Provide programming of all points, graphics and control sequences for each piece of equipment controlled.
- Set up trends and alarms per Ameresco/City's specifications
- **New Points of Control:** None
- **Existing Points of Control to be Integrated:** Existing Barber Colman EMS
- **Existing Points of Control to be Modified:** Implement Space Temperature and Occupancy Schedules, Implement Optimum Start

Manross Library

The Manross Library will receive a new Open Protocol Web Accessible Direct Digital Control (DDC) System that will integrate with the existing Invensys I/A Series and Pneumatic system. A new TAC I/A Series ENC-520 Enterprise Network Controller running the latest version of the Niagara AX framework will replace the existing Invensys front end. The proposed EMS scope of work for this building includes the following:

- Provide and install a new JACE running on the latest version of Tridium's NiagaraAX at the time of construction with all updates provided until the date of acceptance.
- Provide new Supervisory Controller including open license having no expiration (Ameresco OrgId must be added at time of licensing).
- Perform point by point inspection of existing control system including terminal units and provide a report listing any deficiencies.
    - Replace existing pneumatic damper actuators and control valves with electronic equivalents
    - Provide all category 5e communication wiring from new FX to customer network closet
- Provide programming of all points, graphics and control sequences for each piece of equipment controlled.
- Set up trends and alarms per Ameresco/City's specifications
- Provide and install new control points and integrate existing systems per attached points list
- The Manross Library will receive an additional 44 control points.
    - **New Points of Control:**
        - Provide (1) Outdoor Air Temperature/Humidity Sensor
        - Control (1) Hot Water Boilers
        - Control (1) Air-Cooled Condensing Unit
        - Control (16) PTAC Units
        - Control (2) Hot Water Baseboard Valves
- **Existing Points of Control to be Integrated:** Existing Barber Colman EMS

"Page content is subject to Confidentiality Restrictions"

- **Existing Points of Control to be Modified:** Implement Space Temperature and Occupancy Schedules, Implement Optimum Start

Youth Services

The Youth Services Building will receive a new Open Protocol Web Accessible Direct Digital Control (DDC) System that will integrate with the existing Invensys I/A Series and Barber Colman system. A new TAC I/A Series Enterprise Network Controller running the latest version of the Niagara AX framework will replace the existing Invensys front end. The proposed EMS scope of work for this building includes the following:

- Provide and install a new JACE running on the latest version of Tridium's NiagaraAX at the time of construction with all updates provided until the date of acceptance.
- Provide new Supervisory Controller including open license having no expiration (Ameresco OrgId must be added at time of licensing).
- Perform point by point inspection of existing control system and provide a report listing any deficiencies.
    - Existing pneumatic damper actuators and control valves are to remain.
    - Existing damper actuators, control valves, and other control devices found to be deficient are not to be replaced unless specified in scope of work
    - Provide all category 5e communication wiring from new FX to customer network closet
- Provide programming of all points, graphics and control sequences for each piece of equipment controlled.
- Set up trends and alarms per Ameresco/City's specifications
- **New Points of Control:** None
- **Existing Points of Control to be Integrated:** Existing Barber Colman EMS
  Existing Points of Control to be Modified: Implement Space Temperature and Occupancy Schedules, Implement Optimum Start

Detailed Scope of Work – General

General

- All vertical communication wiring runs to be in wall where possible or wire mold were necessary
- Horizontal communication wiring runs to be above ceiling where possible
- Horizontal communication wiring to be plenum grade
- Horizontal communication wiring runs to be tie wrap

Expand DDC EMS

- Provide and install one (1) new Tridium AX Supervisor workstation server (with 24" monitor) with open Tridium license having no expiration (Ameresco OrgId must be added at time of licensing), latest version of Windows operating system, latest version of MS Office and all other necessary software required for programming the JACEs, printing reports and alarms and storing trend data

  - New Supervisor to come with open Tridium license having no expiration (Ameresco OrgId must be added at time of licensing)
  - Provide program software
  - New Supervisor to be installed in an existing server closet to be determined by the City
- Move all existing graphics from the existing systems to the new Supervisor workstation
  - Reuse existing graphics where possible and remap points as necessary
  - Create a new, user friendly, floor plan graphic to replace the existing for building navigation
- All new controllers to be LON or BACnet certified
  - Provide and install all required software/hardware required to program the new controllers including indefinite site license. (to be installed on supervisor workstation)
  - Same manufacture and line of LON or BACnet controllers must be used for all new controls

Exclusions

- Proposal is based on all existing DDC controllers, wiring, and end devices that are to be reused properly functioning.
  - We have not carried any allowance to replace existing to be reused controllers.
- Proposal is based on all pneumatic end devices that are to be reused properly functioning (damper actuators, heating valves and bypass valves).
- Proposal is based on any devices that are found in need of repair or replacement during system checkout will be identified. A separate proposal will be created for these corrections.
- Proposal is based on reusing existing temperature wells and if not available/compatible strap-on temperature sensors shall be provided.
- Proposal excludes painting and patching.
- Proposal excludes any asbestos or hazardous material abatement
- Network connections and static IP addresses shall be provided by the City for both the JACE's and connection between the JACE's and AX Server.
- Proposal is based on Ameresco having remote access to these DDC systems during the warranty period.

General Zone and Special Area Event Scheduling

Ameresco proposes to provide operating schedule software for all controlled spaces. For example, during unoccupied periods, areas can be maintained in unoccupied status. This software will permit complicated event scheduling for specifics zones in any building. For example, an "auditorium event" will schedule auditorium air handling units on for the occupied periods only while the remainder of the building is in unoccupied mode.

Optimum Start/Stop of HVAC Equipment

Ameresco proposes to implement optimum start/stop of HVAC Equipment. System energy will be saved if occupied zone temperature is conditioned to its set point as close to the beginning of the occupancy period as possible. For example, if the occupied zone set point is 70°F and one hour is required to "pull the temperature up" to set point from the unoccupied temperature, the start time of HVAC equipment shall be

"Page content is subject to Confidentiality Restrictions"

delayed until one hour before the occupied period. This optimum start time of HVAC equipment is a function of the building characteristics, set points and ambient conditions. The EMS will create a database of measurements for the facility from which an optimum start time will be automatically determined for each day. Similarly, the stop time of HVAC equipment will be determined from this database.

Unoccupied Zone Temperature Reset

Ameresco proposes to fully implement unoccupied zone temperature reset. Zone temperature set points will be varied based on occupancy schedules. Unoccupied zone temperature reset is currently implemented by existing control systems, and will be implemented for existing pneumatic systems. The addition of numerous DDC temperature sensors in all buildings will permit more accurate temperature control. More accurate sensing and control will permit maximum unoccupied reset savings. The following table lists the proposed set points. These set points are proposed for all unoccupied periods.

Building	Occupied Set Point Heating (ºF)	Occupied Set Point Cooling (ºF)	Unoccupied Set Point Heating (ºF)	Unoccupied Set Point Cooling (ºF)
City Hall Annex Bldg	70.0	74.0	55.0	85.0 or off
Police Court	70.0	74.0	55.0	85.0 or off
Malone Aquatic Center	83.0	83.0	83.0	85.0 or off
Beals Senior Center	72.0	74.0	55.0	85.0 or off
Main Library	72.0	74.0	55.0	85.0 or off
Manross Library	70.0	74.0	55.0	85.0 or off
Youth Services Building	68.0	74.0	55.0	85.0 or off

Occupied Scheduling

Ameresco will initially setup the occupancy schedules in the EMS to reflect the major occupancy schedule of the buildings. The HVAC systems will only be operated when the buildings are supposed to be occupied. Other areas of the buildings like offices, conference rooms, gymnasiums and auditoriums can have longer schedules to reflect occupancy outside of the normal schedules; a temporary override will need to be activated to provide after-hours conditioning of various office spaces. The table below lists the proposed time schedules. The vacation schedule will also be initially setup in the system to turn off equipment on vacation days. The City will be responsible for updating the vacation and special days schedule to ensure the systems are not operating when the buildings are not occupied. An optimum start sequence will be programmed to ensure the building is at setpoint for the desired start times. Refer to the optimum start discussion below for more details. The majority of the Police Court building is occupied 24/7, however, the 2nd Floor Court area has HVAC equipment scheduled from 6:00am to 11:00 pm Mon-Friday, this schedule will remain.

Building	Start time (Mon – Fri)	Stop time (Mon – Fri)	Weekends/ Holidays	Period
City Hall	8:00am	8:00pm	Off	Year-round
Police Court Bldg	24/7 Court Area (6am)	24/7 Court Area (11pm)	24/7 Off	Year-round Year-round
Malone Aquatic Center	24/7	24/7	24/7	Year-round
Beals Senior Center	8:00am	5:00pm	Off	Year-round
Main Library	8:30am	8:00pm	Sat 8:30am-5:00pm	Year-round
Manross Library	Mon-Thu 10:00am Fri – 9:00am	Mon-Thu 8:00pm Fri-5:00pm	Sat 9:00am-5:00pm	Year-round

"Page content is subject to Confidentiality Restrictions"

Building	Start time (Mon – Fri)	Stop time (Mon – Fri)	Weekends/ Holidays	Period
Youth Services Building	8:30am	Mon/Wed/Fri 5:00pm Tue/Thu 8:00pm	Off	Year-round

Boiler and Pump Control Sequences

Hot water boilers and pumps will be enabled based on both an operating schedule and an outdoor temperature setpoint. During normal operation the boilers and pumps will only be enabled whenever any of the heating related zones are occupied, i.e., classrooms, gymnasiums, etc., and the outside air temperature is less than or equal to 60° (adjustable). During unoccupied periods the boilers and pumps will be off unless the outside air temperature is less than or equal to 37.5°, at which time the boilers will maintain a lower hot water loop temperature and the pumps will be operated continuously to prevent frozen coils. If the pumps are driven by VFDs then they will be operated at the minimum design flow rate and all hot water coils will be commanded open.

For steam boilers the occupied period operation will be similar to the hot water sequence above. When the unoccupied outside air temperature is less than or equal to 37.5°the boilers will maintain the steam header setpoint.

Fault and Exception Alarming

Ameresco proposes to provide fault or exception alarming for HVAC equipment. Equipment operation status will be proved by sensors operation; a commanded "ON" will result in a proved "ON" or an alarm will be generated. An alarm list will be maintained in a database to provide maintenance information to operators in real time. Operators will save significant time by addressing needs as indicated by the EMS. During non-working hours the EMS will have the capability of paging operators automatically to announce system faults.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

The installation of remotely-accessible energy management systems will improve comfort, reduce energy use and cost, and reduce on-site man-hours by specialized maintenance personnel.

Powered by Niagara AX FRAMEWORK®

THE NIAGARA AX FRAMEWORK®

Creating Intelligent, Energy-Efficient Buildings

Commercial and industrial buildings use about 40% of the energy consumed in the United States and 72% of the nation's electricity. Buildings and facilities account for 80% of all electric expenditures.

THE NIAGARA^{AX} FRAMEWORK®

Intelligent Energy Management Technology for Managing, Controlling and Reducing Energy Costs.

Energy costs represent huge expenses for any organization. As energy use and costs continue to increase in this challenging environment, so does the responsibility of building owners and managers to address energy efficiency and energy conservation within their organization. Controlling energy costs and environmentally sound energy use is paramount today.

Smart energy management solutions control and manage energy-consuming systems in facilities such as HVAC, lighting, etc. In addition, these solutions also ensure these systems operate properly and are optimized for maximum performance and energy efficiency that result in lower energy bills.

Perhaps no other technology has had as profound an impact on smart energy solutions and making buildings more energy efficient than the Internet. At the forefront, driving this technology is the Niagara^{AX} Framework.®

Built on an open architecture, the Niagara^{AX} Framework merges multi-vendor automation systems and real-time integration into a single, extensible platform that monitors, manages and controls the power consumption of all building systems, drives energy efficiency and reduces energy costs. Niagara^{AX} takes into account all critical areas that form the subsystems that make a building function including lighting, heating, ventilation and air-conditioning (HVAC), security and energy management. It allows devices to share information with each other and streamlines them into a common system where management can control and monitor the buildings' operations. Niagara^{AX} is ideal for both small and large organizations as well as campuses and geographically dispersed enterprises.

In addition to integrating energy consuming devices and systems, Niagara^{AX} also includes energy management verification tools that allow users to implement the most efficient and sustained energy strategies.

The technology also enables you to collect information and benchmark buildings to expose operational inefficiencies and facilitate solutions. From a green building perspective, Niagara^{AX} allows you to capitalize on accurate and concise intelligence relating to the energy performance of a building in order to achieve lower energy consumption, enhanced efficiencies and lower carbon emissions.

Today, there are over 140,000 instances of Niagara^{AX} operating in more than 43 countries worldwide in office buildings, manufacturing plants, mission-critical facilities, hospitals, educational and government campuses, military bases, hotels, retail stores and airports.

Buildings are an integral part of our nation's new energy system. From being a consumer of energy to being the facility that houses much of our energy systems, it will be difficult to uncouple building systems from the rest of the future of smart energy solutions.

Niagara^{AX} Creates Better Buildings — by integrating today's diverse building systems such as environmental controls, security, lighting, energy, fire and life safety. The Niagara^{AX} Framework is creating better buildings — ones that are smarter, use less energy, are more efficient, have lower operating costs, are safer and contribute to a sustainable environment.

Niagara[AX] allows buildings to automatically recognize when employees arrive, by the swipe of an access card, and turn on the lights and environmental controls in only the selected and occupied part of the building. Doing so can contribute to a savings of up to 15% in the energy bill.

Real-World Applications

Retail

Upscale Retailer

An upscale retailer with multiple locations and regional offices is using a Niagara[AX]-based energy management system for controlling costs; monitoring fuel usage and sub-metered loads for high energy use equipment; and receiving energy savings from more efficient operation of the store's equipment and limiting usage during peak rate periods. Within 24 months, they've experienced more than $8 million in energy savings.

Convergence Retailer

By using energy data generated by Niagara[AX] to determine future equipment selection and store design as well as shaping loads to reduce power costs, a major convergence retailer with 550 locations is reducing energy usage and receiving cost savings of 10 – 12%.

Education

K-12

A 10,000-acre K-12 school system had three classroom buildings, 109 student homes, a performing arts center and more with their own controls and devices, and no central monitoring or system. By uniting the campus through a Niagara[AX]-based energy management system, monitoring and control became much more efficient and the school system reduced its annual utility spend by over 25%.

University

A leading university with outdated HVAC equipment in many of its buildings was very limited in its ability to monitor and manage energy usage. Through a Niagara[AX]-based energy management system, the university integrated cost-effective control upgrades into one system, achieved the Web-based management it desired, and lowered its monthly utility costs by 20%.

Office Buildings

Using Niagara[AX], a multi-site, multi-location, national financial institution gained savings of 10-15% — translating to millions of dollars annually — within one year. Energy consumption and Greenhouse Gas Emissions have decreased by 11% and maintenance costs have been cut by 12%. In addition, the institution is enjoying reduced service calls, fewer truck rolls and an increase in performance of HVAC and lighting systems.

Manufacturing

Aerospace

A large aerospace company not only wished to reduce energy costs in its production facility, but also had specific needs for managing flexible lighting zones for a safe working environment. The chosen Niagara[AX]-based energy management system provided Web-based control for managing lighting and environmental schedules as well as load shedding during peak periods. The result was reduced electric consumption by 20% during peak usage and 50% on weekends.

Pharmaceutical

Integration of multiple systems and meters through a single Web-based interface was a requirement for a large pharmaceutical company, as was a tool for shedding loads and verifying reductions. Through the updated Niagara[AX]-based energy-management system, the company integrated legacy systems with new BACnet® systems for real-time control from any onsite Web browser. The company can now shed a 1.5 MW load within 30 minutes and has measurement and verification tools in place to better manage and control energy use.

Government

Managers of government buildings are receiving real-time energy and operational data and sending commands to and from different devices so they can take immediate action — managing energy consumption and reducing costs — from anywhere. They are reducing energy costs by an average of 15% per building.

TRIDIUM®

About Tridium, Inc.

Tridium is the global leader in application software frameworks, automation infrastructure technology and device-to-enterprise integration solutions. Our technologies extend connectivity, integration and interoperability to the millions of devices deployed in the market today.

The Niagara^{AX} Framework® is the leading software platform that integrates diverse systems and devices, regardless of manufacturer or communication protocol, into a unified platform that can be easily managed and controlled in real time over the Internet using a standard browser.

Today, there are over 140,000 instances of Niagara^{AX} operating in 43 countries in applications that include: energy and sustainability management, intelligent building automation, M2M, telecommunications, security automation, lighting control, home automation, convergence retailing and smart facilities management. Niagara^{AX}-based solutions make buildings better — ones that use less energy, have lower operating costs, are safer, contribute to sustainable environments and deliver significant ROI.

The Sedona Framework™ is a software platform for developing, deploying, integrating and managing pervasive device applications at the lowest level. The Sedona Framework distributes decision-making control and manageability to any device and brings intelligence and connectivity to the network edge and back.

TAC I/A Series

Building Automation System

Intelligent Building Automation Solutions

Make the most of your energy

Schneider Electric

TAC I/A Series: Open....interoperable...scalable...extensible

The TAC I/A Series® Building Automation System is Intelligent Automation for every type and size facility. Delivering an open interoperable solution through the power of the Internet, the I/A Series provides full access and control of your building from anywhere in the world. Only I/A Series is:

Open and Interoperable

I/A Series fully supports LON®, BACnet™, OPC®, and Modbus®, and is powered by the Niagara Framework®.

- Internet browser support. Thin client Internet Explorer™ and Netscape™ supported for unlimited users.
- Control and monitoring. Complete day-to-day access or system management and/or monitoring.
- Data collection. Real time, historical, and dynamic creation for custom requirements.
- Alarm management. Sophisticated alarm processing and routing including e-mail, paging, and cell phone capability.
- Scheduling. Graphical calendar, event, and holiday scheduling available across platforms.
- Reporting. Dynamic creation of custom reports with simplified cataloging as masters.
- Database Change Recording. Audit Trail functionality provides for full details on who has accessed the system, when, and what activities occurred.
- Database Programming. Complete access to all supported platforms.
- Security. Password protection and security using standard Java authentication and encryption techniques.

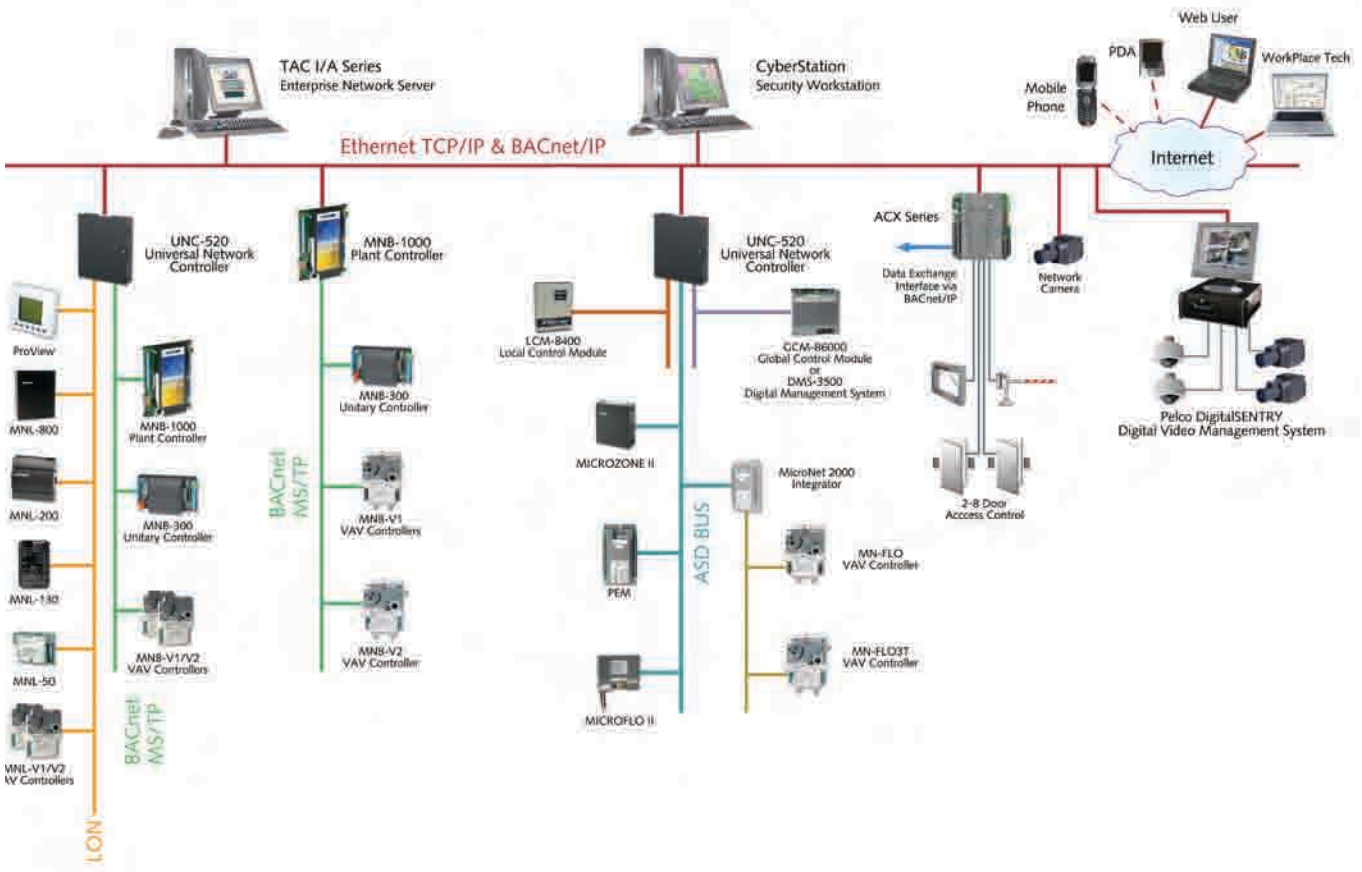
Web Powered

The I/A Series is designed from the ground up as a Java based web enabled product family. Thin client, pure browser access for any size project.

Full Range of Control Solutions

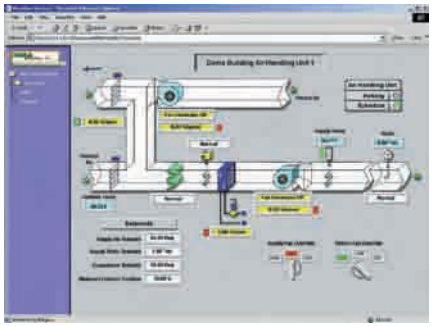
The MicroNet series of controllers offers the most complete line of fully programmable, open protocol controllers.

Innovative Design

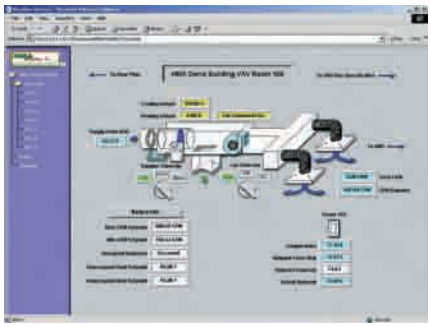


Industry leading family of intelligent temperature and humidity sensors—the S-Link series.

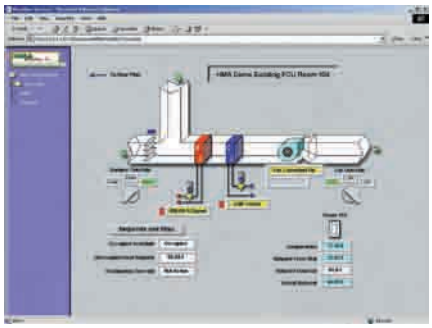
Investment Protection



Brings the Internet to NETWORK 8000™ and DMS™ building automation systems.



TAC I/A Series guarantees compliance today, with the standards of tomorrow. From sensor to boardroom, and everywhere in between, the I/A Series can satisfy all of your enterprise control requirements well into the future.



Integrated TAC I/A Series® Architecture

Access & Control Anywhere in the World

Wi-Fi FocusPRO®

Honeywell

Reliable Connection and Added Value in One Powerful Thermostat

Wi-Fi FocusPRO®

THE MOST VALUABLE THERMOSTAT ON YOUR TRUCK…

The perfect blend of reliable design and attractive pricing makes the Honeywell Wi-Fi FocusPRO® an outstanding value. You can offer your customers the performance and ease of use that have made FocusPRO so popular, with the wireless connectivity expected in today's "connected" world.

The Wi-Fi FocusPRO works seamlessly with Honeywell's My Total Connect Comfort Services. Your customers will enjoy being able to monitor and control their home's comfort settings from anywhere at anytime. You'll be giving them the power of connection and maximized comfort while also optimizing your profitability.

EASY INSTALLATION AND SETUP

The Wi-Fi FocusPRO installs just like standard FocusPRO models, so you'll breeze through the familiar installation. After that, it's just a simple matter of a few easy steps to set up the remote access for use with a computer, smartphone or tablet.[1] All the homeowner needs is access to their home network, and a computer or device with access to mytotalconnectcomfort.com. The connection is quick and easy.

[1]Free apps are available for Apple iPhone, iPad and iPod and Android devices. Check www.mytotalconnect.com for more mobile applications coming soon.

For assistance with the Wi-Fi enrollment or total connect registration, please view the following videos:
http://youtu.be/3IGiRfWJA6c | **http://youtu.be/mc9eevhs-Qg**

PACKED WITH FEATURES.

Including Built-In Wi-Fi

ENERGY SAVINGS
Program to save up to 33% on annual heating and cooling costs.[2]

PRECISE COMFORT CONTROL (+/-1º F)
Maintains consistent comfort to the highest level of accuracy.

GET CONNECTED
Connect to the home's existing wireless system.

REMOTE ACCESS
Easily manage your energy usage by remotely adjusting your thermostat while you're away.

LARGE, CLEAR BACKLIT DIGITAL DISPLAY
Easy to read in various lighting conditions.

UNIVERSAL APPLICATION
Works on all system types up to 3H/2C Heat Pump and 2H/2C Conventional.

REMOTE CONTROL
Convenience, comfort and control from anywhere through web, tablet or smartphone access.

REAL-TIME CLOCK
Keeps time during power failure and automatically updates for daylight savings.

7-DAY PROGRAMMABLE OR NON-PROGRAMMABLE

5-YEAR WARRANTY

[2]When used as directed, programmable thermostats can save up to 33% on annual heating and cooling costs. Savings may vary depending on geographic region and usage.

DON'T JUST CONNECT. TOTAL CONNECT.

Once your customers are registered to Honeywell's My Total Connect Comfort, they'll have a world of comfort control at their fingertips like never before. They'll be able to customize their system and alert settings, download free mobile apps and more at the Total Connect web portal.

Just as the Wi-Fi FocusPRO delivers a reliable Wi-Fi connection, Total Connect delivers a wide range of reliable services from any connected device. Your customers will be able to:

- View and change their HVAC system settings (Heat, Cool, Off, Auto, Fan, EM Heat)
- View and set the temperature
- Access multiple thermostats if the system is zoned
- Access multiple locations if more than one system is connected
- Receive temperature alerts via e-mail or app
- Get automatic upgrades as new features are available
- Schedule remotely via the web

Built on the same platform as the #1 residential thermostat, FocusPRO gets connected. Millions of homes today are equipped with Wi-Fi enabled devices touching every corner of a homeowner's life on a daily basis. This translates into a great upsell opportunity for you. Conscientious homeowners who want a simple way to remotely monitor and help manage their energy costs will have peace of mind with this Wi-Fi thermostat offering from Honeywell. And, they will have you to thank.

Wi-Fi FocusPRO®

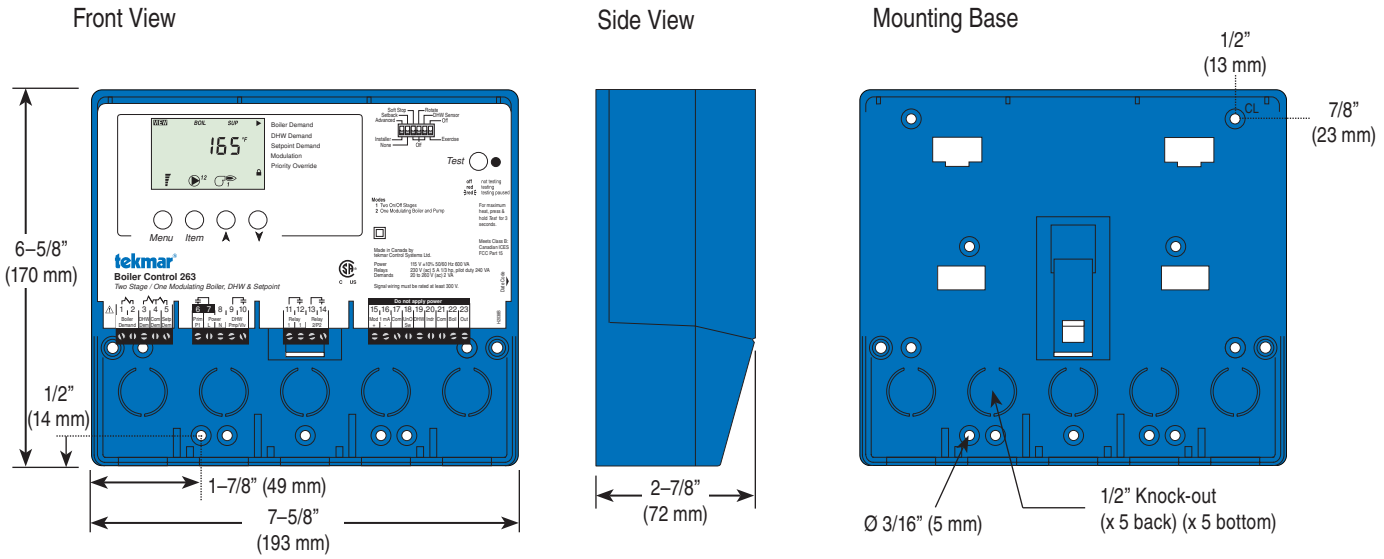
Boiler Control 263



Multi-Staging

C 263
01/11
Replaces: New

Job _____ Designer _____ Contact _____

The Boiler Control 263 is designed to stage multiple boilers or operate a modulating boiler using Outdoor Temperature Reset. It can be used in applications ranging from a single zone of baseboard, multiple baseboard and fan coil zones, to dedicated Domestic Hot Water heating in commercial buildings. This control regulates a single heating water temperature through Outdoor Temperature Reset, setpoint, and DHW target control. It is capable of controlling (stage and rotate) up to 2 on/off boilers, a single 2 stage boiler, or 1 modulating boiler as well as the system pump.

Specifications

Boiler Control 263 *Two Stage / One Modulating Boiler, DHW & Setpoint*	
Literature	D263, A263, D001, D070
Control	Microprocessor control. This is not a safety (limit) control
Packaged weight	3.3 lb. (1550 g)
Dimensions	6-5/8" H x 7-9/16" W x 2-13/16" D (170 x 193 x 72 mm)
Enclosure	Blue PVC plastic, NEMA type 1
Approvals	CSA C US, meets Class B: ICES & FCC Part 15
Ambient conditions	Indoor use only, 32 to 122°F (0 to 50°C), RH ≤90% Non-condensing, Altitude <6560 ft. (2000 m), Installation Category II, Pollution Degree 2
Power supply	115 V (ac) ±10%, 50/60 Hz, 600 VA
Relay capacity	230 V (ac) 5 A, 1/3 hp, pilot duty 240 VA
Modulation output	0-20 mA / 4-20 mA (up to 1000 Ω load)
Demands	20 to 260 V (ac) 2 VA
Sensors	NTC thermistor, 10 kΩ @ 77°F (25°C ±0.2°C) ß=3892
–Included	Outdoor Sensor 070 and Universal Sensor 082, 500 Ω Resistor
–Optional	tekmar type #: 033, 071, 076, 077, 078, 082, 084
Warranty	Limited 3 Year (See D263 for full warranty)

Energy Saving Features

- Outdoor Temperature Reset
- Setback input for energy savings
- Warm Weather Shut Down
- Automatic Boiler Differential

Additional Features

- 1 modulating or 2 stage boiler control
- Pump and valve exercising
- DHW pump or valve operation
- Optional DHW priority
- Quick Setup for easy installation and programming of control
- User comfort adjustment to increase or decrease building space temperature
- Advanced settings to fine-tune building requirements
- Powered boiler pump output
- Test sequence to ensure proper component operation
- 115 V (ac) power supply

ESM 6:
Demand Control Ventilation

ESM Overview

Figure 6.1: DCV controls are being proposed at a number of high density spaces like the Eastern High Gym.

Ameresco identified energy saving opportunities in a number of the School and City buildings through the installation of demand control ventilation (DCV) controls. DCV controls modulate the amount of outdoor air supplied to a space to maintain a required ventilation rate (CFM/person) based on the actual occupancy at that time. This strategy saves energy by reducing the amount of outdoor air that is conditioned during low occupancy periods. The sixteen (16) AHU's identified for this measure are listed in the table below. New CO_2 sensors will be installed in the appropriate return air ductwork for each unit. All outdoor air damper actuators will be tested for proper operation (modulating). New CO_2 sensors will monitor CO_2 levels in the spaces and control ventilation rates for each occupied space according to ASHRAE Standard 62 requirements. The sensors will be wired back to existing AHU controllers. The existing controls will be modified and programmed to control the outdoor air dampers via CO_2 levels. The new sensors will have the capability to override the outdoor air dampers based on a CO_2 control algorithm.

New variable frequency drives (VFDs) will be installed on a number of supply and exhaust fans. The new VFDs will provide electrical energy savings and permit ventilation flowrates to be varied based on the occupancy and control set points.

Ameresco proposes to reduce ventilation flow rates during periods of low occupancy. Flowrate overrides will occur as needed to maintain zone temperature set points. The system will be controlled by the EMS.

ESM Detail

Existing System

Ameresco identified sixteen (16) air-handling units (AHUs) at the School and City buildings that can be upgraded with DCV controls. All spaces have a high occupant density that varies throughout the day and all spaces are supplied with a large volume of air.

Proposed System

Ameresco proposes to install demand control ventilation (DCV) on the sixteen (16) AHUs listed in the table above. For all AHU's serving a single zone, the CO_2 sensors will be located in the return air ductwork, and all outdoor air damper actuators will be tested for proper operation (modulating). New CO_2 sensors will be installed to monitor CO_2 levels in the spaces and control ventilation rates for each occupied space according to ASHRAE Standard 62 requirements. The sensors will be wired back to existing AHU controllers. The existing controls will be modified and programmed to control the outdoor air dampers via CO_2 levels. The new sensors will have the capability to override the outdoor air dampers based on CO_2 control algorithm.

Bristol Central High School

Scope of Work:

- Add Demand Control Ventilation (DCV) to control the outside air damper for the following units:
  - AC-1- (Auditorium)
  - HV-12 - (Gym)
  - HV-13 - (Gym)
  - HV-14 - (Gym)
  - HV-15 - (Gym)
- Provide and install a CO_2 Sensor in the return ductwork, for each unit; each sensor will control the outside air damper for the unit associated with that space.
- Provide all necessary programming to integrate into the existing control system.
- Provide new controls and graphics to enable demand control ventilation operation
- Provide and install five (5) new CO_2 sensors to control ventilation air
  - Wall mount unless otherwise specified
- Provide and install VFDs on the four (4) existing exhaust fans serving the Gym
  - Install on wall next to unit
  - Provide with LON interface card and integrate to new EMS
  - Provide with electronic bypass
  - Provide and install all power and control wiring
  - Install one (1) new static pressure sensor in the gym
  - VFDs will be modulated in stages to maintain static pressure in the space

EF-103	2
EF-104	2
EF-105	2

Bristol Eastern High School

Scope of Work:

- Add Demand Control Ventilation (DCV) to control the outside air damper for the following units:
  - AHU-1- (Old Gym)
  - AHU-2- (Old Gym)
  - AHU-3- (Old Gym)
- Provide and install a CO_2 Sensor in the return ductwork, for each unit; each sensor will control the outside air damper for the unit associated with that space.
- Provide all necessary programming to integrate into the existing control system.
- Provide new controls and graphics to enable demand control ventilation operation

Chippens Hill Middle School

Scope of Work:

- Add Demand Control Ventilation (DCV) to control the outside air damper for the following units:
  - RTU-6- (Gym)
  - RTU-7- (Gym)
  - RTU-8- (Gym)
- Provide and install a CO_2 Sensor in the return ductwork, for each unit; each sensor will control the outside air damper for the unit associated with that space.
- Provide all necessary programming to integrate into the existing control system.
- Provide new controls and graphics to enable demand control ventilation operation

South Side Elementary

Scope of Work:

- Add stand-alone Demand Control Ventilation (DCV) and air-side economizer control to the existing pneumatic outside air dampers for the following units:
  - HV-1- (Gym)
  - HV-2- (Gym)
  - HV-3- (Cafe)
- Provide and install new outdoor air sensor
- Provide and install a CO_2 Sensor in the return ductwork, for each unit; each sensor will control the outside air damper for the unit associated with that space.
- Provide new stand-alone controller for each unit including P-I transducers and programming to enable demand control ventilation and air-side economizer operation.

"Page content is subject to Confidentiality Restrictions"

City Hall

Scope of Work:

- Provide new controls and graphics to enable demand control ventilation operation
- Provide and install one (1) new CO_2 sensor to control ventilation air
  - Wall mount unless otherwise specified

Fan No.	Serves	Quantity of CO sensors
AHU-4	Council Chambers	1

  - Provide and install VFDs for the existing unit
    - Install on wall next to unit
    - Provide with LON interface card and integrate to new EMS
    - Provide with electronic bypass
    - Provide and install one (1) new duct static pressure sensor in supply ducting.
    - Provide and install all power and control wiring

Fan No.	HP
AHU-4 Supply	3

Police Court Building

Scope of Work:

- Add Demand Control Ventilation (DCV) to control the outside air damper for the following unit:
  - **HVAC-4** – Serving Court #1, Court #2, and Jury Assembly Room
- Provide and install three (3) CO_2 Sensor on the walls of each space; the space registering the highest CO2 will control the outside air damper for the unit.
- Provide all necessary programming to integrate into the existing control system.
- Provide new controls and graphics to enable demand control ventilation operation

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

The new DCV controls will reduce the over-ventilation of high volume spaces by providing the required amount of air based on actual occupancy. This strategy will save energy by reducing the amount of outdoor air that is conditioned during low occupancy periods.

GREYSTONE

ACCURACY BY DESIGN

CARBON DIOXIDE (CO2) DETECTORS

Corporate Space Enclosure

Air quality starts with sensing the problem

Greystone's Carbon Dioxide (CO2) detectors provide unsurpassed accuracy, reliability and selection.

Peace of mind through reliable gas sensors

GREYSTONE IS AN ISO 9002 REGISTERED COMPANY

CO_2 DETECTOR

Environmental, industrial and commercial indoor Carbon Dioxide (CO_2) gas detector. Available in both a space and duct mount version.

Duct Mount ABS Enclosure with Sampling Tube

APPLICATION:
To sense and transmit to any compatible electronic analog control, DDC/PLC controller or automation system for the control of ventilation equipment. Designed to meet ventilation requirements specified in ASHRAE Standard 62-1989.

FEATURES:

- Setup/calibration fully menu driven (requires LCD option)
- Monitors CO2 over range 0-2000 PPM (factory default)
- Field adjustable range from 0-1500 PPM up to 10,000 PPM without re-calibration!
- NDIR single beam with patented ACLP self-calibration algorithm
- Guaranteed 5 year calibration interval
- Optional on board relay with field adjustable trip point
- Optional LCD for displaying PPM level and menu options
- Powered by either AC or DC source with no change to circuit required
- Choice of two field adjustable analog output signals, linearized over full range
- Easy to calibrate in the field

SPECIFICATIONS	**CO_2 DETECTOR – Product # CDD**
Gas Detected	Carbon Dioxide (CO_2)
Range	0 – 2000 ppm standard, programmable from 1500 up to 10,000 ppm in 500 ppm increments
Standard Accuracy	±75 PPM or3% of reading (whichever is greater) 15-32 C (59-90 F) for 0-2000 ppm range ±5% of reading for 2000-10,000 ppm
Extended Accuracy	±150 ppm or 5% of reading (whichever is greater) 0-50 C (32-122 F) for 0-2000 ppm range ±7% of reading for 2000-10,000 ppm
Sensing Element	Non-Dispersive Infrared (NDIR)
Operation Conditions	0-50C(32-122F), 0-95% RH non-condensing
Repeatability	±20 PPM
Stability	±20 PPM typical, 5 year calibration interval
Manufacturing Process	ISO 9002 certified
Output Signal	4-20 mA active (sourcing), 0-5Vdc and 0-10Vdc, jumper selectable (Note correct part number)
Output Drive Capability	550 ohm max for current output, 10 Kohm min for voltage output
Output Resolution	10 bit PWM
LCD Display (optional)	LCD for displaying PPM level (required for field programming) 1 ppm resolution, 1.1” w x 0.5” h (28 x 13 mm) alpha-numeric 2 line x 8 characters
Field Calibration	Calibration, applying calibration gas standards (Contact Greystone for Calibration kit)
External Dimensions	Corporate Space – 91mm W x 127mm H x 43 mm D (3.6” x 5” x 1.7”) Duct ABS – 124 mm W x 183 mm H x 43 mm D (4.9” x 7.22” x 1.69”)

SPECIFICATIONS (Con't)	CO_2 DETECTOR – Product # CDD
Pressure Dependence	0.13% of reading per mm Hg
Altitude Correction	Programmable from 0-5000 ft in 500 ft increments
Response Time	< 60 seconds for 90% step change
Warm-up Time	< two (2) minutes
Power Supply	20-30 Vac/dc (non-isolated half-wave rectified)
Consumption	80 mA max @ 24 Vdc, 36 mA avg @24 Vdc
Input Voltage Effect	Negligible over specified operating range
Protection Circuitry	Reverse voltage protected and output limited
Optional Relay Output	One Form C contact (N.O. and N.C.), status LED, 5 amps @ 250 Vac, 5 amps @ 30Vdc, p.f. = 1 Relay Trip Point – Programmable 500-1500 ppm in 50 ppm increments Relay Hysteresis – Programmable 25-200 ppm in 25 ppm increments
Programming and Selection	Via internal push-buttons and jumper
Wiring Connections	Screw terminal block (14 to 22 AWG)

ACLP SOFTWARE AND 5 YEAR CALIBRATION GUARANTEE

ACLP SOFTWARE

ACLP (Automatic Calibration Logic Program) software utilizes the computing power in the sensor's on-board micro-processor to remember the lowest CO2 concentration that takes place every 24 hours. The sensor assumes this low point is at outside levels. The sensor is also smart enough to discount periodic elevated readings that might occur if for example a space was used 24 hours per day over a few days. Once the sensor has collected 14 days worth of low concentration points it performs a statistical analysis to see if there has been any small changes in the sensor reading over background levels that could be attributable to sensor drift. If the analysis concludes there is drift, a small correction factor is made to the sensor calibration to adjust for this change.

5 YEAR CALIBRATION GUARANTEE

Based on the results of years of testing of **ACLP** software, Greystone now offers a 5 year calibration guarantee on all its CDD series wall and duct mount sensors used for CO2 based ventilation control when operated in an environment that can utilize **ACLP** software. If the sensor is found to be out of calibration more than 150 ppm as compared to a calibration gas or recently calibrated reference, Greystone will provide a free factory calibration of the sensor if returned to Greystone. This guarantee only applies if the sensor is operated in an environment where inside levels periodically drop to outside concentrations (i.e. during evenings or weekends when there is no occupancy) as is required by **ACLP** software. If a space does not experience a periodic drop to outside levels (e.g. where occupancy is 24 hours, 7 days/week), **ACLP** software should be deactivated off. With **ACLP** deactivated (via menu buttons) calibration may be required every 2 to 3 years.

ESM 12:
Variable Frequency Drives

ESM Overview

Ameresco proposes to install variable frequency drives for the existing fan motors serving AHU-1 at the City Hall and the two (2) space heating pumps serving the Chippens Middle School. The VFDs will be integrated to the new EMS system. The installation of VFDs and controls will allow for modulating with varying load more efficiently than the existing methods of control, which will reduce electrical energy and improve system efficiency.

Figure 12.1: Ameresco proposes to install VFDs on the Supply and Return fan motors serving AHU-1 at the City Hall.

ESM Detail

Existing System

AHU-1 is a constant volume air handling unit at City Hall which serves the interior VAV zones. The supply fan motor is 15 HP and the return fan motor is 7.5 HP. Currently each VAV box utilizes a bypass damper to regulate duct pressure.

Space heating hot water is pumped through Chippens Hill Middle School by two (2) 20 HP pumps located in the boiler room. A differential pressure valve regulates the pressure in the system.

Proposed System

Ameresco proposes to install two (2) variable frequency drives on the AHU-1 fans at City Hall, and two (2) VFDs on the hot water pumps serving the Chippens Middle School. The new VFD's will be integrated with the updated EMS systems. The scope of work includes all mechanical, electrical, and demolition work required to retrofit the motors. The scope of work includes:

Chippens Hill Scope of Work:

- Provide and install two (2) new 20-hp VFDs for existing hot water pumps
  - Install on wall in boiler room next to pumps in place of existing starters
  - Install N2 communications wiring to new drives and integrate into existing EMS
  - Provide with electronic bypass
  - Provide and install all power and control wiring
  - Provide all programming and graphics updates
  - Reuse existing DP sensor
  - Reprogram the existing bypass valve to operate as a backup to the VFDs
  - Replace three (3) 3-way valves serving air handling units with new 2-way valves.

"Page content is subject to Confidentiality Restrictions"

City Hall Scope of Work:

- Provide and install two (2) new VFDs for existing AHU-1
  - Install on wall next to unit
  - Provide with LON interface card and integrate to new EMS
  - Provide with electronic bypass
  - Reuse existing static pressure control
  - Install motor ground rings as required
  - Provide and install all power and control wiring

Fan No.	Fan HP
AHU-1	15
REF-1	7.5

Exclusions

- Replacement of disconnects, breakers, fuses, wiring
- Any belt, sheave, or heater replacement.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

The new VFDs will provide improved temperature control and significantly reduce electrical energy. VFD's will also enable soft start capability, which will reduce power draw spikes and decrease mechanical damage to equipment.

Variable frequency drive
Product overview

One source for engineering, manufacturing and support

EATON
Powering Business Worldwide

A drive for any application

Your application might call for an ultra-compact solution, clean power or future configurability.

Whether it is a standard product from the catalog or a custom-enclosed variable frequency drive (VFD) solution, Eaton delivers. Eaton drives are designed for industrial, HVAC, water/wastewater treatment, machinery OEM and other application demands.

Whether designing a new industrial complex, renovating an existing structure or developing a new machine, Eaton has the right product for your application.

Drive	Applications	Description	Offering/Range		Benefits	Acceptance	Communication Options	Cross-Reference	Enclosure
DC1 	• General-purpose microdrive • Machinery OEM drive	The DC1 VFD is a compact VFD with only 14 basic parameters, SmartWire-DT connectivity and outstanding ease of mounting and installation. The DC1 is perfect for quick commissioning and is ideal for panel builders. This drive supports single-phase motor applications, and detachable terminal blocks make control wiring much easier.	**Single-phase to single-phase** 115V to 0.75 hp 230V to 1.5 hp **Single-phase to three-phase** 115V to 1.5 hp 230V to 5 hp	**Three-phase to three-phase** 230V to 5 hp 480V to 15 hp	**Ease of use**: Only 14 standard parameters for startup—quick commissioning, parameter copy function from drive to drive and PC connectivity via COM-STICK, integrated info card **Space-saving design**: DIN rail mountable, side-by-side mounting, contactor style wiring **Efficiency**: Temperature controlled fan **Rugged and reliable**: Ambient temperature –10°C to +50°C without any derating, high protection degree classes: IP66 for decentralized applications	UL c UL CE RoHS COMPLIANT	• Modbus RTU • CANopen® • SmartWire™	• ABB (ACS 150, 355, 550) • Danfoss (Micro Drive, VLT 2800) • Hitachi (WJ200) • Yaskawa (J1000, V1000) • Lenze (SMD, 8400 BaseLine/StateLine) • Siemens (Micromaster 420, G110, Sinamics G120C) • WEG (CFW-10, CFW-08, CFW-09)	• Open IP20, IP66
DA1 	• High-performance microdrive • Machinery OEM drive	The DA1 VFD is the perfect match for demanding OEM applications. High-performance processor, safe torque off, multiple fieldbus protocols including SmartWire-DT, sensorless vector control and the possibility to operate permanent magnet motors are sure to leave a lasting impression. In addition, detachable terminal blocks make control wiring much easier.	**Single-phase to three-phase** 230V to 3 hp	**Three-phase to three-phase** 230V to 7.5 hp 480V to 15 hp	**Ease of use**: Only 14 standard parameters for startup—quick commissioning, parameter copy function from drive to drive and PC connectivity via COM-STICK, integrated info card **Space-saving design**: DIN rail mountable, side-by-side mounting, contactor style wiring **Efficiency**: Temperature controlled fan **Rugged and reliable**: Ambient temperature –10°C to +50°C without any derating, high protection degree classes: IP66 for decentralized applications, STO, standard brake chopper circuit and RFI	UL c UL CE RoHS COMPLIANT	• DC1 Communications+ • BACnet/IP® • PROFIBUS DP • DeviceNet • EtherNet/IP	• ABB (ACS 150, 355, 550) • Danfoss (Micro Drive, VLT 2800) • Yaskawa (J1000, V1000) • Schneider (ATV 312, 32) • Siemens (Micromaster 420, G110, Sinamics G120C) • Rockwell/Allen-Bradley (PowerFlex Series 4, 40)	• Open IP20, IP66
M-Max 	• General-purpose microdrive	The M-Max™ VFD is a compact microdrive with a broad power range, perfectly suited for machinery applications in many industries: food and beverage, HVAC, packaging, pumping, general machine and more.	**Single-phase to three-phase** 115V to 1.5 hp 230V to 3 hp	**Three-phase to three-phase** 230V to 15 hp 480V to 25 hp 575V to 7.5 hp	**Ease of use**: Startup Wizard, copy/paste tool, local/remote button, programmable multi-function inputs **Space-saving design**: DIN rail mountable, side-by-side mounting, numerous orientations, small footprint **Efficiency**: Average 30% less loss wattage, temperature controlled fan **Rugged and reliable**: High overload rating (CT), conformal coated circuit boards, NEMA® 1 enclosure option, EMC filters, brake chopper circuit, 50°C rating, temperature controlled fan	UL c UL CE IEC RoHS COMPLIANT	• Modbus RTU • PROFIBUS DP • DeviceNet	• ABB (ACS Series 150, 155) • Danfoss (VLT Micro Drive) • Lenze/AC Tech (SC Series, SM Series) • Rockwell/Allen-Bradley (PowerFlex Series 4, 40) • Schneider/Square D (Altivar® Series 12, 312) • Siemens (Micromaster 420)	• Open IP20, IP21 • Open NEMA 1
H-Max 	• HVAC drive	The H-Max™ VFD is specifically designed to meet the needs of the HVAC industry by offering leading HVAC software and hardware features. With an industry-leading energy efficiency algorithm, high short-circuit current rating and robust design, it offers customers increased efficiency, safety and reliability.	—	**Three-phase to three-phase** 230V to 125 hp 480V to 250 hp	**Ease of use**: Startup Wizard, graphic display and keypad, menu-based navigation, copy/paste tool, local/remote button, programmable multi-function I/O, built-in communication protocols (BACnet, Modbus®, N2) **Space-saving design**: Compact design, open NEMA 12 option, onboard I/O expansion provisions **Efficiency**: "Active Energy Control," offering 2–10% energy savings over competition **Rugged and reliable**: 5% DC choke with MOV protection, conformal coated circuit boards, EMC filters	UL c UL CE OSHPD	• Modbus RTU/TCP • BACnet MS/IP • LonWorks®	• ABB (ACH550) • Danfoss (FC-102) • Yaskawa (E7) • Siemens (BT300) • Vacon (100 HVAC)	• Open IP21, IP54 • Open NEMA 1, 12 • Enclosed NEMA 1, 12, 3R • IntelliDisconnect (breaker included) • IntelliPass (bypass included)
SVX 	• General-purpose drive	The SVX VFD is a general purpose, compact, modular solution for variable speed applications and offers a variety of features and application capabilities.	**Single-phase to three-phase** 230V to 40 hp 480V to 60 hp	**Three-phase to three-phase** 230V to 125 hp 480V to 250 hp 575V to 200 hp	**Ease of use**: Startup Wizard, seven built-in applications, local/remote button, modular design, text display **Space-saving design**: Compact design, open NEMA 12 option, onboard I/O expansion provisions **Efficiency**: Built-in 3% line reactor and EMI RFI filter H standard **Rugged and reliable**: High overload (CT) and low overload (VT) rated, robust time-proven design, durable metal power section, brake chopper circuit	UL c UL CE IEC	• EtherNet/IP • Modbus RTU/TCP • PROFIBUS DP • DeviceNet • CANopen • LonWorks	• ABB (ACS310, ACS550) • GE (AF-650) • Rockwell/Allen-Bradley (PowerFlex 70, 753) • Schneider/Square D (Altivar 61, 71) • Siemens (Micromaster 430, Sinamics G120) • Vacon (NXL) • Yaskawa (P1000, A1000)	• Open IP21, IP54 • Open NEMA 1, 12 • Enclosed NEMA 1, 12, 3R • AGSVX (agriculture config) • Pump panel (pump config) • Consult Eaton for NEMA 4X
SPX 	• High-performance drive	In applications where reliability and quality are essential for high performance, the SPX VFD is the ideal choice. They are equipped with high processing power, capable of closed loop feedback, safe torque off, permanent magnet motor operation, and very precise motor control.	—	**Three-phase to three-phase** 230V to 100 hp 480V to 2200 hp 575V to 2300 hp	**Ease of use**: Startup Wizard, seven built-in applications, customizable software, advanced capabilities and inputs, local/remote button, modular design, text display **Space-saving design**: Compact design, open NEMA 12 option, onboard I/O expansion provisions **Efficiency**: Built-in 3% line reactor and EMI RFI filter H standard, increased microprocessing power **Rugged and reliable**: High overload (CT) and low overload (VT) rated, robust time-proven design, durable metal power section, brake chopper circuit	UL c UL CE IEC	• EtherNet/IP • Modbus RTU/TCP • PROFIBUS DP • DeviceNet • CANopen • LonWorks	• ABB (ACS800) • Rockwell/Allen-Bradley (PowerFlex 700, 755) • Schneider/Square D (Altivar 71) • Siemens (Micromaster 440, Sinamics G130, G180, S120) • Vacon (NXS) • Yaskawa (A1000)	• Open IP20, IP21, IP54 • Open NEMA 1, 12 • Enclosed NEMA 1, 12, 3R • Consult Eaton for NEMA 4X
LCX 	• Liquid cooled drive	The LCX VFD is well suited for locations when air-cooling would be difficult or expensive or when space is at a premium. These extremely compact drives are suitable for ships, mines and heavy industry.	—	**Three-phase to three-phase** 480V to 3200 hp 575V to 2800 hp	**Ease of use**: Startup Wizard, customizable software, advanced capabilities and inputs, local/remote button, modular design, text display **Space-saving design**: Compact space-saving design especially beneficial for NEMA 4X applications **Efficiency**: Advanced low heat transfer cooling system, increased microprocessing power **Rugged and reliable**: Same reliable control module and operating system as SPX	UL c UL CE IEC	• EtherNet/IP • Modbus RTU/TCP • PROFIBUS DP • DeviceNet • CANopen • LonWorks	• ABB (ACS8000-07LC) • Rockwell/Allen-Bradley (PowerFlex 700L) • Schneider/Square D (Altivar 61Q) • Siemens (Sinamics G150) • Vacon (NXP)	• Open IP00
SPI/SPA 	• Common DC bus drive • Active front end drive • Regenerative drive	Eaton offers a comprehensive range of common DC bus VFD products. This includes a number of front-end units and inverter units in the entire power range. Common DC bus drives are used in a multitude of applications and combinations. Drives that are braking can transfer the energy directly to the drives in a motoring mode.	—	**Three-phase to three-phase** 480V to 2400 hp 575V to 2200 hp	**Ease of use**: Startup Wizard, customizable software, advanced capabilities and inputs, local/remote button, modular design, text display **Space-saving design**: Compact modular expandable design **Efficiency**: Bidirectional/regenerative energy savings capabilities **Rugged and reliable**: Same reliable control module and operating system as SPX, shared components for inverter and active front end for reduced spare	UL c UL CE IEC	• EtherNet/IP • Modbus RTU/TCP • PROFIBUS DP • DeviceNet • CANopen • LonWorks	• ABB (ACS8000-U11) • Emerson (Unidrive SP) • Rockwell/Allen-Bradley (PowerFlex 20, 700AFE) • Schneider/Square D (Altivar ATV32, LXM32) • Siemens (Sinamics S120) • Vacon (NXP) • Yaskawa (F7)	• Open IP00, IP21 • Open NEMA 1
CPX 	• 18-pulse drive	The CPX VFD uses advanced 18-pulse clean power technology that significantly reduces line harmonics at the drive input terminals and is designed to exceed IEEE 519-1992 requirements. Delivering true power factor and reducing harmonic distortion prevents upstream transformer overheating and overloading of breakers and feeders, enabling the application of variable frequency drives on generators and other high-impedance power systems.	—	**Three-phase to three-phase** 230V to 200 hp 480V to 800 hp 575V to 800 hp (Consult Eaton for larger hp)	**Ease of use**: Uses the core SVX/SPX drive platform; therefore, sharing many of the drive-related characteristics of the component drive including Startup Wizard and built-in applications **Space-saving design**: Designed and engineered to optimize space, including flange mounting the drive with the heat sink external to the enclosure. Smallest footprint in the industry **Efficiency**: Designed and tested to provide maximum efficiency through best-in-class components **Rugged and reliable**: Proven design built on 10+ years of experience in 18-pulse engineering	UL	• EtherNet/IP • Modbus RTU/TCP • PROFIBUS DP • DeviceNet • CANopen • LonWorks	• ABB • Rockwell/Allen-Bradley • Schneider/Square D • Yaskawa	• Enclosed NEMA 1, 12 and 3R • Consult Eaton for NEMA 4X
CFX 	• Filtered drive	The CFX VFD uses a tuned passive filter to significantly reduce the line harmonics generated by a standard 6-pulse drive. Designed for small to mid-sized drive applications, the CFX, in conjunction with the CPX, offers the user a tiered approach to harmonic mitigation.	—	**Three-phase to three-phase** 230V to 100 hp 480V to 400 hp 575V to 400 hp	**Ease of use**: Uses the core SVX/SPX drive platform, Startup Wizard, built-in applications **Space-saving design**: Designed and engineered to optimize space including flange mounting the drive with the heat sink external to the enclosure. Smallest footprint in the industry **Efficiency**: Designed and tested to provide maximum efficiency through best-in-class components **Rugged and reliable**: Tested and proven solution built to meeting commercial and industrial applications. Engineered solutions to further protect filter and drive available	UL	• EtherNet/IP • Modbus RTU/TCP • PROFIBUS DP • DeviceNet • CANopen • LonWorks	• ABB • Rockwell/Allen-Bradley • Schneider/Square D • Yaskawa	• Enclosed NEMA 1, 12 and 3R • Consult Eaton for NEMA 4X
SC 9000 	• Medium voltage drive	The Ampgard® SC 9000™ medium voltage VFD combines innovative technology with the reliable design and construction of Eaton Ampgard products. Designed for use with induction or synchronous motors, the Ampgard SC 9000 delivers maximum benefits while being the smallest medium voltage drive in the industry.	—	**Three-phase to three-phase** 2400 to 4160V Up to 6000 hp	**Ease of use**: Drive can be integrated into Ampgard motor control products lineup connected by common bus, common control board and keypad with low voltage product offering **Space-saving design**: Smallest footprint in the industry, common bus connection to other motor control products for ease of installation **Efficiency**: Integrated 24-pulse converter, three-level inverter topology **Rugged and reliable**: Full load burn-in testing completed on every drive, time-proven Ampgard motor control assembly design, encapsulated drawout inverted to reduce risk of environmental contamination	UL	• EtherNet/IP • Modbus RTU/TCP • PROFIBUS DP • DeviceNet • CANopen • LonWorks	• Siemens (ROBICON Perfect Harmony™) • Rockwell/Allen-Bradley (PowerFlex 7000) • Toshiba (T300MVi) • ABB (ACS 1000)	• Enclosed NEMA 1

Selection considerations

- *What is your system application?*
- *Is your load constant torque or variable torque?*
- *What are your voltage and hp requirements?*
- *What is the motor Full Load Amps (FLA)?*
- *Do you need an open or enclosed product?*
- *What NEMA enclosure rating do you need?*
- *Do you need a main breaker or a bypass?*
- *Do you need any accessories or communication cards?*

Warranty process

Required information: product serial number, original general order number, customer site location, contact information and detailed description of the issue.

1. Call Post-Sale Support for troubleshooting assistance at (877) 386-2273 x2 x6 x3.
2. Contact EatonCare or CORE for warranty parts and service processing at (877) 386-2273 x4 x2.
3. Return replaced components per the instructions provided on the return paperwork.

PC software

Software
9000XDrive and 9000XLoad—Used with SVX, SPX, LCX, SPI, SPA and all enclosed drives using these units
MaxConnect and MaxLoader—Used with M-Max and H-Max
DrivesConnect—Used with DA1 and DC1

Calculators

Harmonics Estimator—Estimate Total Harmonic Distortion (THD) of System
By having the transformer information and the one-line diagrams, a harmonics analysis can be quickly put together to ensure the system will meet requirements set by IEEE 519. Drive configurations can quickly be changed, allowing engineers to provide the most cost-effective solution (www.eaton.com/drives → Software Downloads → Register for Harmonics Calculator)

Energy Savings Estimator—Estimate ROI for System
The program creates an Energy Savings Estimation Report that details yearly energy savings, reduction in CO_2 emissions and estimated payback time by analyzing system configuration, total installation costs and duty cycle (www.eaton.com/drives → Software Downloads → Register for Energy Savings Estimator)

BT300 HVAC Drives

Figure 1. BT300 HVAC Drive without and with Integral Disconnect.

Description

Siemens Industry's BT300 is designed specifically for the demands of today's HVAC systems. Increased focus on energy efficiency of variable flow systems has increased the need for easy-to-use and highly reliable variable frequency drives that reduce the cost of installation and maintenance while maximizing energy savings.

The BT300 comes standard with unique and industry-leading features:

- Motor Switch Ride Through – during maintenance the motor maintenance switch can be opened and closed without stopping or tripping the drive
- Thin Film Capacitors – eliminate the need to condition or reform the capacitors before applying power
- View/Monitor nine parameters at one time – user selectable, users determine the parameters for their applications
- Smallest Type 12 footprint on the market – lower shipping cost and easy installation

Designed for HVAC

HVAC demands are unique to other drive applications. The BT300 is singularly focused on the needs of HVAC variable flow systems:

- Built-in wizards for start-up and easy setup of advanced functions
  - PID Start-up Wizard
  - Multi-pump Wizard
  - Fire Mode Wizard
- Integrated harmonic filters reducing noise and interference eliminating the need for additional filters and reactors.
- Internal reactors equivalent to 5% input impedance.
- BT300 Thin Film Capacitors do not require conditioning. Immediate drive replacement is possible.
- Standard Integration Protocols (APOGEE® P1, BACnet, Modbus, LON (optional), Metasys N2)
- Two built-in PID controllers for fast and accurate process control
- Built-in fire mode controller
- Energy Savings with > 97.5% efficiency
- Optimized cooling fans
- UL Type 1 and Type 12 – Same Size
- 208V to 240V 1 HP to 125 HP
- 380V to 480V 1.5 HP to 250 HP
- Optional integrated drive disconnect
- Advanced I/O expansion capability built into the drive
- One common interface throughout all power ranges
- Intuitive graphical keypad with multilingual display.

Ease of Use

The BT300 drives are easy to use, easy to understand and easy to program. This means installed cost and maintenance savings. Information you want for your specific operation:

- Built-in Help Menu – explains each parameter
- Built-in Maintenance Manual - shows possible causes and suggested remedies
- Nine user-selected values can be defined and monitored at one time – providing you with all the information you need at a glance
- Embedded Ethernet and RS-485 - No additional hardware or cost for Ethernet. Standard HVAC protocols out-of-the-box.
  - APOGEE P1
  - BACnet IP
  - BACnet MS/TP
  - Modbus RTU
  - Modbus TCP
  - Metasys N2

World-class Standard of Quality

Siemens Industry's VFDs are designed to operate in all types of power situations or demanding environments. The BT300's reliability is a result of extensive testing from design to deployment. This testing includes highly accelerated stress testing in extreme temperatures, vibration, and humidity as well as current and voltage variations. Not only will the BT300 withstand most power situations and demanding environmental conditions, it will provide confidence and peace of mind knowing that it will not fail, ensuring a long, trouble-free installation.

Investment Protection

The BT300 supports Siemens Industry's long-standing, industry-leading backward compatibility tradition. The BT300 HVAC Drive is backward compatible to SED2 installations. A migration kit to mount a BT300 Drive in place of an SED2 to support the existing conventional or electronic bypass fail is an ideal solution to moving your technology forward at the lowest possible cost. The SED2 to BT300 Migration Kits provide you with all the components necessary to mount your BT300 quickly and easily in various locations within your facility.

Environmentally Responsible

The BT300 saves energy, is environmentally safe and RoHS Compliant. All BT300s are constructed with lead-free circuit boards and produce no hazardous waste. They use the latest technologies for insulated-gate bipolar transistors (IGBT) and power capacitors. The thin-film power capacitors do not contain toxic electrolytes; therefore, the BT300 capacitors will not dry out. There is no need to “wake up” or condition the capacitors before installing. Your BT300 is safe to connect even after years of storage.

The BT300 IGBT design results in lower heat losses and lower operating temperatures. It weighs 40% less than competitors' models decreasing the cost of shipping and allowing for easier installation. An average BT300 generates 68% to 125% fewer CO2 emissions than heavier competitors' drives during shipping.

480V	Frame Size		4				5			6			7				8			9	

Specifications

Table 1. Drive Specifications.

Drive Specifications	Description
Input voltage and power ranges (3-phase)	208V to 240V -10% to +10% 1 HP to 125 HP (0.75 kW to 90 kW) 380V to 480V -10% to +10% 1.5 HP to 250 HP (1.1 kW to 160 kW)
Input frequency	45 Hz to 66 Hz
Output frequency	0 Hz to 320 Hz
Frequency resolution	0.01 Hz
Efficiency	>97.5%
Overload Capacity	1.1 × Nominal rated output current 110% for 1 minute/10 minutes
Switching Frequency	1.5K to 10K Hz; Automatic switching frequency de-rating in case of overheating
Short Circuit Withstand Rating	100,000 AIC
Frequency reference Analog Input	Resolution 0.01 Hz Resolution 0.1% (10-bit)
Field weakening point	8 to 320 Hz
Acceleration time	0.1 to 3000 seconds
Deceleration time	0.1 to 3000 seconds
Ambient Operating Temperature	-14° F (-10°C) no frost to 104°F (40°C) without de-rating and 131°F (55°C) with de-rating
Storage Temperature	-40°F (-40°C) to 158°F (70°C)
Relative Humidity	0 to 95% RH, non-condensing, non-corrosive
Air Quality Chemical Vapors Mechanical Particles	IEC 60068-2-60 IEC 60721-3-3, unit in operation, class 3C3 IEC 60721-3-3, unit in operation, class 3S2
Altitude	100% load capacity (no de-rating) up to 3,280 ft (1,000 m) 1% de-rating for each 328 ft (100 m) above 3,28 ft (1,000 m) Maximum altitude 14,763 ft (4,500 m)
Vibration	IEC 61800-5-1 and IEC 60068-2-6
Shock	IEC 61800-5-1 and IEC 60068-2-27
Enclosures	UL Type 1, UL Type 12
EMC Immunity	Fulfills IEC 61800-3, first and second environment
EMC Emissions	EN61800-3C2
Average Noise level (cooling fan) sound level in dB(A)	FS4: 65; FS5: 70; FS6 and FS7: 77 FR8: 86; FR9: 87
Agency Approvals	UL 508C; UL, cUL
Conformity	CE, RoHS compliant
Analog Inputs	2: voltage or current (0 to 10 Vdc, 0/4 to 20 mA)
Analog Output	1: selectable voltage or current
Digital Inputs	6: programmable and isolated
Relay Outputs	2: Form C 1: Normally Open
Auxiliary input voltage	24 Vdc +/- 10% 250 mA maximum
Auxiliary output voltage	24 Vdc +/- 10% 250 mA maximum, total of both outputs
Control method	Linear, parabolic and programmable V/f; and flux current control low-power mode
PWM frequency	2K Hz to 16K Hz (adjustable in 2k Hz increments)
Fixed frequencies	15 programmable
Skip frequency bands	3 programmable
Serial Interface Embedded Resident Protocols	RS485 and Ethernet APOGEE P1, BACnet IP; BACnet MS/TP, Modbus RTU, Modbus TCP, Metasys N2
Protection features	Under-voltage trip limit, Over-voltage trip limit, Ground fault protection, Mains supervision; Motor phase supervision; Over-current protection; Unit over-temperature protection; Motor overload protection; Motor stall protection; Motor underload protection; Short-circuit protection of +24V and +10V reference voltages.

Specifications, Continued

ESM 13:
Transformer Replacement

ESM Overview

Ameresco proposes to replace a number of existing step-down transformers with new energy-efficient transformers at the Central High School, Eastern High School, City Hall, Police Court, Main Library, City Yard and Water Pollution Control Park. All of the transformers are dry-type indoor transformers that step-down 480 volt power to 208Y/120 volt power. Ameresco proposes to replace these transformers with new premium efficiency units that will reduce the electric losses and lower the cooling load of some of the equipment rooms.

Figure 13.1: Existing Transformer found at the City Hall.

ESM Detail

Existing System

Most transformers in use at for the City of Bristol are estimated to be loaded at about 10% - 15% of their total capacity which is typical of school and office buildings. They are designed to be able to transform the electricity from 460 volts to 120/208 volts at power level ratings up to the design ratings and are most efficient at or around the design rating. Operating at low levels for normal transformers is inefficient. The standard low voltage step-down transformers often have high temperatures resulting in more energy consumption and warmer electric rooms. The transformers identified during the audit for replacement are listed in the following table.

Building	Location	Existing Size (KVA)	Proposed Size (KVA)

Proposed System

Ameresco proposes to replace low voltage transformers at the sites listed above with new units that meet the federal Energy Star program requirements for energy efficiency under non-linear load conditions. Specifically, the new transformers will be selected to meet NEMA TP-1 efficiencies under a K-7 load profile. The K-factor is an overall measurement of the level of harmonics in a system. Typical K-factors range from 4 to 9 in

a mixed (linear and non-linear) load environment, such as a commercial office space. Higher harmonic levels are mostly associated with applications having a high density of computer and other non-linear loads.

A total of 63 transformers were identified that qualify for replacement. The transformers are dry-type indoor transformer that step-down 480-volt power to 208/120-volt power. Tie-ins to the existing primary and secondary power feeds will be required. Ameresco recommends installing Powersmiths' E-SAVER Model C3L transformers under this ESM.

Installation of the measure will require isolation of each of the affected transformers and the associated distribution panels that are fed by the transformer while the transformer is removed and the new transformer installed.

Specific Information about the Existing System

The new transformers will be manufactured by PowerSmiths, based on model C3L. Some of the transformers rated for 45 kW and higher that had a low measured load during the audit will be downsized one size.

Typical installation sequence of the transformers would be as follows:

- Lockout/tagout panel feeding step-down transformer
- Disconnect primary and secondary feeds into transformer
- Remove and dispose of existing transformer, recycling where possible
- Install new transformer on same pad or floor footprint
- Reconnect primary and secondary feeds into transformer

Implementation of this measure will also provide the City with a valuable capital upgrade that will improve the reliability of the electrical distribution system and reduce the likelihood of failure that can occur with overheated transformers. The proposed measure will significantly reduce electric energy costs.

The measure assumes the following:

- The new transformers will be installed in the same location as existing.
- The existing feeders are assumed to be reused
- Removal or remediation of any hazardous materials is not included.
- Ameresco is not responsible for reprogramming of the fire alarm, security alarms, computer servers or computer systems that may be required for the shutdown of the electric circuits affected by the measure.
- Repair or upgrade of any feeders, breakers or disconnects are not included.
- Correction of any existing code violation is not included.
- The typical shut down for a conversion is 1 to 2 hours per transformer.

"Page content is subject to Confidentiality Restrictions"

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

The new transformers will reduce the temperature in the electric closets. As most of the transformers are over 15 years old, the new equipment will extend the useful life of the electric system.

E-Saver™ Transformer

APPLICATIONS

The E-Saver transformer is available with multiple efficiency ratings to deliver the lowest lifecycle cost to a wide variety of applications. E-Saver's reduce transformer losses by as much as 74%, providing consistent predictable electricity savings for decades in commercial and institutional environments.

DESCRIPTION

Since its introduction in 2002, the E-Saver transformer has set the benchmark for environmental protection, energy efficiency and reliability. Unlike standard and K-rated off-the-shelf transformers, E-Savers provide very high efficiency over broad load profiles including electronic loads. To ensure longer life and reduced environmental impact, E-Saver incorporates a Class 220 Nomex based insulation system with an organic epoxy impregnant.

QUIET OPERATION

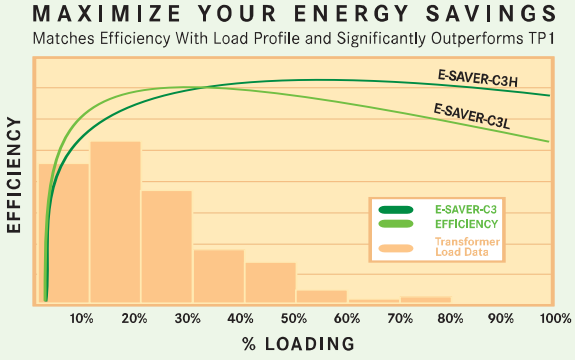
Workplace productivity can be compromised when noisy transformers are located close to people. To meet this challenge, E-Saver has embedded structural and acoustic treatments that combine to ensure quiet-operation; noise tests are part of our ISO9001 procedures for every transformer. Extra low-noise models are also available for sensitive environments.

INTEGRATED METERING OPTIONS

E-Saver transformers can be ordered with integrated SMART™ meters to acquire energy, power and efficiency measurements. Integrating meters helps lower the cost of commissioning and performance validation, by eliminating the need to open transformer enclosures to acquire measurements. A variety of meters are available including web-accessible meters that can be connected to Powersmiths WOW sustainability management system or third party building management systems to support ongoing accountability of energy use over time.

ROTATABLE INFRARED VIEWING PORT OPTION

Powersmiths Rotatable IR (Infrared) Viewing Port enables safe, non-invasive thermographic imaging of live equipment, without exposing personnel to electrical hazards like Arc-Flash. It is available as a factory installed option on all Powersmiths transformers.



ENVIRONMENT & QUALITY

A continuous improvement "lean green" strategy guides Powersmiths' product design and manufacturing. Initiatives such as increasing transformer efficiency, the Easy Skid, use of biodegradable product packaging and the reduction of harmful volatile organic compounds in production processes, are just a few examples of the extent to which Powersmiths takes its values seriously. Through these efforts Powersmiths has earned both ISO 14001 certification for its environmental management system and ISO 9001 for its quality management system.

TESTING AND WARRANTY

The E-Saver is subjected to extensive performance validation including efficiency under real world operating conditions. E-Saver's long life and dependable performance is backed up by Powersmiths' industry leading 25 year pro-rated warranty.

KEY FEATURES

- **Provides best available efficiency on the market**
- **K-rated for real world electronic loads**
- **Minimizes electricity waste**
- **Optimized for cool and quiet operation**
- **Significantly exceeds NEMA TP-1 (C-802) efficiency**
- **Provides the lowest life cycle cost for your energy rate**

STANDARD CONFIGURATION

The Powersmiths E-Saver is a high efficiency k-rated 60Hz dry-type distribution transformer available in 3-phase and single phase models with either aluminum or copper windings.

The E-Saver-C3L is optimized for light loading with copper (k7) or aluminum (k4).
The E-Saver-C3H is optimized for heavy loading with copper (k13).

Standard temperature rise for the C3L model is 130C, for the C3H, C4, C5 it is 115C or lower. Under the static NEMA TP2 test, the C3L and C3H have up to 35% less losses than a TP1* (C802), but deliver over 50% less losses in real world conditions, as validated by extensive field testing.

The C4 and C5 models deliver additional incremental savings – up to 45% and 55% respectively compared to TP1 (C802), to satisfy the need for higher efficiencies and improved ROI (*) where higher energy rates prevail, including solar applications.

CERTIFICATIONS

The E-Saver is certified to UL1561 and CSA-C22.2-47-M90 for distribution class transformers and meets applicable ANSI and IEEE standards; primary and secondary terminals and voltage taps are readily accessible by removing the front cover plate; 10kV BIL, 220C class insulation.

ESM 14:
Steam Trap Replacement

ESM Overview

Ameresco proposes to replace steam traps at the Central High School and Eastern High School. The proposed replacement and/or repair of steam traps will improve the overall steam use and heating system efficiencies. Steam distribution is accomplished at low pressure with thermal energy wasted due to failing traps. Properly functioning steam traps pass air and drain condensate formed in the steam distribution system and prevent live steam from exiting. This measure will address approximately 588 existing steam traps, and the improvement will result in energy and maintenance cost savings for the City.

Figure 14.1: Existing trap located at the Central High School.

ESM Detail

Existing System

The Central High School and Eastern High School utilize steam boilers to heat the buildings. The steam boilers at Central High currently fire on oil while the Eastern High boilers fire on natural gas and are both coupled with a steam and condensate distribution system to heat sections of the buildings. Failed open steam traps permit steam to enter the condensate plumbing. This wasted steam is then vented through the condensate receivers. Steam traps that fail in the closed position restrict the flow of condensate to the return piping.

At the Central and Eastern High Schools, the majority of traps observed are currently SteamLoc orifice type traps, where a plate keeps live steam from flowing, and the hole or orifice allows either condensate or a small amount of live steam to escape. Properly sized orifice plate steam traps can function properly, but they are not suitable for all applications. Steam will escape when no condensate is present, and condensate backups can occur at start up and during periods of high demand. Orifice plate steam traps are best suited for situations where the pressure difference across the plate and the condensate load remain constant. Based on conversations with personnel for the schools it was reported the orifice traps are not functioning properly in some areas, and have been causing clogs in the system and rotting out pipes.

Leaking steam traps typically go unnoticed because they have little effect on the terminal heating units. A typical problem report is for a failed closed, or cold, steam trap. This results in a high failure rate for the steam traps in the open position, resulting in substantial steam losses.

"Page content is subject to Confidentiality Restrictions"

Properly functioning steam traps pass air and drain condensate formed in the steam distribution systems and prevent live steam from exiting. The condensate is trapped and removed via various types of steam traps, each with a specific function and range of applications. Steam traps of differing design perform the task of removing condensate from various components such as drip legs, heating coils and converters. These traps require periodic maintenance to assure proper operation.

Please refer to the following table for a list of steam traps to be replaced. The inventory is based on a steam trap survey performed during the IGEA by Ameresco.

NOTE: The trap survey of the two High Schools was conducted after the steam boilers had been turned off, so physical testing of each trap was not conducted at this time. Also note, not all areas were accessed therefore additional traps may be present which were not included below. The tunnels were not entered, so steam trap estimates were made for these confined spaces.

FT=Float & Thermostatic; TT=Thermostatic; FO=Fixed Orifice/Venturi Traps

Proposed System

Ameresco proposes to replace or repair (in certain cases) the steam traps at the Central and Eastern High School to improve the overall steam use and heating system efficiencies. The scope of work will consist of replacing all of the existing traps with new or retrofit traps. With this method, all failed traps are assured to be replaced. The malfunctioning F&T traps will be repaired where possible or replaced with properly sized equivalents, while the malfunctioning thermostatic traps will be fitted with new components. Steam trap housings will be reused wherever possible with only the critical parts being retrofitted with new elements. All existing in-line orifice style traps will be replaced with in-line float & thermostatic steam traps. Thermostatic traps will be replaced with new drop-in elements. If repairs to the existing thermostatic traps are not feasible, at Ameresco's discretion, the trap will be replaced with a new trap.

"Page content is subject to Confidentiality Restrictions"

Ameresco did not observe any major issues that would merit a significant allowance for piping repair. A small budget was included to make repairs to pipe and/or valves within twelve (12) inches of the steam traps. Major repairs to the existing steam and condensate piping are excluded from the scope.

Excluded from the scope of work is any asbestos abatement and repair of existing steam/condensate piping. Based on visual inspections, asbestos surrounding the steam traps was not present.

During construction a complete steam trap survey will be conducted including testing of each trap at Eastern High School to be eligible for the 50% incentive offered by Eversource. Central High School is heated by oil so there would not be an incentive from Eversource.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

The new steam traps will improve the existing steam system's efficiency. The new steam traps will reduce maintenance cost and energy savings will result due to fewer failures.

Established 1958

Thermostatic Radiator Steam Traps

Series TA

Operation

Tunstall Associates, Inc. produces a complete line of thermostatic radiator steam traps with ratings up to 125 psi. Each unit is tested and inspected before leaving the factory guaranteeing years of trouble free service. All units are "normally open" to expel air and water and will "close" at saturated steam temperature thereby preventing steam from entering into condensate return lines. Each Tunstall Steam Trap features the Tunstall Capsule® which has become the best steam trap replacement bellows available today.

Tunstall Capsule®

Features

- Chrome-plated heavy duty forged brass
- TIG welded stainless steel Tunstall Capsule® with balanced pressure stainless steel bellows
- Calibrated, inspected and tested
- Ratings from 25" Hg vacuum to 125 psi
- Available in 1/2" & 3/4" straight or angle, 1/2" x 3/4" angle, 1/2" vertical and 1" angle patterns

Benefits

- Simple installation
- Corrosion resistant stainless steel internals
- Extended life on low pressure applications

Applications

- Cast Iron Radiators
- Finned Tube Radiation
- Convectors
- Air Coils
- Sterilizers
- Drips

Typical Specification

Furnish and install Tunstall Thermostatic Steam Traps as shown or as specified on plans and in accordance with manufacturer's instructions, sizes 1/2", 3/4" or 1". The trap body and cover shall be forged brass and provided with an entirely stainless steel Tunstall Capsule®. Rating shall be _____ lbs/hr at _____ PSIG pressure differential. Each unit shall be guaranteed for 2 years from date of installation.

The Tunstall Capsule® professionally upgrades all thermostatic steam traps. Refer to catalog #795 or www.tunstall-inc.com for more detailed information.

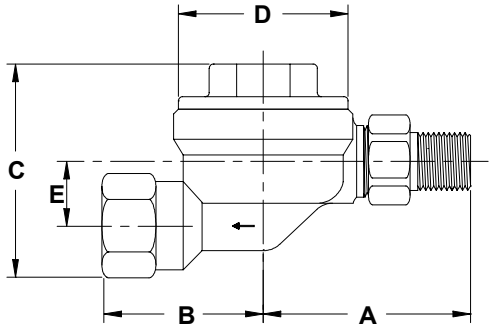
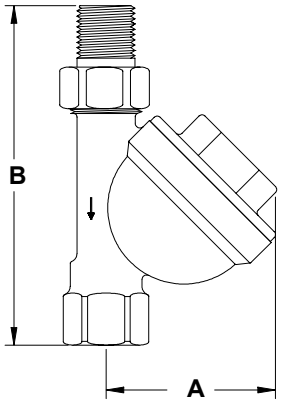
*Ratings are in accordance with standards established by The Steam Heating Equipment Manufacturers Association (SHEMA). No safety factor required.

**To convert Square Feet EDR to pounds of condensate per hour: Divide the square foot ratings by 4.



One Square Foot EDR is equivalent to net emission of 240 BTU per hour with 215°F steam in the radiator surrounded by 70°F air temperature.

***Basic ratings for trap pressures greater than 25psi are given in lbs of condensate per hour.



One pound of condensate is equivalent to approximately 1000 BTU; 1000 BTU is equivalent to approximately 4 square feet EDR.

Tunstall®

Established 1958

Thermal-Disc™ Steam Traps

Series TA-TD

Operation

Tunstall Associates, Inc. produces a full line of Thermal-Disc™ Steam Traps. Available in 3/8", 1/2", 3/4" and 1" NPT connections, all the internal parts are stainless steel for long service life.

The Tunstall Thermal-Disc™ operates using Bernoulli's Theorem; as condensate enters the Thermal-Disc™ Trap, it lifts the thermal disc and discharges through outlet ports. Multiple outlet ports assure that the lift of the disc is parallel to the seat for efficient operation. Once the condensate reaches its flash point, the pressure on the top of the disc increases, due to higher velocity steam, causing the disc to snap closed. As the steam above the disc condenses, pressure above the disc will lower, and allow the disc to lift again and repeat the process.

Features

- In-Line Connection
- Compact Size
- High Strength Stainless Steel Construction
- Low Maintenance (Only one moving part)
- Can be installed Vertically for "Freeze Proof" installation

Applications

- Steam Main Drainage
- High Pressure Drips
- Tracer Lines
- Process Equipment
- Laundry Equipment
- Kitchen Equipment
- Superheated Steam applications
- Outdoor installations subject to freezing

Materials of Construction	
Body	Stainless Steel AISI 420F

500	1120	1880	2780	4350
550	1185	1960	2985	4560
600	1290	2060	3140	4840

Note: Max. back pressure should not exceed 80% of the inlet pressure under any conditions of operation, otherwise the trap may not shut.

Installation

Valve installation is typically in the horizontal position as close to the equipment being drained as possible. A 20 mesh strainer is recommended upstream of the trap as is an isolation valve. Piping to and from the trap should be equal to the trap connection (one size larger is acceptable). Body material is not suitable for welding.

Freeze proof installation is achieved by installing the trap vertically, discharging downward. All drains must be pitched towards the trap. Discharge piping must be self-draining.

Tunstall®

Established 1958

Float & Thermostatic Steam Traps

Series TA-FT

Operation

Tunstall Associates, Inc. produces a full line of Float & Thermostatic Steam Traps containing a float valve mechanism which modulates to discharge condensate continuously, while non-condensable gases are released by a separate internal balanced pressure thermostatic air vent (The Tunstall Capsule®).

The "H" pattern body on all ¾", 1" (15, 30, 75 & 125 psig) and 1-1/4" (15 & 30 psig) has been designed to offer maximum installation flexibility.

For larger sizes 1-1/2", 2" (15, 30, 75 & 125 psig) and 1-1/4" (75 & 125 psig), the inlet and outlet taps are located in the cover. This design allows for higher capacities and direct retrofits for older piping systems. All Tunstall float and thermostatic traps can be serviced without disturbing system piping.

Features

- Variety of piping connections.
- Stainless steel balanced pressure thermostatic air vent (Tunstall Capsule®).
- All stainless steel internal components
- Wide selection ¾"-2" @ 15, 30 , 75 & 125 psig differential pressures.
- Designed to withstand water hammer & high load demands.
- Designed for In-line repair.
- Made in the U.S.A.

Construction

Tunstall float and thermostatic traps feature all stainless steel interiors, heavy duty trap housings, easy access to internal parts and convenient piping connections.

Float & Thermostatic Steam Traps

Series TA-FTH (High Capacity)

Operation

Tunstall Associates, Inc. produces a full line of Float & Thermostatic Steam Traps containing a float valve mechanism which modulates to discharge condensate continuously, while non-condensable gases are released by a separate internal balanced pressure thermostatic air vent (The Tunstall Capsule®).

The "FTH" series traps are designed for use in systems that produce an exceptionally large amount of condensate (625 to 24,000 lbs. of condensate per hour). Two sizes (1-1/2" & 2") available for low, medium and high pressure applications with a "H" pattern piping connection for maximum installation flexibility.

All Tunstall float and thermostatic traps can be serviced without disturbing system piping.

Features

- Rapid condensate removal.
- Stainless steel balanced pressure thermostatic air vent (Tunstall Capsule®).
- All stainless steel internal components
- Variety of piping connections.
- Designed to withstand water hammer & high load demands.
- Designed for In-line repair.
- Made in the U.S.A.

Construction

Tunstall float and thermostatic traps feature all stainless steel interiors, heavy duty trap housings, easy access to internal parts and convenient piping connections.

Tunstall®

Established 1958

Inverted Bucket Steam Traps
Series TA-IB (Models 8080 & 8181)

Operation

Tunstall Associates, Inc. produces a full line of Inverted Bucket Steam Traps containing a stainless steel bucket and valve mechanism which are either in a full closed position, or a full open position to discharge condensate.

As the system starts, air and non-condensable gases vent through the orifice in the bucket; condensate also enters through the standpipe which forms a water seal in the bottom of the bucket. As steam enters the trap a simple lever mechanism attached to the inverted bucket snaps shut; then as the steam condenses the buoyancy of the bucket changes thus opening the lever mechanism, and allowing pressure to force the condensate out of the trap. This process repeats itself exactly and continuously to maximize the efficient use of energy. No cooling leg required. Refer to capacity charts when ordering.

Features

- In-Line Connection
- High Strength Cast Iron Body
- Hardened Stainless Steel Valve & Seat
- Stainless Steel Bucket
- Test Plug
- Low Maintenance

Applications

- Converters
- Dryers
- High-Pressure Drip
- Laundry Equipment
- Oil Preheaters
- Pressing Machinery
- Process Equipment
- Steam Cookers
- Steam Heated Vats
- Unit Heaters

ESM 15: Pipe & Jacket Insulation

ESM Overview

Ameresco proposes to insulate bare hot water, domestic hot water, steam and condensate piping in unconditioned mechanical spaces at Central High School, Eastern High School, and Chippens Middle School. Uninsulated piping results in high distribution energy losses and consequentially heats the unoccupied spaces. Installing insulation on the existing pipes sill improve the overall system efficiencies at these buildings.

Figure 15.1: the large bare steam valves at Eastern High School will be insulated under this ESM.

ESM Detail

Existing System

Central High School is provided with low pressure steam by three space heating boilers. The two primary boilers used are HB Smith Series 28A-18, rated at 4,629 MBH output each, with dual fuel burners currently only using Oil. One Cleaver Brooks CR655-200 steam boiler with 8,375 MBH input installed in 1966 is used as back-up. There are a number of large uninsulated steam valves located on the main supply header in the boiler room. Domestic Hot Water is provided by two (2) Duramax gas-fired atmospheric boilers each with 840 MBH input, serving a 350 gallon A.O. Smith indirect storage tank. The domestic hot water distribution system is almost completely bare in the boiler room.

Eastern High School is provided with low pressure steam by two space heating boilers. The two primary boilers used are Smith Mills 400A cast iron sectional, rated at 5,093 MBH output each, with dual fuel burners currently using gas. There are a number of large uninsulated steam valves identified in the boiler room and the basement pipe corridor. Domestic hot water is produced by an indirect system consisting of the space heating boilers and an A.O. Smith custom model HWG350 indirect storage tank. The domestic hot water system in the boiler room is almost completely bare as well. Ten (10) AHU's serve areas such as the Small gym, locker rooms, and offices. Heating and ventilation units (HVs) serve various areas such as the old gym, locker rooms, wrestling room, music room, cafeteria, band room, halls, and rifle range (HV-1 thru HV-9). Much of the steam distribution systems in the HV and AHU mechanical rooms are lacking insulation on both pipes and valves.

At Chippens Middle School heating hot water is generated by two H.B. Smith Series 28A-16 dual-fuel boilers, each with an input capacity of 5,189 MBH. Two 20 HP pumps distribute heating hot water throughout the building to the radiation loop and terminal units. The two 4" triple duty valves on the discharge lines of each hot water pump are not insulated. Domestic hot water is generated by a PVI water heater with a 400 gallon

"Page content is subject to Confidentiality Restrictions"

tank capacity. The copper piping that distributes the domestic hot water is completely bare throughout the boiler room.

The following tables indicate the approximate lengths of piping and quantity of valves affected by this ESM.

Proposed System

Ameresco proposes to install a combined total of approximately 1,204 linear feet of insulation as detailed in the tables above. The proposed insulation will be a fibrous glass type with a factory applied fire retardant vapor barrier jacket. The insulation will have a K-factor of at least 0.27 at 75°F mean temperature. Typical manufacturers include Owens-Corning, Certain-Teed, Manville or Knauf. Heating system efficiency will improve as less heat is lost to the unoccupied and unconditioned mechanical spaces.

The scope of work includes the following;

- Remove any existing pipe insulation and dispose according to EPA requirements.
- Provide and install pipe insulation and removable/reusable valve jackets. Seal at locations where pipe penetrates walls.
- Pipe insulation thickness should meet the requirements in ASHRAE Standard 90.1 2010 table 6.8.3A.
- Use the pipe sizes and lengths provided in the following table for estimating.
- Provide and install any accessories (mounts, supports etc.) required during installation.
- Scope to include all fittings, elbows, etc.
- Label all new pipe insulation with appropriate distribution type and direction of flow.
- Clean up after installation.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

The newly installed insulation will reduce distribution heat loss, improving the overall heating systems efficiencies. Cost savings from the reduction of natural gas and oil usage will result from the implementation of this measure.

Submittal Sheet

Fiberglas® Pipe Insulation

☐ **SSL II® All-Service Jacket (ASJ), Self-Sealing Lap**
☐ **SSL® I ASJ**
☐ **No-Wrap**

Description

Owens Corning Fiberglas® pipe insulations are molded of heavy density resin bonded inorganic glass fibers. These one-piece, 36" (914mm) long, hinged sections are opened, placed over the pipe, closed and secured by means specific to the type as described below.

Fiberglas SSL II® Pipe Insulation is jacketed with a smooth, reinforced, wrinkle-resistant all-service (ASJ) vapor retarder jacket. Factory applied DOUBLESURE† double pressure sensitive adhesive closure provides positive mechanical and vapor sealing of the longitudinal jacket seam. Pressure sensitive butt strip seals complete the positive closure. Available in the most popular sizes.

In larger sizes *Fiberglas* Pipe Insulation is furnished with SSL® I, a single adhesive lap seal.

Fiberglas "No-Wrap" Pipe Insulation is also available without a jacket. It is intended for field installation of jacketing appropriate to the vapor control, damage or corrosion resistance requirements of the application.

Uses

Insulation of hot, cold, concealed and exposed piping operating at temperatures from 0°F (-18°C) to 850°F (454°C) in commercial buildings, industrial facilities and process or power plants.

†DOUBLESURE is a registered trademark of Morgan Adhesives Company.

Features/Benefits

SSL II Positive Closure System

Effective long-term vapor sealing of both longitudinal and butt joints. With double-adhesive lap seal, plus two-part butt strip seal, positive closure is fast, neat and foolproof. No need for staples and mastic, promoting unexcelled jobsite productivity.

Jacket and Lap Shipped Adhered

Short pieces of insulation can be cut without jacket loss; it won't come apart in handling. No "dog-ears" in or out of the carton. Dust and moisture can't reach the seal. Butt strips come in sealed bags inside the carton, staying clean until the moment of use.

Excellent Thermal Performance

Fiberglas Pipe Insulation's low thermal conductivity contributes to lower operating costs of heating and cooling equipment.

Meets Model Code Fire Ratings

Flame spread rating of 25 or less, and smoke developed rating of 50 or less, usually means that *Fiberglas* Pipe Insulation will be granted immediate building code approval.

Availability

Fiberglas Pipe Insulations are available in thicknesses and for pipe sizes as follows:

Insulation Thickness,		Nominal Pipe Sizes, NPS, in. (DN, mm)					
		SSL II		SSL I*		No-Wrap**	
in.	(mm)	Pipe Insulation		Pipe Insulation*		Pipe Insulation**	
½	(13)	½-6	(15-150)			½-6	(15-150)
1	(25)	½-15	(15-375)	16-33	(400-825)	½-33	(15-825)
1½	(38)	½-14	(15-350)	15-33	(375-825)	½-33	(15-825)

2½	(64)	2-11	(50-275)	12-26	(300-650)	½-32	(15-800)
3	(76)	3-10	(75-250)	11-26, 30	(275-650, 750)	½-31	(15-900)
3½	(89)	4½-9	(115-225)	10-18, 20-22, 24	(250-450, 500-550, 600)	½-30	(15-750)
4	(102)	4½-8	(115-200)	9-21, 24, 25	(225-525, 600, 625)	½-29	(15-725)
4½	(114)	6-7	(150-175)	8-10, 12, 14, 16, 18, 20, 24	(200-250, 300, 350, 400, 450, 500, 600)	½-28	(15-700)
5	(127)	6	(150)	7-14, 16-24	(175-350, 400-600)	½-27	(15-675)
5½	(140)					6-26	(150-650)
6	(152)					6-25	(150-625)

* SSL I all made-to-order except 14" x 2" (350mm x 51mm) and 16" x 1", 11/2" and 2" (400mm x 25mm, 38mm and 51mm).
** Consult Packaging Data Supplement (PP1.P5) available upon request for standard and made-to-order sizes.

Specification Compliance

- ASTM C 547, Mineral Fiber Pre-Formed Pipe Insulation, Type I to 850˚F (454˚C)
- ASTM C 1136, Flexible Low Permeance Vapor Retarders for Thermal Insulation: All Types
- ASTM C 795, Thermal Insulation for Use Over Austenitic Stainless Steel*
- Mil. Spec. MIL-I-22344D, Insulation, Pipe, Thermal, Fibrous Glass
- Nuclear Regulatory Commission Guide 1.36, Non-Metallic Thermal Insulation*
- U.S. Coast Guard Approval No. 164.009, Noncombustible Materials (no-wrap)
- New York City MEA No. 344-83
- CAN/CGSB-51.9 – Type 1, Class 2
- NFPA 90A

* Preproduction qualification testing complete and on file. Chemical analysis of each production lot required for total conformance.

Fiberglas® Pipe Insulation

Physical Property Data

Property	Test Method	Value	
Operating temperature range	ASTM C 411	0 to 850˚F* (-18˚C to 454˚C)*	
Jacket temperature limitation	ASTM C 1136	-20˚F to 150˚F (-29˚C to 66˚C)	
Jacket permeance	ASTM E 96, Proc.A	0.02 perm	
Puncture resistance	ASTM D 781	50 units	
Composite surface burning characteristics	UL 723,** ASTM E 84** or CAN/ULC-S102-M**	Flame spread Smoke developed	25** 50

*Limited to single layer applications above 650˚F (343˚C), but not greater than 6" (152mm) thickness.
** The surface burning characteristics of these products have been determined in accordance with UL 723, ASTM E 84 or CAN/ULC-S102-M. These standards should be used to measure and describe the properties of materials, products or assemblies in response to heat and flame under controlled laboratory conditions and should not be used to describe or appraise the fire hazard or fire risk of materials, products or assemblies under actual fire conditions. However, results of this test may be used as elements of a fire risk assessment which takes into account all of the factors which are pertinent to an assessment of the fire hazard of a particular end use. Values are reported to the nearest 5 rating.

Thermal Performance, ASTM C 680

		90%	3 (76)	2½ (64)	2 (51)
80	(27)	50%-80%	1 (25)	1 (25)	1 (25)
		90%	2½ (64)	2 (51)	1½ (38)
70	(21)	50%-80%	1 (25)	1 (25)	1 (25)
		90%	1½ (38)	1½ (38)	1 (25)

(1) For NPS (DN) greater than 16" (400mm), please contact your local Owens Corning Representative.
(2) If humidity exceeds 90%, some condensation is to be expected; therefore, a coating of a mastic or PVC jacket overwrap is recommended as repeated or continual wetting of the ASJ jacket will degrade its vapor retarder performance.

Thermal Conductivity

Apparent thermal conductivity curve determined in accordance with ASTM Practice C 1045 with data obtained by ASTM Test Method C 335. Values are nominal, subject to normal testing and manufacturing tolerances.

Mean Temp. ˚F	k Btu•in/hr•ft²•°F	Mean Temp. ˚C	λ W/m•˚C

Application Recommendations

The hinged sections of *Fiberglas* Pipe Insulation are opened, placed over the pipe, carefully aligned, and sealed or jacketed as required by the form of the insulation and the application.

Fiberglas SSL II Pipe Insulation is shipped with the jacket and longitudinal lap closed, the two adhesives separated by a release strip. The insulation is opened by pulling the release strip from between the two adhesive strips. The insulation is placed on the pipe, carefully aligned, and the two adhesives rubbed firmly together to close and seal. The two part butt strip seal completes the positive closure. Application may be at ambient temperatures from 25°F (-4°C) to 110°F (43°C).

Fiberglas "No-Wrap" Pipe Insulation is designed for field-jacketing with pipe covering secured by wires or bands, vapor sealed where required.

Outdoor applications must be protected from weather. If painting is required, use only water base latex paint.

Zeston® 2000 PVC

Insulated Fitting Covers and Jacketing

Description

Zeston 2000 fitting covers are designed to insulate and to provide a protective covering for pipe fittings. The fitting covers are supplied with Hi-Lo® Temp Formaldehyde-free™ fiber glass insulation inserts from the factory. Zeston PVC jacketing provides a protective covering for insulated or bare pipes. Zeston 2000 PVC fitting covers and jacketing are manufactured from high-impact, gloss white, UV-resistant, polyvinyl chloride which provides a simple, quickly installed system.

Available Shapes and Sizes

Fitting Covers. Zeston 2000 Series PVC fitting covers are available for the following: 45° and 90° (0.8 and 1.6 rad.) short and long radius elbows, tees and valves, flanges, reducers, end caps, soil pipe hubs, traps and mechanical groove-type fittings.

Jacketing. Zeston PVC jacketing is available in rolls in thicknesses of 10, 15, 20 and 30 mil (0.3, 0.4, 0.5 and 0.8 mm).

Cut & Curled™ Jacketing. Zeston PVC Cut & Curled jacketing is available in thicknesses of 20 or 30 mil (0.5 mm or 0.8 mm) (30 mil [0.8 mm] recommended for outdoor applications). It is available in factory-cut sizes to fit up to 30" (762 mm) O.D. All sections of Zeston PVC Cut & Curled jacketing are 48" (1219 mm) in length and are factory curled to fit snugly.

Uses

Zeston 2000 PVC fitting covers and jacketing are ideally suited for indoor or outdoor use on chilled water, hot water, steam and other piping systems in commercial, institutional, and industrial applications. The fitting covers, when combined with Zeston PVC jacketing and Perma-Weld® solvent welding adhesive, form a completely sealed system which meets the requirements of the USDA and FDA for applications in food, beverage, and pharmaceutical facilities.

Qualifications for Use

General

- Install the appropriate Hi-Lo Temp fiber glass insert by wrapping it completely around the pipe fitting without overly compressing it or leaving any voids. Ensure that the insulation insert covers all exposed surfaces. The Zeston PVC fitting cover should then be installed over the pipe fitting and fiber glass insert by securing the throat using either serrated tacks, Perma-Weld adhesive or Zeston Z-Tape.

Hot Systems

- PVC covers must be kept below 150°F (66°C) by use of proper insulation thickness.
- PVC covers should be kept away from contact with, or exposure to, sources of direct or radiated heat.
- For fittings where operating temperatures exceed 250°F (121°C), or where pipe insulation thickness is greater than 1½" (38 mm), two or more layers of Hi-Lo Temp insulation inserts are required beneath fitting cover.

Cold Systems

- An approved vapor retarder mastic compatible with PVC must be applied between pipe insulation and fitting cover, and on fitting cover throat overlap seam.

Operating Temperature Limits:
PVC: Up to 150°F (66°C)
Insert: 0°F to 450°F (-18°C to +232°C)
Flame Spread: 25 or less (up to 30 mil [0.8 mm])
Smoke Developed: 50 or less (up to 30 mil [0.8 mm])
Grade: Weatherable
Color: White
Finish: Gloss

- For fittings where operating temperature is below 45°F (7°C) or where the pipe insulation thickness is greater than 1½" (38 mm), two or more layers of Hi-Lo Temp insulation inserts are required beneath fitting cover.

Refrigerant Systems and Cold Systems in Severe Ambient Conditions

- Mitered pipe insulation segments. Fabricated or premolded insulation shapes may be used in lieu of Hi-Lo Temp insulation inserts.
- An intermediate vapor retarder compatible with PVC is required to completely seal the insulation prior to installing the Zeston 2000 PVC fitting cover. Care should be taken to ensure that the vapor barrier mastic is applied between the pipe insulation and the fitting cover, and on fitting cover throat overlap seam.

Totally Sealed Systems (USDA Approval)

- System requires that 20 or 30 mil (0.5 mm or 0.8 mm) Zeston PVC jacketing is applied to pipe insulation in conjunction with Zeston PVC fitting covers.
- All circumferential and longitudinal seams of jackets and fitting covers should be sealed with Zeston Perma-Weld solvent welding adhesive. Circumferential seams should be a minimum 1" (25 mm) overlap, and longitudinal seams should be 1½" to 2" (38 mm to 51 mm) overlap.
- Upon completion, all seams should visually be checked for seal and touched up, if necessary.
- Slip joints are required periodically between fixed supports and on continuous long runs of straight piping. Slip joints are achieved by increasing circumferential overlap to 8 to 10 inches (203 mm to 254 mm) and applying a flexible white caulking in the overlap area to maintain a sealed system.

Zeston® 2000 PVC

ESM 18: Window Replacements

ESM Overview

Ameresco proposes to replace the existing single-glazed windows at City Hall. The windows at City Hall have aluminum frames that are not thermally broken. The windows identified in this measure have poor insulating properties and add to occupant discomfort in addition to the building heating and cooling loads. Ameresco will replace these windows with new, double-glazed units having aluminum frames with thermal breaks, low-E coatings, and argon fill. The colors will match the existing design and will improve comfort as well as save heating and cooling energy.

Figure 18.1: The existing windows at City Hall will be replaced with a new high efficiency windows.

ESM Detail

Existing System

The Bristol City Hall is a four story building constructed in 1963. The building contains 58,289 sq. ft. of space consisting of offices and meeting space serving departments such as the Mayor's Office, City Treasurer, Clerk, Building and Parks Department, and Council Chambers. The building's exterior is concrete and brick veneer with window walls located at each column. The window walls span the entire height of the building and consist of pivoting and fixed vision windows and fixed non-vision spandrel glass windows with ceramic backing. The spandrel glass windows are not visible from inside the building because they are located above the plenum space and behind the induction units. The window systems have aluminum frames that are not thermally isolated and single pane glazing with exterior storms.

Proposed System

Ameresco proposes to replace the existing inefficient operable windows with new high efficiency windows. All aluminum frames will remain fastened to the concrete and masonry walls and existing spandrel glass panels will remain in place. New double glazed windows will be installed in all vision areas and new insulated panels will be installed at all opaque, spandrel glass sections. Insulation will be installed at the perimeter frames of new windows as well as sealant along the interior and exterior perimeters.

The following is the detailed scope of work.

- Demo and remove existing window sash from frames listed in table below.
- Existing frames and spandrel panels will be left intact.

"Page content is subject to Confidentiality Restrictions"

- Install windows with extended perimeter flange frame into cleared openings.
- New windows to be bronze color, aluminum frame window systems with double pane glazing and thermal breaks in place of the existing single pane, vision area window sashes. The bottom 50% of the newly installed vision windows will be a projection style operable section (bottom projected, open out) and the upper 50% section of vision window to be fixed. New windows to be Peerless G205 or equal thermal project out window. New double pane glazing to have U-factor of 0.363, low-e coating, and argon fill.
- Fixed insulated panels to be Mapes Industries with Kynar embossed aluminum finish. Panels to have 1" ISO foam core with total R-value of 6.4.
- Insulate the perimeter of new windows.
- Install new insulated panels with required receptor system over existing panels.
- Install interior perimeter snap trim around new windows.
- Install exterior mullion covers as required.
- Caulk new system on the interior and exterior.
- All material removed will be disposed based on EPA requirements.
- All freight, storage, and all associated transportation is included.
- Exclusions: All removal and installation of blinds/shades and furniture moving. Repair of any sills, headers, rot and mortar work. Exterior doors and double pane storefront window systems at building entrances are excluded from the scope.
- Asbestos abatement of the removed window sashes is included. Any remaining asbestos caulking on the existing frames to remain will be encapsulated behind the newly installed window systems and flashing.

Table 18.1: Proposed square feet of window replacements at City Hall

Window Type	Description	W (in.)	H (in.)	Quantity	Total Area (sq. ft.)
1	Operable Vision Window	34	78	190	3,448
2	Basement Operable Vision Window	34	59	29	397
3	Fixed Vision Window	40	116	4	128
4	Spandrel Glass with Ceramic Backing	34	30	76	535
5	Spandrel Glass with Ceramic Backing	34	66	162	2,487
6	Spandrel Glass with Ceramic Backing	34	20	16	74
7	Spandrel Glass with Ceramic Backing	34	55	2	25
TOTAL					**7,094**

"Page content is subject to Confidentiality Restrictions"

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

The new high efficiency window systems will greatly improve the thermal performance of the building envelope. New windows will reduce maintenance cost resulting from failing components in the existing window systems. Occupant comfort will be greatly improved due to new weather sealing at operable windows and along the perimeter frame.

Peerless G201

Project Out/Awning
Thermal Aluminum Window

AW-PG100-AP

PRODUCT FEATURES

Frame depth	3-1/4"
Typical wall thickness	.080"
Thermal break design	Polyamide strut
Maximum glass thickness	1"
Ext./Int. glazing material	Santoprene/Santoprene
U Value	.363

Peerless Project Out Series

Peerless has developed the cutting edge ENERGSAVE Aluminum framed windows and doors, which provide all of the advantage of Aluminum products while increasing the energy efficiency. The ENERGSAVE products reduce heat flow and air leakage in the overall design which includes — the Framing System, Glass System and Spacer system. The G200 series has been designed for energy efficiency, ease of operation and building security.

Energy Innovation from the Heartland of America

Peerless
ARCHITECTURAL WINDOWS & DOORS

ENERGSAVE

Peerless G201

G201 AW-PG100-AP

Project Out Awning Thermal Aluminum Window

BENEFITS

ARCHITECT

Energy Savings

- Unique .363 U Value for an AW project out window
- Less than many aluminum thermal project out windows

Third Party Certifications

- AAMA – certified window for performance
- IGCC – certified insulating glass for long life

Design Flexibility

- Unique frame design allows for multiple selection of glass types to meet low U values

Finish and Color Choices

- Exterior and interior colors can be different
- Standard or anodize paint colors

BUILDING OWNER

Building Security

- One handle engages all vent perimeter locks
- Optional key-operated handle equals no opening

Low Maintenance

- Vent hardware easy to adjust, if necessary
- Durable metal handles and hinges for long life

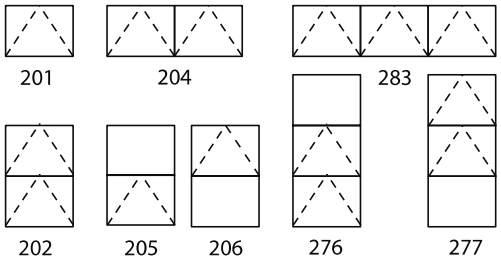
INSTALLER

Frame Choices

- Continuous head/sill/jamb eliminate mullions
- Flange designs can eliminate field trimming

Field Labor Reductions

- Easy-to-remove glass film keeps glass clean
- Dry exterior gaskets ensures interior reglazing



CERTIFICATION	G201
AAMA standard/specification	A440-08
Minimum test size	60" x 36"
Air infiltration rate @6.24 psf	.1 cfm/sf
Water test pressure	15 psf
Structural load test pressure	150 psf
*U Value	.363

*Test glass – 1/4" soft Low E x Argon x 1/4"

TYPICAL CONFIGURATIONS

ESM 21:
Boiler Replacement

ESM Overview

Ameresco proposes to replace the oil-fired hot water boiler serving the Fire Headquarters with a new high efficiency gas-fired equivalent boiler. Ameresco proposes as an option for the Police Court Building to replace the existing oil-fired steam boilers with new gas-fired equivalent steam boilers. A new natural gas service will be provided by Eversource to serve the new boilers. As part of the measure, the existing underground oil tanks will be removed along with all other fuel oil auxiliaries. The proposed measure will provide the buildings with higher efficiency systems as well as a less expensive fuel source for space heating and domestic hot water.

During the preliminary energy audit Ameresco identified additional boiler replacement measures which were not selected by the City.

Figure 21.1: Ameresco proposes to convert the existing boiler at the Fire HQ to natural gas.

ESM Detail

Existing System

>Police Court Building

The Police Court building is served by two (2) HB Smith 350 Mills sectional, cast iron, oil-fired boilers producing low pressure steam. Steam is passed through (2) heat exchangers to create heating hot water distributed throughout the building by zone pumps for terminal units and reheats. The remaining steam produced is distributed to four (4) steam coils serving four (4) AHUs located in the 2nd floor mechanical rooms. Additional hot water used for supplemental heating of the cell area and summer reheat is produced by a Weil-McLain 478, oil-fired boiler located in the boiler room.

>Fire Headquarters Building

Heating for the Fire Headquarters building is provided by an HB Smith oil-fired hot water boiler. Domestic hot water is currently provided by an A.O. Smith ProMax electric storage heater and a 75-gallon TriangleTube storage tank for supplemental storage. Fuel oil for the boiler is stored in a 4,000 gallon underground storage tank.

"Page content is subject to Confidentiality Restrictions"

Proposed System

>Police Court Building

As one option, Ameresco proposes to replace the existing oil-fired steam boiler serving the Police Court building with two (2) new gas-fired Weil-McLain 1088 steam boilers, or approved equal. Natural gas service will be brought to the building by Eversource and piped to the new boilers. The existing Weil-McLain 78 series hot water boiler in the boiler room will be converted from oil to gas.

The scope of work for this ESM includes all demolition, mechanical, and electrical work required to replace the existing HB Smith oil-fired boilers at the Police Court with a new gas-fired boilers. The scope of work details are:

Demolition

- Disable, drain, and legally dispose two (2) existing HB Smith 350 Mills boilers and burners, fuel oil piping, and burner control panels.
  - Disable and drain
  - Demo and dispose of steam supply pipe from existing boilers to the existing steam header, reuse existing isolation valves where possible
  - Close boiler isolation valves
  - Disconnect existing electrical service to breaker.
- Remove existing oil-fired burner serving Weil-McLain 78 Series Boiler.
- Existing Steam Header to be reused
- Remove existing boiler feed water tank and vacuum condensate receiver (located in boiler room in between boilers).
- Drain, demo, and remove the existing 8,000 gallon oil storage tank
  - Remove all associated piping
  - Insulate and seal all exterior penetrations left by removal of piping

Abatement

- Abatement of asbestos containing material that Ameresco has been made aware of in the boiler room includes piping elbows of existing steam piping. Any additional material proven to contain asbestos will require revised numbers.
- Based on the information provided a containment using Plastic sheeting, duct tape or similar to secure the sheeting, and all work will be performed under negative air pressure.
- When the work is completed there will be a final visual inspection and a PCM re-occupancy air test administered by a third party licensed asbestos Project Monitor.
- All asbestos containing material will be disposed of following state and federal guidelines for disposal of asbestos containing material.

Mechanical

- Provide and install two (2) Weil McLain 1088 Gas-fired Steam boilers on one of the existing 4" (5'x11') concrete housekeeping pad.

- Provide and install new 500 MBH Input gas-fired burner for existing Weil McLain 78 Series Hot Water Boiler
- Provide and install a new boiler feed water system sized for the new boilers and connect to new boilers per manufacture's specification, including electrical service.
- Provide and install a new duplex, vacuum type condensate transfer unit discharging to the boiler feed water unit tank. Provide and install the electric control panel with the control power switching relay and selector switches.
    - New unit to have a tank capacity of approximately 100 gallons
- Provide and install all isolation valves, pressure and temperature gauges, temperature probes, etc. to complete the near boiler piping as shown in manufacturer's installation layout.
- Provide and install boiler room piping, fittings, flanges, unions, and valves as needed to connect to each new boiler to existing supply header.
- Modify existing combustion air system as necessary to accommodate code requirements for the new steam boilers, including motorized dampers, louvers, and ducts, as required.
- Provide and install Owens Corning Fiberglass pipe insulation or equal per Connecticut energy code for all new cold water, heating steam supply, and heating condensate return piping, elbows, valves, fittings (except unions), and piping connections. Seal exposed fiberglass ends with white mastic waterproofing paint.
- Provide test and balance services within the boiler plant, and coordinate start-up with boiler manufacturer's representative.
- Provide Boiler 1st year service and maintenance per manufacturer's recommendations

Plumbing-Gas

- Run new 4" gas line to new boilers, approx.. 40 ft from new meter to boiler room. Provide isolation valves at each boiler.
- Provide new gas train to each boiler including Weil McLain 78 Series hot water boiler per manufacturer's piping diagram.
- Label all gas piping.

Electrical and Controls

- Reuse existing electric panel.
- Install power conduit and conductors to new boilers and accessories.
- Provide and install in the boiler room a Carbon Monoxide detector on the same circuit as the boilers, with a relay that disables the boilers in the event Carbon Monoxide is detected.
- Provide and install controls to two (2) new Weil McLain 1088 boilers as follows:

Steam Boilers – Mechanical Room

Point Name	Point Type	Count	Notes
Steam Pressure Setpoint	AO	1	Adjustable per sequence
Main Steam Supply Pressure	AI	1	Install Well Sensor
Boiler Start/Stop	DO	2	
Boiler Status	DI	2	Status from panel
Boiler Alarm	DI	2	Alarm relay from boiler control panel

"Page content is subject to Confidentiality Restrictions"

Condensate Pump Status	DI	2	Current Transducer
Condensate Pump start/stop	DO	2	
Combustion Air Fan	DO	1	Relay
Sub-Total Points		13	
Control Sequences: Steam Pressure Reset; Boiler Start/Stop			

>Fire Headquarters Building

Ameresco proposes to replace the existing oil-fired boiler serving the Fire Headquarters with a new gas-fired high-efficiency Lochinvar Knight hot water boiler, or approved equal. Natural gas service will be brought to the building by Eversource and piped to the new boiler. The existing electric storage heater will be removed and a new indirect Superstor Ultra (or approved equal) indirect tank will be installed and piped to the new boiler. The existing oil system will be removed including the underground oil tank and fuel oil pumps and piping.

The scope of work for this ESM includes all demolition, mechanical, and electrical work required to replace the existing HB Smith oil-fired boiler and electric domestic hot water storage heater at the Fire Headquarters with a new gas-fired boiler and indirect storage tank. The scope of work details are:

Demolition

- Demolish, remove and legally dispose of the existing HB Smith oil-fired hot water boiler and all associated equipment made obsolete by new work.
- Demolish, remove and legally dispose of existing A.O. Smith ProMax electric hot water heater and Triangle Tube storage tank and all associated equipment made obsolete by new work.
- Disable and remove existing fuel oil supply lines and equipment in the boiler room
- Disposal of remaining fuel oil and storage tank to be priced separately (see below).
- The existing circulator pumps shall be reused.

Mechanical

- Provide and install one (1) new Lochinvar Knight XL KBN601 boiler in place of existing HB Smith boiler on newly poured concrete pad.
    - Pour new 4" concrete housekeeping pad, dimensions - 48" x 28".
- Provide and install boiler room piping, fittings, flanges, unions, and valves as needed to connect to the existing supply and return headers.
- Provide and install condensate neutralizers and pipe boiler condensate to nearest floor drain.
- Provide and install approximately 15 LF of 4" PVC combustion air duct. Supply air ducts shall terminate through the sidewall of the boiler room.
- Provide and install 15 LF of 4" CPVC exhaust duct from the boiler to the sidewall reusing the existing hole from the existing exhaust pipe.
- Provide and install an air and dirt separator, Amtrol AX 60(V) expansion tank, and low water cutoff.
- Provide and install new testable backflow preventer in make-up water supply line.

"Page content is subject to Confidentiality Restrictions"

- Provide and install new Superstore Ultra indirect DHW tank, Model SSU-60 on new 4" housekeeping pad. Provide new B&G inline circulator sized for 30 gpm and 20' of head. Connect new DHW tank to boiler supply and return and to existing DHWS and CW/DHWR lines.
- Provide and install Owens Corning Fiberglass pipe insulation or equal per Connecticut energy code for all heating water supply and heating water return piping, elbows, valves, fittings (except unions), and piping connections. Seal exposed fiberglass ends with white mastic waterproofing paint.
- Fill new piping and coordinate start-up with boiler manufacturer's representative.
- Test and verify proper operation of all new equipment under all normal control sequences and alarm conditions, and make any corrections necessary for ongoing proper operation.

Plumbing-Gas

- New gas service will be provided outside existing boiler room.
- Bring gas service into boiler room through exterior wall.
- Run 10 LF new 1¼" gas line to new boiler/burner. Provide isolation valves at boiler.
- Provide new gas train to boiler per manufacturer's piping diagram.
- Label all gas piping.

Electrical and Controls

- Install power conduit and conductors to new boiler in mechanical room.
- Provide and install in the boiler room a Carbon Monoxide detector on the same circuit as the boiler, with a relay that disables the boiler in the event Carbon Monoxide is detected.
- New boiler to utilize built in controls.

Demo & Remove Fuel Oil Storage Tank

- Drain, demo, and remove the existing 4,000 gallon oil storage tank
- Remove all associated piping
- Insulate and seal all exterior penetrations left by removal of piping

Exclusions

The measure assumes the following:

- Existing isolation valves in steam/water piping are assumed to be in working order.
- Repair of existing valves and piping that shall be tied into as part of this scope of work is excluded.
- The existing building hot water distribution pumps shall remain and their replacement or repair is excluded.
- Work shall occur during normal business hours.
- Provision for temporary heat or other utilities is excluded.
- Additions or modifications to fire protection systems are excluded.

"Page content is subject to Confidentiality Restrictions"

- Any abatement or remediation of asbestos or other hazardous materials beyond that specifically called out to be included in the scope of work above is excluded from the scope and cost of the proposed work.
- Removal of any remaining oil left in the existing oil tanks is excluded. It is assumed that the City may transfer this oil to other facilities as needed and at their convenience.
- If oil leakage is discovered during removal of the underground oil tank Ameresco will stop all work and report back to the City. Remediation of any existing underground oil leaks is not included in the project.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

Energy savings will be realized by the improved efficiency of the boilers and the reduced cost of natural gas in comparison to oil and electricity.

KNIGHT® COMMERCIAL BOILER XL

The Smartest Choice for Condensing Boiler Performance

The KNIGHT® XL, engineered with Lochinvar's exclusive SMART SYSTEM™ control and an array of other innovative features, places it far ahead of any commercial heating boiler in its class. It promises and delivers ultimate ease of installation and maintenance. With up to 94.6% thermal efficiency, low-NOx emissions and a fully modulating burner, it is the best "green choice" for today's environmentally focused market.

Five modulating/condensing stainless steel KNIGHT XL boilers are available with 399,000–800,000 Btu/hr inputs and remarkably small space-saving footprints. All are equipped for direct-vent installation with air intake and exhaust runs up to 100 feet using PVC, CPVC, Polypropylene or AL29-4C vent materials. This range of choices is ideal for light-duty applications such as small hotels, schools and office buildings. For higher-demand applications, up to eight KNIGHT XL units can be installed utilizing the built-in cascading sequencer to deliver up to 6.4 million Btu/hr heating capacity.

THE KNIGHT XL BOILER reflects Lochinvar's constant commitment to providing all the options you need to serve every application.

KNIGHT XLs installed and commissioned by Black & McDonald

Advanced Negative Regulation Technology

KNIGHT XL safely and reliably operates with supply gas pressure as low as 4 inches water column. Negative Regulation (Neg/Reg) technology automatically adjusts fan speed that ensures the correct volume and mix of fuel and air throughout the firing range.

Two-in-One Stainless Steel Heat Exchanger

A primary heat exchanger combined with a secondary heat exchanger captures flue gas heat and condenses to utilize available latent energy. The stainless steel, pH-tolerant design features a weld-sealed assembly with no O-rings or gaskets and does not require special glycol. ASME Section IV approved and stamped.

Fully Modulating Burner

The SMART SYSTEM allows fully modulating combustion with 5:1 turndown. The burner can fire as low as 20% of maximum input and modulates the firing rate up to 100% as demand increases. The burner is a single stainless steel assembly covered with woven steel mesh and fires in a 360° pattern along the entire length of the primary heat exchanger. This allows the compact KNIGHT XL to exceed the capacity of units with larger multiple burners.

Direct Venting up to 100 Feet

KNIGHT XL offers 7 venting options and tremendous flexibility for placement of units within the building, because it permits direct-vent air intake and exhaust runs up to 100 equivalent feet using either PVC, CPVC, Polypropylene or AL29-4C stainless steel vent pipe. A sidewall vent termination kit is shipped standard with every KNIGHT boiler.

Sidewall Vent Termination

Sidewall Vent Termination

Lochinvar SMART SYSTEM™

Refined Design Puts More Control and Information at your Fingertips

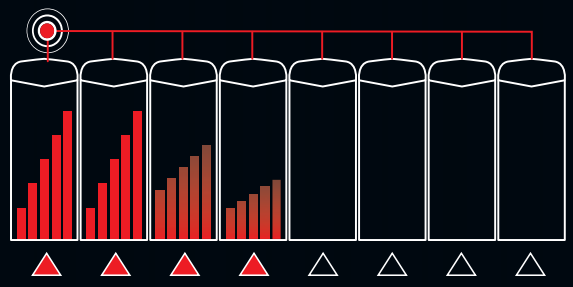
Advanced features include:

- Multi-Color Graphic LCD Display
- Navigation Dial
- USB Port
- Ability to control up to three different setpoint temperatures
- Compatibility with Copper-Fin II Non-Condensing Boiler to Create a Front-End Loading System
- Boilers with Different Inputs can be Cascaded Together to Maximize Boiler Plant Turndown
- Modbus Capability (Optional)
- DHW Modulation Limiting
- DHW Night Setback*
- 0-10 VDC Boiler Rate Output
- 0-10 VDC Signal to control variable speed boiler pump*
- 0-10 VDC System Pump Signal Input*
- Heat Demand from 0-10V Input
- Installer Can Program Name and Number into the Boiler
- Installer Adjustable Freeze Protection Parameters
- Separately adjustable SH/DHW Switching times*
- Installer access to BMS and ramp delay settings

**Exclusive to Lochinvar Smart System*

At-a-Glance Color Coding

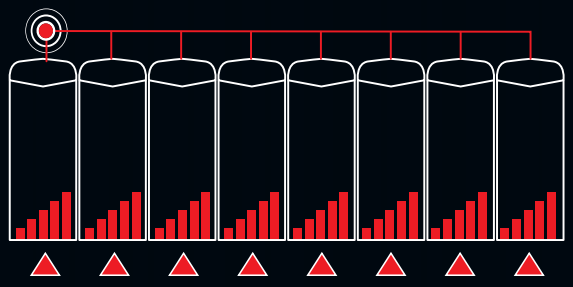
Blue Screen
Normal system operation.



Yellow Screen
Maintenance due - shows the installer's name and number on the display.

Red Screen
Lockout mode.

New Selectable Cascade Options

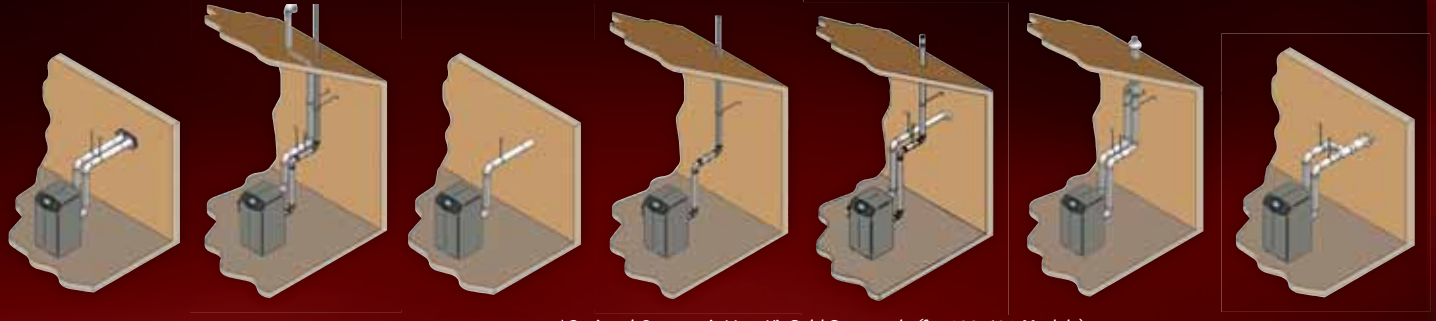


When multiple KNIGHT boilers are installed together, the SMART SYSTEM built-in sequencer can be set for "Lead-Lag" cascade or "Efficiency Optimized" cascade operation.

Lead-Lag Cascade

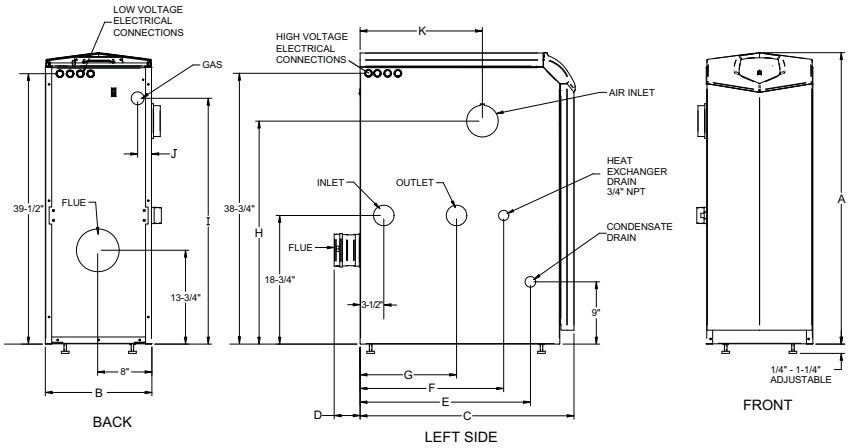
The "lead" boiler modulates with demand to capacity. As demand increases, additional boilers fire and modulate to capacity. This continues, with additional boilers firing and modulating to capacity until all units are operating. Every 24 hours, the SMART SYSTEM automatically shifts the lead boiler role to the next in the sequence, distributing lead-lag runtimes equally.

Efficiency Optimized Cascade



This feature optimizes the modulation capabilities of the Boiler Plant while evenly distributing run time across all cascaded boilers. Every 24 hours the SMART SYSTEM automatically shifts the 1st boiler on role to the next in the sequence, distributing run time equally.

SMART SYSTEM Cascade option allows 2 - 8 boilers to be sequenced.



7 Flexible Venting Options

Direct Vent Sidewall | **Direct Vent Vertical** | **Room Air Sidewall** | **Room Air Vertical** | **Vertical w/Sidewall Air** | **Direct Vent Vertical*** | **Direct Vent Sidewall***

**Optional Concentric Vent Kit Sold Separately (for 400-601 Models)*

Standard Features

- **94% Thermal Efficiency**
- **Modulating Burner with 5:1 Turndown**
  - Direct-Spark Ignition
  - Low NOx Operation
  - Sealed Combustion
  - Low Gas Pressure Operation
- **ASME Stainless Steel Heat Exchanger**
  - ASME Certified, "H" Stamped Gasketless Heat Exchanger
  - 160 psi Working Pressure
  - 50 psi ASME Relief Valve
  - Highly efficient, condensing design
- **Vertical & Horizontal Direct-Vent**
  - Category IV venting up to 100 feet
  - PVC, CPVC, Polypropylene or AL29-4C Venting up to 100 Feet
  - Factory Supplied Sidewall Vent Termination
- **Smart System Control**
- **Other Features**
  - On/Off Switch
  - Adjustable High Limit w/ Manual Reset
  - Automatic Reset High Limit
  - Flow Switch
  - Flue Temperature Sensor
  - Low Air Pressure Switch
  - Temperature & Pressure Gauge
  - Adjustable Leveling Legs
  - Condensate Trap
  - Zero Clearances to Combustible Material
  - 10 Year Limited Warranty (See Warranty)

Smart System Features

- **SMART SYSTEM Digital Operating Control**
  - Multi-Color Graphic LCD Display w/ Navigation Dial
  - **Three Reset Temperature Inputs with curves for three set point temperature inputs**
  - **Built in Cascading Sequencer for up to 8 Boilers**
  - Multiple Size Boiler Cascade
  - Front end loading capability with Copper Fin II
  - Lead Lag
  - Efficiency Optimization
  - **Outdoor Reset Control with Outdoor Air Sensor**
  - **Programmable System Efficiency Optimizers**
  - Night Setback
  - DHW Night Setback
  - Anti-Cycling
  - Outdoor Air Reset Curve
  - Ramp Delay
  - Boost Temperature & Time
  - **Three Pump Control**
  - System Pump With Parameter for Continuous Operation
  - Boiler Pump With Variable Speed Pump Control*
  - Domestic Hot Water Pump
  - **Domestic Hot Water Prioritization**
  - DHW tank piped with priority in the boiler loop
  - DHW tank piped as a zone in the system with the pumps controlled by the Smart System
  - DHW Modulation Limiting
  - Separately Adjustable SH/DHW Switching Times*
  - **Building Management System Integration**
  - 0-10 VDC Input to Control Modulation or Set Point
  - 0-10 VDC Input Signal from Variable Speed System Pump*
  - 0-10 VDC Modulation Rate Output
  - 0-10 VDC Input to Enable/Disable call for heat
  - Access to BMS Settings through Display
- **High Voltage Terminal Strip**
  - 120 VAC / 60 Hertz / 1 Phase Power Supply
  - Three sets of Pump Contacts with Pump Relays
- **Low Voltage Terminal Strip**
  - 24 VAC Device Relay
  - Proving Switch Contacts
  - Flow Switch Contacts
  - Alarm on Any Failure Contacts
  - Runtime Contacts
  - DHW Thermostat Contacts
  - 3 Space Heat Thermostat Contacts
  - System Sensor Contacts
  - DHW Tank Sensor Contacts
  - Outdoor Air Sensor Contacts
  - Cascade Contacts
  - 0-10 VDC BMS External Control Contact
  - 0-10 VDC Boiler Rate Output Contacts
  - 0-10 VDC Variable Speed System Pump Signal Input
  - 0-10 VDC Signal to Control Variable Speed Boiler Pump
  - Modbus Contacts
- **Time Clock**
- **Data Logging**
  - Hours Running, Space Heating
  - Hours Running, Domestic Hot Water
  - Ignition Attempts
  - Last 10 Lockouts
- **Other Features**
  - Low Water Flow Safety Control & Indication
  - Password Security
  - Inlet & Outlet Temperature Readout
  - Customizable Freeze Protection Parameters
  - Custom Maintenance Reminder with Contractor Info

**Exclusive feature, available only from Lochinvar*

Firing Codes

- M9 Standard Construction
- M7 California Code
- M13 CSD1 / FM / GE Gap (KB501-KB801)

Optional Equipment

- Alarm Bell
- Condensate Neutralization Kit
- Concentric Vent Kit (KB400-KB601)
- BMS Gateway to LON or BacNet
- High & Low Gas Pressure Switches w/ Manual Reset (KB501-KB801)
- Variable Speed Boiler Circulation Pump
- MODBUS Communication
- Multi Temperature Loop Control
- Low Water Cutoff w/Manual Reset & Test
- Constant Speed Boiler Circulation Pump
- SMART SYSTEM PC Software
- Stainless Steel Vent Kits (KB701-KB801)

ESM 23:
Steam to Hot Water Conversion

ESM Overview

Ameresco proposes to convert the heating systems serving the City Hall and Police Court building from steam to hot water. At City Hall, the existing Columbia boilers will be converted from oil-fired boilers producing steam to gas-fired boilers producing hot water. The steam heating coils serving the existing air handling units will be replaced with hot water coils, sized to provide the same heating capacity. In addition the existing electric hot water storage heater providing domestic hot water (DHW) to City Hall will be replaced with a new gas-fired high efficiency storage heater.

Figure 23.1: Ameresco proposes to convert the existing boilers at the City Hall from Steam producing to Hot Water boilers.

The existing oil-fired steam boilers at the Police Court building will be replaced with new high-efficiency gas-fired hot water boilers. The steam heating coils serving the existing air handling units will be replaced with hot water coils, sized to provide the same heating capacity. New natural gas service will be provided by Eversource to serve the new boilers. As part of this measure, the existing underground oil tank at the Police Court will be removed along with all other fuel oil auxiliaries.

This measure will generate energy savings by enabling the Police Court building to utilize higher efficiency hot water boilers. Condensing hot water boilers can achieve up to 99% thermal efficiency compared to about 82% for newer Steam boilers. There will also be savings at the City Hall and Police Court by reducing distribution losses since steam boilers operate at a higher temperature and are more susceptible to heat loss. Failed steam traps are also a cause of system inefficiency. Steam is allowed to blow by failed traps and can unintentionally be distributed through condensate return lines causing overheating and occupant discomfort.

The proposed measure will provide the building with a higher efficiency system as well as a less expensive fuel source for space heating and domestic hot water.

"Page content is subject to Confidentiality Restrictions"

ESM Detail

Existing System

>Bristol City Hall

The building is heated by (2) Columbia MPH-60 cast iron, oil-fired boilers that produce low pressure steam. Steam is fed to three (3) heat exchangers that produce hot water, and nine (9) steam coils serving five (5) AHUs. A temporary electric storage heater located in the maintenance room provides domestic hot water to the building.

>Police Court Building

The Police Court building is served by two (2) HB Smith 350 Mills sectional, cast iron, oil-fired boilers producing low pressure steam. Steam is passed through (2) heat exchangers to create heating hot water distributed throughout the building by zone pumps for terminal units and reheats. The remaining steam produced is distributed to four (4) steam coils serving four (4) AHUs located in the 2nd floor mechanical rooms. Additional hot water used for supplemental heating of the cell area and summer reheat is produced by a Weil-McLain 478, oil-fired boiler located in the boiler room. Domestic Hot Water is supplied to the building from a 116 gallon Rheem Ruud ES120-18-G electric storage heater located in the mechanical room next to the boiler room.

Proposed System

>Bristol City Hall

Ameresco proposes to convert the two (2) existing oil-fired Columbia MPH-60 steam boilers at City Hall to gas-fired hot water boilers. The steam heating coils serving the existing air handling units will be replaced with hot water coils, sized to provide the same heating capacity.

The scope of work for this ESM includes all demolition, mechanical, and electrical work required to convert the existing oil-fired Columbia steam boilers to gas-fired hot water, removing the steam infrastructure and installing a new hot water infrastructure including new hot water coils to serve the AHU's. A new gas-fired storage heater is also included to provide domestic hot water to the building. Natural gas service will be brought to the building by Eversource and piped to the new boiler. The existing oil system will be removed including the underground oil tank and fuel oil pumps and piping. The scope of work details are:

Demolition

- Disable, drain two (2) existing Columbia MPH-60 oil-fired steam boilers and remove breeching in boiler room.
- Demolish and remove all steam and condensate piping in boiler room, all steam and condensate runouts and risers, and all steam piping in the penthouse mechanical room.
- Disable and remove existing indirect domestic hot water storage tank located next to the boilers.
- Drain, demo, and remove the existing 8,000 gallon oil storage tank
    - Remove all associated piping

- Insulate and seal all exterior penetrations left by removal of piping
- Tank located next to 8,000 gallon oil storage tank serving the Police Court building.

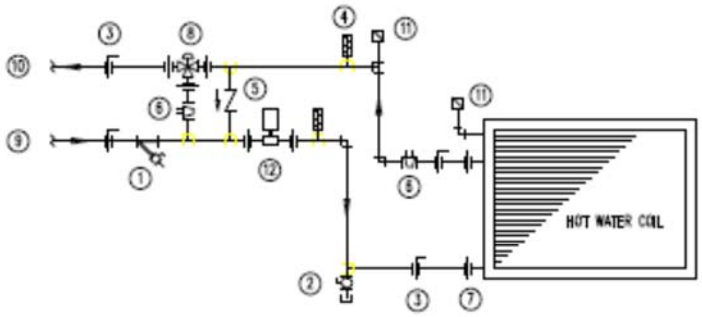
Abatement

- Abatement of asbestos containing material that Ameresco has been made aware of in the boiler room and penthouse mechanical room includes piping elbows of existing steam piping. Any additional material proven to contain asbestos will require revised numbers.
- Based on the information provided a containment using Plastic sheeting, duct tape or similar to secure the sheeting, and all work will be performed under negative air pressure.
- When the work is completed there will be a final visual inspection and a PCM re-occupancy air test administered by a third party licensed asbestos Project Monitor.
- All asbestos containing material will be disposed of following state and federal guidelines for disposal of asbestos containing material.

Mechanical – Boiler Room

- Convert the two (2) existing Columbia MPH-60 steam boilers to hot water including for each boiler:
  - Existing Danfoss pressure controls to be replaced with aquastat controls
  - Remove steam water columns on boilers
  - Remove pump controls
  - Re-use secondary low water cut-off (install float control)
  - Convert L91B modulating burner control to T91 modulating burner control
  - Replace existing Safety valve with relief valve
  - Same supply outlet exists for steam as new hot water supply outlet in boiler
  - Provide and install all isolation valves, check valves, pressure and temperature gauges, temperature probes, etc. to complete the boiler piping as shown in the manufacturer's installation layout.
  - Provide and install boiler room piping, fittings, flanges, unions, and valves as needed to connect to the existing supply and return pipe stubs in the main boiler room. New piping shall be welded Schedule 40 steel pipe, ASTM B36.10.
  - Provide and install two (2) Taco or equal primary circulators inline with existing boilers, 150 gpm, 25' hd.
  - Existing building loop pumps shall remain and be reused.
  - Provide and install Owens Corning Fiberglass pipe insulation or equal per Connecticut energy code for all new heating water supply, and heating water return piping, elbows, valves, fittings (except unions), and piping connections. Seal exposed fiberglass ends with white mastic waterproofing paint.
  - Fill new piping, provide test and balance services within the boiler plant, and coordinate start-up with boiler manufacturer's representative.
  - Label all new piping.

"Page content is subject to Confidentiality Restrictions"



Mechanical-Piping

Install Hydronic Piping and Coils

The scope of work includes all mechanical work required to install new hot water supply and return piping and hot water coils in place of the existing steam coils.

- Provide and install hot water supply and return distribution piping, fittings, flanges, unions, and valves.
  - Penthouse Risers are located above the condensate tank in the boiler room
    - Approx. 60 feet 2" risers from boiler room to penthouse
  - Runout in penthouse to be approx. 65 ft of 2" to 1 ½" pipe.
  - New supply and return runouts and risers to existing mechanical rooms will reuse existing floor and wall penetrations from removed steam and condensate piping.
  - Install all new valves, strainers, temperature and pressure gauges, etc
  - Provide and install two (2) hot water (1.5 HP) Pumps serving new hot water coil loop providing 50 GPM @ 50 Ft head.
  - Provide and install wells for a new differential pressure sensor. Sensor and control wiring shall be provided by others (controls contractor).
  - Provide and install Owens Corning Fiberglass pipe insulation or equal per Connecticut energy code for all new heating water supply, and heating water return piping, elbows, valves, fittings (except unions), and piping connections. Seal exposed fiberglass ends with white mastic waterproofing paint.
  - Label all new piping.
- Install seven (7) hot water heating coils in place of removed steam heating coils
  - Coils to be installed in place of removed steam heating coils
  - Provide and install a freeze protection pump system with each new pre-heat coil, typical to schematic below.
  - Install control valves

Plumbing – Domestic Hot Water

The scope of work includes all mechanical, plumbing, electrical, required to replace the existing DHW heater with one (1) new gas-fired high efficiency storage heater as described as follows:

- Disconnect and remove the existing 30-gallon temporary electric storage heater located in the maintenance room.
- Disconnect from existing cold water and hot water supply piping
- Disconnect from existing hot water recirculation piping
- Install one (1) new A.O. Smith Cyclone BTX-80 (50 gallon, 76,000 BTU/Hr input) or similar.
- Place new unit on new prefab concrete blocks in the open space left by the removed old indirect hot water tank.
- Install all new piping required to reconnect existing cold water and hot water piping to the new system as per manufactures' specifications
- Reconnect existing DHW recirculation piping and install new recirc pump to be controlled based on occupancy.
- Furnish and install new natural gas piping from the existing meter location to the new equipment
- Provide new CPVC sealed exhaust and combustion air through the sidewall of the boiler room.
- Insulate all new hot water and cold water piping
- Include all required electrical work
- Provide start-up and tuning

Plumbing-Gas

- To serve the conversion, Eversource will extend their intermediate pressure gas main approximately 1,680' on Laurel & North Main Streets to serve the City Hall, Police Court, and Fire HQ buildings.
- The two (2) boilers at the City Hall are Columbia MPH-60's (each with 2,520 MBH input) with Webster Cyclonetic Gas-Oil fired burners (MN: JB2C-10-RM7800L-M15-MP-UL-FM) that are currently only set up to burn oil.
    - Connect to existing gas meter outside boiler room
        - Provide and install new 4" gas piping approximately 115' from new gas meter in back of Maintenance office to burners.
        - Penetrate through boiler room sidewall and seal all penetrations
        - Connect new gas piping to existing burners per manufacturer's instructions
        - Provide and install all isolation valves
    - Provide all testing and balancing for burners and burner accessories
    - Provide startup and commissioning for burners and accessories
    - Provide all required wiring
    - Label all gas piping.

Electrical and Controls

- Install power conduit and conductors to new boiler,
- New Controls: Provide additional controls to the boiler plant.

>Police Court Building

The scope of work for this ESM includes all demolition, mechanical, and electrical work required to replace the existing HB Smith oil-fired steam boilers and domestic hot water storage heater with two (2) new gas-fired boilers and indirect storage tank. The existing Weil McLain boiler will also be equipped with a new gas-fired burner. The scope of work details are:

Demolition

- Disable, drain, and legally dispose the two (2) existing HB Smith 350 Mills oil-fired steam boilers fuel oil piping, and burner control panels.
- Remove existing oil-fired burner serving Weil McLain 78 Series Boiler.
- Remove and legally dispose of the existing electric 120 gallon hot water heater located in the adjacent room.
- Cut and cap the boiler flue at the masonry chimney.
- Remove and legally dispose of the existing condensate receiver, pumps, housekeeping pad, and related appurtenances.
- Demolish and remove all steam and condensate piping in boiler room.
- Demolish and remove steam and condensate runouts and risers leading to penthouse mechanical room.
- Remove and legally dispose of the existing Zone 1 and Zone 2 steam to hot water heat exchangers (HX-1 and HX-2) and associated steam piping.

Abatement

- Abatement of asbestos containing material that Ameresco has been made aware of in the boiler room and penthouse mechanical room includes piping elbows of existing steam piping. Any additional material proven to contain asbestos will require revised numbers.
- Based on the information provided a containment using Plastic sheeting, duct tape or similar to secure the sheeting, and all work will be performed under negative air pressure.

"Page content is subject to Confidentiality Restrictions"

- When the work is completed there will be a final visual inspection and a PCM re-occupancy air test administered by a third party licensed asbestos Project Monitor.
- All asbestos containing material will be disposed of following state and federal guidelines for disposal of asbestos containing material.

Mechanical – Boiler Room

- Provide and install two (2) Lochinvar Crest FBN2500 boilers on one of the existing 4" (5'x11') concrete housekeeping pad.
- Provide Boiler 1st year service and maintenance per manufacturer's recommendations.
- Provide and install one new 500 MBH Input gas-fired burner for existing Weil McLain 78 Series Hot Water Boiler
- Provide and install all isolation valves, check valves, pressure and temperature gauges, temperature probes, etc. to complete the near boiler piping as shown in the manufacturer's installation layout.
- Provide and install boiler room piping, fittings, flanges, unions, and valves as needed to connect to the existing supply and return headers. New piping shall be welded Schedule 40 steel pipe, ASTM B36.10. Potable water piping shall be hard-drawn Type L copper tube, ASTM B88. Gasketed, crimp-type fittings such as ProPress are acceptable for use with copper tubing.
- Provide and install condensate neutralizers and pipe boiler condensate to nearest floor drain.
- Provide and install 8" PVC combustion air ducts approx. 25'. Supply air ducts shall terminate through the sidewall with screen cap.
- Provide and install 9" Saf-T Vent exhaust duct from each boiler. Exhaust flues shall terminate through side wall (25') through Generator room and up 15'. Refer to manufacturer's recommended breeching layout.
- Reusing existing zone pumps.
- Provide and install two (2) new ½ HP pumps to serve new AHU hot water coils (providing 35 GMP @ 30 Ft Head).
- Provide and install new Superstore Ultra indirect DHW tank, Model SSU-80C on existing housekeeping pad. Provide new B&G inline circulator sized for 24 gpm and 20' of head (P-4). Connect new DHW tank to boiler supply and return and to existing DHWS and CW/DHWR lines.
- Provide and install new Spirotherm air-dirt separator VDT250 in new boiler supply header. Provide and install new pad-mounted expansion tank(s).
- Provide and install Owens Corning Fiberglass pipe insulation or equal per Connecticut energy code for all new cold water, DHW, heating water supply, and heating water return piping, elbows, valves, fittings (except unions), and piping connections. Seal exposed fiberglass ends with white mastic waterproofing paint.
- Fill new piping, provide test and balance services within the boiler plant, and coordinate start-up with boiler manufacturer's representative.
- Label all new piping.

"Page content is subject to Confidentiality Restrictions"

Install Hydronic Piping and Coils

The scope of work includes all mechanical work required to install new hot water supply and return piping and hot water coils in place of the existing steam coils.

- Provide and install hot water supply and return distribution piping, fittings, flanges, unions, and valves.
  - Ground floor runouts to be approx. 190 ft of 2" pipe.
  - Approx. 40 feet 2" risers from boiler room to penthouse Mechanical Room
  - 2nd Floor Mechanical runouts to be 50 ft. of 1" pipe to HVAC-1 Mech room, and approx.. 40 ft. of 1½" pipe runout to HVAC-2 thru HVAC-4.
  - New supply and return runouts and risers to existing mechanical rooms will reuse existing floor and wall penetrations from removed steam and condensate piping.
  - Install all new valves, strainers, temperature and pressure gauges, etc
  - Provide and install two (2) hot water (½ HP) Pumps serving new hot water coil 25 GPM @ 30 Ft. Head.
  - Provide and install wells for a new differential pressure sensor. Sensor and control wiring shall be provided by others (controls contractor).
  - Provide and install Owens Corning Fiberglass pipe insulation or equal per Connecticut energy code for all new heating water supply, and heating water return piping, elbows, valves, fittings (except unions), and piping connections. Seal exposed fiberglass ends with white mastic waterproofing paint.
  - Label all new piping.
- Provide and install four (4) hot water coils in place of removed steam coils
  - Install four (4) new hot water control valves
  - Provide and install control valves and actuators
- Install all new valves, strainers, temperature and pressure gauges, etc

Desig.	Location	Service	New Type of Coil	Existing MBH	Existing Dimensions	Supply CFM
HVAC-1	PENTHOUSE 1	1st floor top section, 1st floor lobby	Hot Water Coil	306.2	60"x120"	20,965
HVAC-2	PENTHOUSE 2	1st floor below section	Hot Water Coil	61.6	60"x120"	21,745
HVAC-3	PENTHOUSE 3	2nd Fl Interview, Narcotics	Hot Water Coil	334.6	89"x114"	30,390
HVAC-4	MECH RM B	Court #1,2, Jury Assembly Rm	Hot Water Coil	223.2	33"x104"	10,085

Plumbing-Gas

- Provide and install new Schedule 40 metallic gas line to new boilers. Provide isolation valves at each boiler (40 LF of 4" pipe).
- Provide new gas train to each boiler per manufacturer's piping diagram.
- Label all gas piping.

"Page content is subject to Confidentiality Restrictions"

Electrical and Controls

- Provide and install new electric panel.
- Install power conduit and conductors to new boilers, circulators, and accessories.
- Provide and install in the boiler room a Carbon Monoxide detector on the same circuit as the boilers, with a relay that disables the boilers in the event Carbon Monoxide is detected.
- New Controls: Provide controls to the new boiler plant:

Hot Water Boilers – Mechanical Room

Point Name	Point	Count	Notes
Hot Water Supply Temperature Setpoint	AO	1	Adjustable per sequence
Main HW Supply Temp	AI	1	Install Well Sensor
Main HW Return Temp	AI	1	Install Well Sensor
Boiler Start/Stop	DO	2	
Boiler Status	DI	2	Status from panel
Boiler Alarm	DI	2	Alarm relay from boiler control panel
Hot Water Pump Status	DI	2	Current Transducer
Hot Water Pump start/stop	DO	2	
Domestic Hot Water Pump Status	DI	1	Current Transducer
Domestic Hot Water Pump start/stop	DO	1	
Domestic Hot Water Storage Temp	AI	1	Install Well Sensor
Sub-Total Points		**16**	
Control Sequences: Hot Water Reset with DHW Priority; Pump Run Time Equalization; Boiler Start/Stop with pump control; Pump Run Time			

LON Card included from the boiler manufacturer

Demo & Remove Fuel Oil Storage Tank

- Drain, demo, and remove the existing 8,000 gallon oil storage tank
  - Remove all associated piping
  - Insulate and seal all exterior penetrations left by removal of piping
  - Tank located next to 8,000 gallon oil storage tank serving the City Hall.

Exclusions

The measure assumes the following:

- Existing boilers are assumed to be in working order.
- Existing isolation valves in gas, steam, and water piping are assumed to be in working order.
- Repair of existing valves and piping that shall be tied into as part of this scope of work is excluded.
- The existing building hot water distribution pumps shall remain and their replacement or repair is excluded.
- Work shall occur during normal business hours.
- Provision of temporary heat or other utilities is excluded.
- Additions or modifications to fire protection systems are excluded.

"Page content is subject to Confidentiality Restrictions"

- Any abatement or remediation of asbestos or other hazardous materials beyond that specifically called out to be included in the scope of work above is excluded from the scope and cost of the proposed work.
- Removal of any remaining oil left in the existing oil tanks is excluded. It is assumed that the City may transfer this oil to other facilities as needed and at their convenience.
- If oil leakage is discovered during removal of the oil tank Ameresco will stop all work and report back to the City. Remediation of any existing oil leaks is not included in the project.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

Energy savings will be realized by the improved efficiency of the boiler and the reduced cost of natural gas in comparison to oil and electricity.

HIGH EFFICIENCY COMMERCIAL BOILERS

CREST®

CONDENSING BOILER

SMART TOUCH™

WITH MODBUS PROTOCOL,
CASCADING SEQUENCER AND
FRONT-END LOADING CAPABILITY

- 5 INPUTS FROM 2.5 TO 5.0 MILLION BTU/HR
- FIRING RATE MODULATION UP TO 20:1
- DIRECT-VENT FLEXIBILITY TO 100 FEET
- FLEXIBLE FLOW RATES UP TO 350 GPM

UP TO 99%
THERMAL EFFICIENCY

LOW NOx Certified
PROTECTING OUR ENVIRONMENT

Lochinvar
HIGH EFFICIENCY BOILERS & WATER HEATERS

CREST®
CONDENSING BOILER

Fire Tube Innovation up to 5.0 Million BTU

Lochinvar® has taken the fire-tube concept in an innovative new direction with the CREST® modulating-condensing boiler. With sizes that range from 2.5 to 5.0 million Btu/hr, you have the opportunity to utilize Lochinvar leading-edge technology in your largest applications. With thermal efficiencies up to 99% in low water temperature applications, CREST is positioned to provide exceptional energy-saving performance.

The advanced CREST introduces a combustion system with a unique burner design with up to 20:1 turndown. The burner fires into an array of 316L stainless steel fire-tubes that transfer the heat to the surrounding water with exceptionally high efficiency.

CREST communicates seamlessly and in real time with building management systems by utilizing an on-board MODBUS protocol. The SMART TOUCH™ control has a built-in cascading component that communicates with up to eight units, providing total command without an external control or complex and expensive control logic programming by the BMS integrator.

Yes, innovative fire-tube boiler technology integrated with our SMART TOUCH™ operating control makes the CREST a genuine game-changer among commercial boilers.

Advanced Negative Regulation Technology

CREST safely and reliably operates with supply gas pressure as low as 4 inches water column. Because Negative Regulation (Neg/Reg) technology draws fuel gas into a pre-mix combustion system instead of relying on utility pressure through the gas valve, operation is steady in low gas pressure systems or when peak demands occur on supply lines. Plus, Neg/Reg automatic fan speed control fine-tunes the correct fuel/air ratio entering the burner, providing even, consistent combustion for a cleaner burning flame achieving high combustion efficiency.

Fully Modulating up to 20:1 Turndown

20:1 turndown means the burner can fire at a rate as low as 5% of its maximum input. For example, a 2.5 million Btu/hr CREST unit can modulate from 125,000 up to 2,500,000 Btu/hr depending on demand. High turndown greatly reduces “short cycling” when demand is low. All boiler systems are designed to provide enough heat to maintain a facility’s heat loss on the coldest days. When the system is zoned, the CREST’s high turndown works to match the actual system demand and, in return, reduces the customer’s fuel bill and provides better comfort by load matching the heat loss of the system. Greater seasonal efficiencies will be realized due to the extremely large turndown offered by CREST.

As Low As 25 GPM* to Full 350 GPM Flow Rates

CREST allows system designers tremendous flexibility to vary the flow rate through the boiler. It can service systems that operate with widely fluctuating flow rates depending on demand. CREST can be installed with primary/secondary piping or in a full-flow arrangement. Typical design techniques include full-flow systems or variable flow systems using variable frequency drives on the heating water pumps. In either case, CREST excels in these applications and allows the flow through the boiler to vary based on system demand.

** 25 GPM min. flow on FB2500-3000 models, 45 GPM on FB3500-4000 models and 50 GPM on FB5000.*

LOW NOx Certified
PROTECTING OUR ENVIRONMENT

The CREST Combustion System

CREST's top-mounted, single micro metal fiber burner is actually "two combustion systems in one," each with its own blower/gas valve assembly to power the combustion process from air/gas intake to driving heat energy down and through the fire-tubes to exhaust venting through the bottom of the unit.

In a 2 Million BTU/Hr CREST Boiler

The upper portion of the burner fires first and, with 5:1 turndown, modulates from 125,000 to 625,000 Btu/hr.

When demand exceeds 625,000 Btu/hr., the lower portion of the burner fires and modulates from 470,000 to 1,875,000 Btu/hr.

With the entire burner firing at capacity, the total input is 625,000 + 1,875,000 = 2,500,000 Btu/hr.

The CREST's patent-pending dual-system design is truly an industry first!

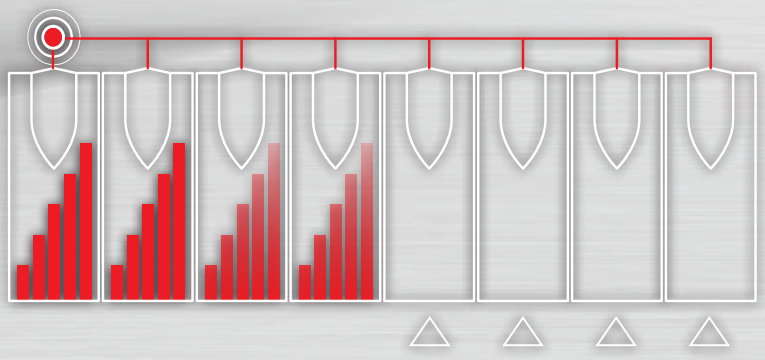
The CREST Heat Exchanger

Heat energy and combustion products flow downward into fire-tubes from the burner.

Energy from inside fire-tubes heats water flowing through the heating vessel.

As water is heated, it flows up through the heating vessel and out into the system.

Cold water returning from the system enters the heating vessel to maximize efficiency.

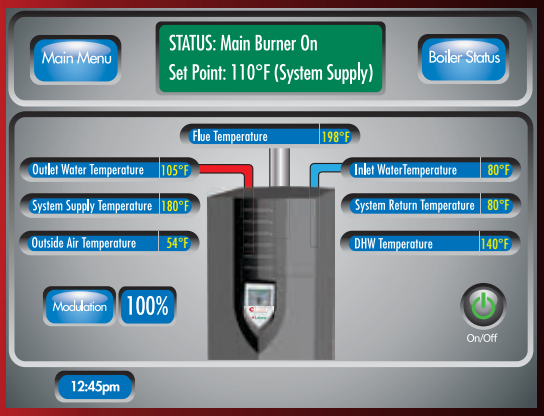


Condensate is drained into a stainless steel collector, to be piped to a suitable floor drain.

The flue outlet is located at the bottom of the unit.

Built-in Cascading Sequencer

Sequences up to an 8-boiler system using simple 2-wire daisy-chain connection, eliminating cost and uncertainty of separate "third party" sequencer. On demand, one boiler functions as the leader and modulates to capacity. Increasing load then "cascades" to additional "lag" boilers in sequence as needed. Lead-lag rotation shifts "first on" boiler role every 24 hours, distributing equal lead-lag runtimes to each unit.

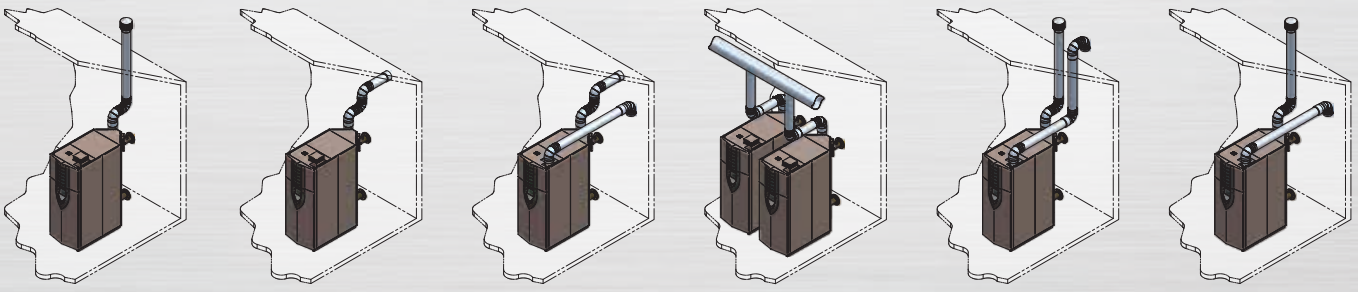


CREST's ability to sequence up to eight units that each have as much as 20:1 turndown means that the combined system has the potential of operating with modulation of up to 160:1 turndown. A bank of eight 2.5M Btu CRESTs would be able to provide as little as 125,000 Btu/hr and as much as 20,000,000 Btu/hr of heating output. In addition, the CREST Cascade can be set for "Efficiency Optimization" with each boiler firing at the same low BTU/hr input rates to receive the benefits of the highest thermal efficiency.

Unequaled Control and Monitoring Functions That Are Easy to Use

The CREST features Lochinvar's popular, all-in-one SMART TOUCH™ operating control. Amplified with an 8-inch touchscreen, the multi-color interface offers the best info-graphics and visual control content in the boiler industry today. It is smartly dressed with distinctive features and control parameters. It provides the operator with outstanding functionality, ease of operation and customized data retrieval. The CREST's SMART TOUCH control can be integrated directly into a Building Automation System via ModBus protocol and other communication protocols via a gateway device.

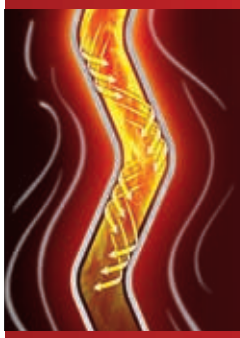
SMART TOUCH™



- MODBUS COMMUNICATION
- BUILDING MANAGEMENT SYSTEM CONTROL
- PC CONNECTION
- OUTDOOR RESET
- NIGHT TEMPERATURE SETBACK
- HOT WATER GENERATOR COMPATIBILITY
- SYSTEM AND BOILER PUMP CONTROLS
- FREEZE PROTECTION
- PRODUCT SERVICE DUE INDICATOR
- PASSWORD SECURITY

Direct-Venting up to 100 Feet

CREST offers 6 venting options and tremendous flexibility for placement of units within the building, because it permits direct-vent air intake and exhaust runs up to 100 equivalent feet using AL29-4C stainless steel (Category IV) vent pipe. Intake and exhaust runs can terminate horizontally through a sidewall or vertically through the roof. Additionally, CREST boilers installed in multiples of 2 or more can be common-vented, eliminating much of the time and material cost of venting multiple boilers individually.



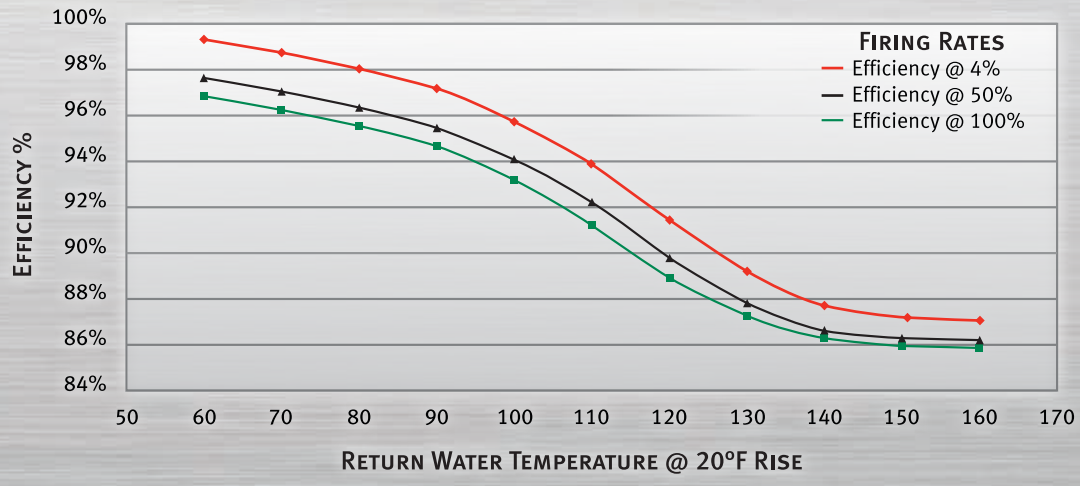
Room Air Vertical | **Room Air Sidewall** | **Direct-Vent Sidewall** | **Common-Vent*** | **Direct-Vent Vertical** | **Vertical w/Sidewall Air**

**Contact Lochinvar for information on common venting of CREST boilers.*

The Industry's First Wave™ Fire-Tube Boiler Is Also the Industry's Best

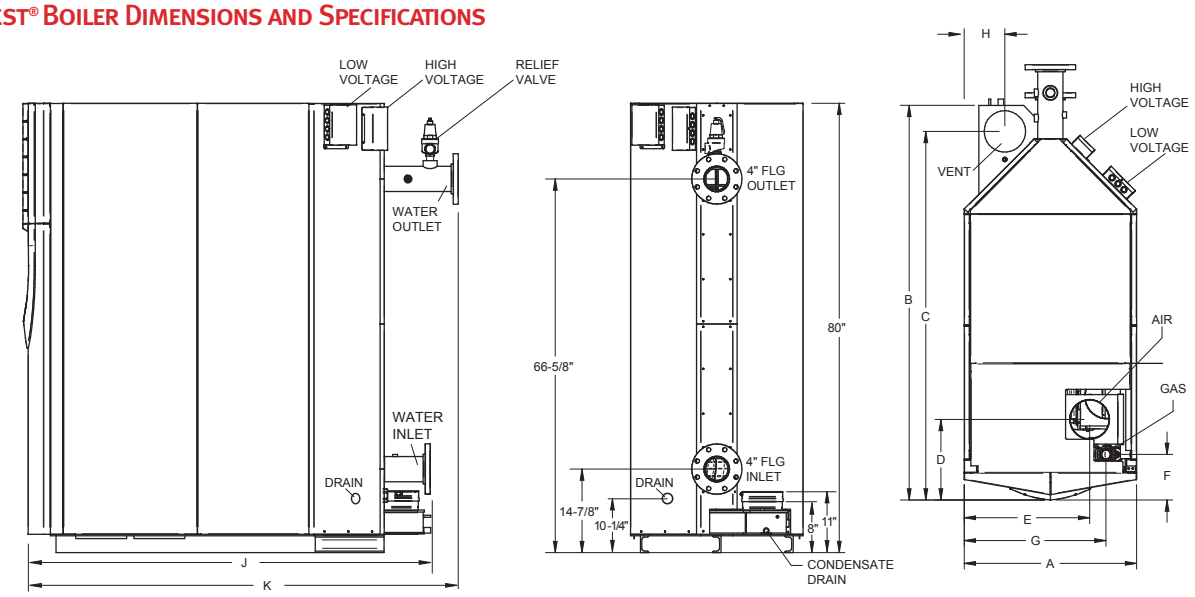
Through an extensive research and design program, Lochinvar has taken fire-tube boiler technology to a new level. The CREST® boiler features the Wave™ 316L stainless steel fire-tube. Each CREST Fire Tube has a larger input capacity than other industry fire-tubes, which means fewer tubes and welds. This exclusive, new design provides superior heat transfer in every fire-tube.

The Wave™ fire-tube employs a unique wave pattern that creates turbulence as the flue gas products flow down the tube, scrubbing the energy from the flue products. The Wave™ design also enhances the life of the heat exchanger by allowing the fire-tubes to flex, operating stress-free with none of the adverse effects suffered by traditional fire-tube boilers.



Each fire-tube is welded into the heat exchanger vessel and surrounded by water. The heat transfer process is enhanced by the water's counterflow. As the water flows up inside the vessel, the super-heated flue products flow down the fire-tube. With one pass, the heat is effectively captured from the flue products reaching condensing temperatures. At the top of the vessel, the combustion chamber is also water-backed for additional heat transfer.

Finally, the CREST heat exchanger can operate with flow rates from as low as 25 GPM* to 350 GPM, comfortably suited to a wide variety of boiler system designs.



** 25 GPM min. flow on FB2500-3000 models, 45 GPM on FB3500-4000 models and 50 GPM on FB5000.*

Smart Touch™ Features

- **SMART TOUCH™ Touchscreen Operating Control**
- **Full-Color 8" Touchscreen LCD Display**
- **Built-in Cascading Sequencer for up to 8 Boilers**
  - Cascade Multiple Sized Boilers
  - Lead/Lag Cascade
  - Efficiency Optimized Cascade
- **Front-End Loading Capability with CopperFin II and Powerfin Boilers**
- **Building Management System Integration with 0-10 VDC Input**
- **Modbus Communications**
- **Outdoor Reset Control with Outdoor Air Sensor**
- **Password Security**
- **Domestic Hot Water Prioritization**
  - DHW tank piped with priority in the boiler loop
  - DHW tank piped as a zone in the system with the pumps controlled by the Smart System
  - DHW Modulation Limiting
  - Separately Adjustable SH/DHW Switching Times
- Low Water Flow Safety Control & Indication
- Inlet & Outlet Temperature Readout
- Freeze Protection
- Service Reminder
- Time Clock
- **Data Logging**
  - Hours Running, Space Heating
  - Hours Running, Domestic Hot Water
  - Hours Running, Modulation Rate
  - Ignition Attempts
  - Last 10 Lockouts

  - Ramp Delay
  - Boost Temperature & Time
- **Three Pump Control**
  - System Pump
  - Boiler Pump
  - Domestic Hot Water Pump
- **High-Voltage Terminal Strip**
  - 120 VAC / 60 Hertz / 1 Phase Power Supply (FB2500-3500)
  - 208 VAC / 60 Hertz / 3 Phase Power Supply (FB4000-5000)
  - System Pump, Boiler Pump and DHW Pump Power
- **Low-Voltage Terminal Strip**
  - 24 VAC Auxiliary Device Relay
  - Auxiliary Proving Switch Contacts
  - Alarm on Any Failure Contacts
  - Runtime Contacts
  - DHW Thermostat Contacts
  - Unit Enable/Disable Contacts
  - System Sensor Contacts
  - DHW Tank Sensor Contacts
  - Outdoor Air Sensor Contacts
  - Cascade Contacts
  - 0-10 VDC BMS External Control Contact

Optional Equipment

- Alarm Bell
- BMS Gateway - BACnet or LonWorks
- Condensate Neutralization Kit
- SMART TOUCH PC Software
- Common Vent Kits
- Dual Fuel Gas Train
- Electrical Options (Shipped Loose):
  - 208V/3Ø/60Hz (Models FB2500-3500 only)
  - 480V/3Ø/60Hz
  - 600V/3Ø/60Hz
- Motorized Isolation Valve
- Variable Speed Boiler Pump

Codes & Registrations

- ANSI Z21.13/CSA Certified
- ASME certified, "H" Stamp / National Board
- California Code Compliant
- CSD1 / Factory Mutual / GE Gap Compliant
- South Coast Air Quality Management District Qualified
- Canadian Registration Number (CRN)
- AHRI Certified

Standard Features

- Up to 93% Thermal Efficiency (AHRI)
- Up to 99% Thermal Efficiency in Low Temperature Applications
- Modulating Burner with up to 20:1 Turndown
- Direct-Spark Ignition
- Low-NOx Operation
- Sealed Combustion
- Low Gas Pressure Operation
- Vertical or Horizontal Venting
- Category IV Venting up to 100 Feet
- ASME "H" Stamped Heat Exchanger
- 316L Stainless Steel Fire Tubes
- 160 psi Working Pressure
- On/Off Switch
- Adjustable High Limit with Manual Reset
- Low Water Cutoff with Manual Reset & Test
- High & Low Gas Pressure Switches w/Manual Reset
- Low Air Pressure Switches
- Condensate Trap w/ Blocked Drain Switch
- Drain Valve
- System Sensor
- Outdoor Air Sensor
- Inlet & Outlet Temperature Sensors
- High Voltage Terminal Strip
- Low Voltage Terminal Strip
- Downstream Gas Test Cocks
- 50 psi ASME Relief Valve
- Temperature & Pressure Gauge
- Zero Clearances to Combustible Materials
- 10-Year Limited Warranty (See Warranty for Details)
- 1-Year Warranty on Parts (See Warranty for Details)

Registered Under U.S. Patent #8286594

About Aerofin

Founded in 1923, Aerofin Corporation is a leading manufacturer of finned tube heat exchanger coils and related heat transfer equipment and accessories:

- Process gas coolers and heaters
- Transformer oil coolers
- Fan/coil units
- Integral face and bypass coils
- Frames for coil removal
- Airside transitions and drain pans
- Moisture Eliminators

We also specialize in engineered applications and arrangements:

- Transferring heat from special gas streams and fluids
- Problem solving for corrosion and contamination
- Handling extremes in pressures and temperatures
- Designing for seismic conditions

Aerofin products serve a variety of industries:

- HVAC
- Fossil fuel power generation
- Nuclear power generation
- Industrial processes
- Pulp and paper
- Automotive
- Petrochemical

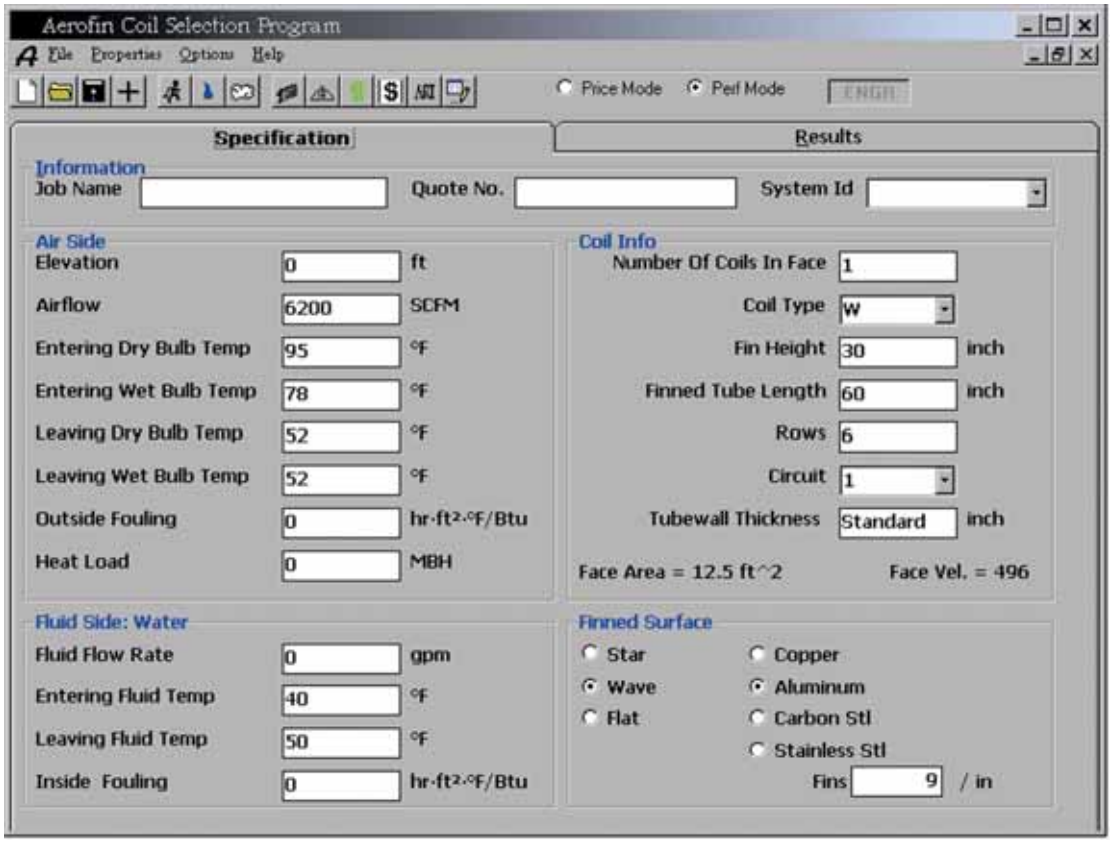
Aerofin Main Office and Manufacturing Facility—Lynchburg, Virginia
Regional Aerofin Offices throughout the United States and Canada

Call 1-800-AEROFIN (237-6346) for the Aerofin office nearest you.

Quality Statement

Aerofin is ISO 9001 certified.

Our Mission—To provide our customers with quality solutions to their heat transfer equipment needs. Our goal is to be recognized as the leading and most responsive manufacturer in the industry.



Our Commitment—Design and manufacture of heat exchangers that meet the highest standards of technical performance and conform to the quality expectations of our customers.

ARI Ratings

Our coil ratings have been established in accordance with the standards of the Air Conditioning and Refrigeration Institute (ARI). Aerofin's in-house test lab is ARI certified, and test data collected is evaluated in accordance with ARI Standard 410. To monitor coil performance, sample coils are provided to ARI annually for testing and evaluation.

Selection Method

Coil selections are made using one of the most advanced Windows-based computer programs in the industry. The program's speed, flexibility and extensive help screens make selecting both new and replacement coils simple and straightforward. The program is available upon request from the home office in Lynchburg, Virginia or from any regional Aerofin sales office.

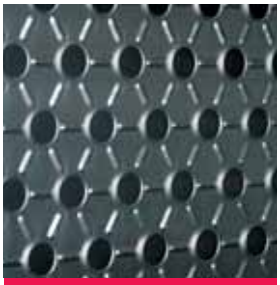

plate fin coils

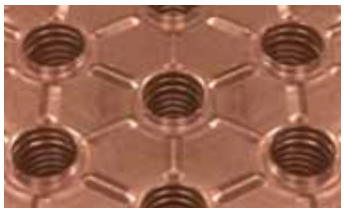
Quality HVAC and Custom Engineered Heat Transfer Equipment for over 75 years

Visit our website today, www.aerofin.com

Energy Flow® Coils

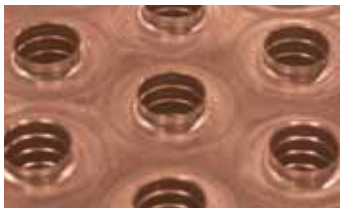
Energy Flow® Plate Fin water coils are used for heating, cooling and dehumidifying. In addition to water, a variety of other heating and cooling media can be used such as glycol and brine solutions and thermal oils. Standard heating and cooling coils using steam, water or glycol are designed for applications up to 400 degrees F and 250 psig, except Type WR and WRC coils which are for use at 100 psig and 160 degrees F or less. Custom engineered solutions are available to meet your unique application requirements.

Construction Features



Standard Fin Designs

All Energy Flow® coils feature flat or patterned plate fins of aluminum, copper, stainless steel or carbon steel. The fins are permanently attached to the tubes by expansion of each tube. Full fin collars allow for both precise fin spacing and maximum fin-to-tube contact. Three standard plate fin patterns are available:



WAVE FIN

The wave fin corrugation across the fin provides the maximum heat transfer rate for a given surface area, and is the standard fin configuration used.

STAR FIN

The star fin pattern corrugation around the tubes provides lower air friction. This pattern is used when lower air friction is desired without a large decrease in heat transfer capacity.

FLAT FIN

The flat fin has no corrugation, which results in the lowest possible air friction drop and lowest fan horsepower demands.

Tubes

All standard Energy Flow® coils feature 5/8" OD or 1" OD seamless copper tubes conforming to ASTM specifications. Standard 5/8" OD tube wall thickness is 0.020 inches, except Type WR and WRC coils, which use 0.025 inch wall. Standard 1" OD tube wall thickness is 0.035 inches. Heavier wall tubing is available. Copper-nickel, aluminum, stainless steel and carbon steel are available material options.

Tube Joints

With the exception of type WR and WRC coils which feature roller-expanded tube joints, all joints for Energy Flow® heating and cooling water coils are brazed. All joints for steam heating coils are silver brazed. Aerofin brazers and welders are ASME qualified. Optional tube materials may require welded joints; call Aerofin for help in choosing the right materials for your needs.

Headers

With the exception of type WR and WRC coils, standard Energy Flow® coils feature carbon steel or non-ferrous headers with threaded pipe connections (other materials are available). Water coils are supplied with vents and drains. Type WR and WRC cooling coils use carbon steel tube sheets and removable carbon steel headers with threaded connections.

Aerofin Main Office and Manufacturing Facility—Lynchburg, Virginia
Regional Aerofin Offices throughout the United States and Canada

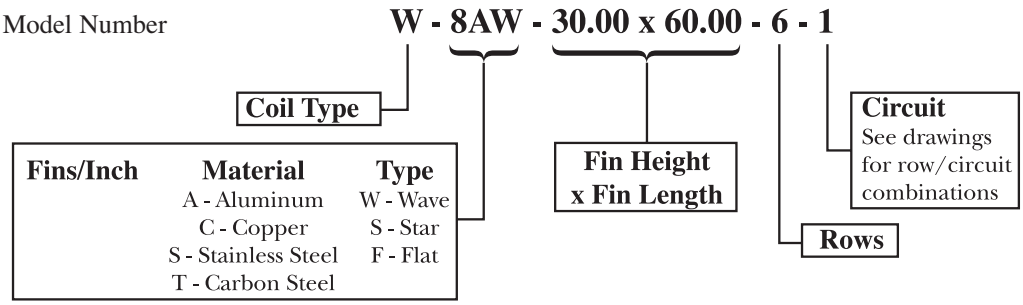
Call 1-800-AEROFIN (237-6346) for the Aerofin office nearest you.

Casings

Energy Flow® coil casings are heavy gauge galvanized steel designed for high strength, durability and are double flanged for coil stacking. Coil casings are furnished without mounting holes unless required. Stainless steel, aluminum and other casing materials are available material options. Special configurations are available such as welded casings for airtight applications.

Circuits

With a wide selection of standard circuits, Aerofin can optimize fluid velocity, maximize heat transfer, and minimize fluid pressure loss. Special circuits can also be engineered to meet special performance requirements.



Testing

Aerofin's standard coil test is performed with 300 psig air under water. Type WR and WRC coils are tested hydrostatically to 150 psig. Higher design and test pressures are available for special applications.

Ordering Instructions

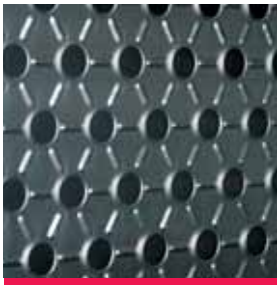
To place an order for an Aerofin Energy Flow® coil, specify the following:

1. Model Number

2. Header material

3. Tube material and tube wall thickness

4. Casing material (specify if mounting holes are required)



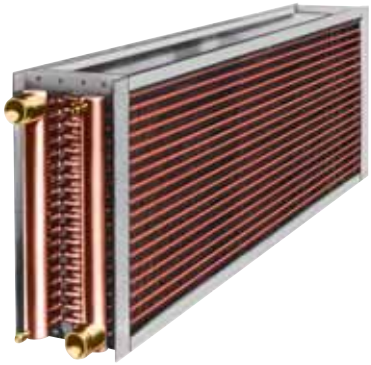
5. Connection type (NPT-M, Victaulic, Butt Weld, or Flanged), specify if top or bottom supply

6. Horizontal or vertical airflow

7. Left-hand or right-hand arrangement (water coils only) Note: standard construction is for horizontal airflow, right hand bottom supply unless specified otherwise

EXAMPLE

Model number W - 8AW - 30.00 x 60.00 - 6 - 1, carbon steel headers, copper tubes with .020 wall, galvanized steel casing, NPT-M connections, right-hand bottom supply for horizontal airflow.



cooling plate fin coils

AEROFIN

Quality HVAC and Custom Engineered Heat Transfer Equipment for over 75 years

Visit our website today, www.aerofin.com

Energy Flow® Type W

Standard 5/8" OD tube coil for heating and cooling

Type W coils are the standard plate fin water coils, used for both heating and cooling applications. A typical latent and sensible cooling load requires from 4 to 12 rows of aluminum or copper plate fin surface. Standard construction includes threaded connections on carbon steel or non-ferrous supply and return headers. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Energy Flow® Type WD

Standard 5/8" OD tube coil with intermediate drain headers for heating and cooling

Similar to type W coils, type WD coils feature intermediate drain headers located on the rows between the supply and return headers. The intermediate drain headers enhance drainability and help coils drain more quickly and thoroughly. Coils should be installed pitched towards the piping connection end. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Energy Flow® Type WR

Cleanable 5/8" OD tube coil with dual removable headers for heating and cooling

Type WR coils differ from type W coils in that removable headers are supplied instead of pipe manifolds. This design allows access to the internal tubes for inspection and cleaning from either end of the coil. The headers are baffled to direct the fluid flow for numerous circuiting options, with vents and drains provided in the individual compartments. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Energy Flow® Type WRC

Cleanable 5/8" OD tube coil with a single removable header for heating and cooling

Similar to type WR coils, type WRC coils have a removable header on the piping connection end only. The opposite end has return bends, making the type WRC coil very useful in applications where access to the opposite end is limited. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Regional Aerofin Offices throughout the United States and Canada

Call 1-800-AEROFIN (237-6346) for the Aerofin office nearest you.

Energy Flow® Type HW

Standard 5/8" OD tube coil for heating and cooling

Type HW coils are used with hot water, glycols, or steam and are available in 1 or 2 row configurations. Standard construction includes threaded connections on carbon steel or non-ferrous supply and return headers. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Energy Flow® Type HWP

5/8" OD tube duct booster coil for heating

Type HWP duct booster coils are used with hot water or steam, available in 1 or 2 row configurations. Threaded female connections are provided at the inlet and outlet tube locations in lieu of manifold headers. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Energy Flow® Type HD

5/8" OD tube non-freeze steam coil for heating

Type HD steam coils are designed for freezing air, heating applications. The non-freeze design is accomplished with inner-distributing tubes (tube within a tube construction). Outer finned tubes are 5/8" OD. Tubes are pitched for horizontal air flow. For vertical air flow, coil must be installed pitched towards the header end for positive condensate drainage. Type HD coils are available with 1 or 2 rows and are typically used for applications with low to moderate steam condensate loads. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Energy Flow® Type HM

1" OD tube non-freeze steam coil for heating

Similar to HD coils, type HM steam coils use 1" OD finned outer tubes. These coils feature tube within a tube construction, and tubes are pitched for horizontal airflow. For vertical airflow, this coil type must be installed pitched toward the header end for positive condensate drainage. Type HM coils are only available with 1 row and are used for applications with high steam condensate loads. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

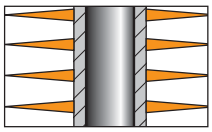
spiral fin coils

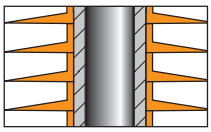
Quality HVAC and Custom Engineered Heat Transfer Equipment for over 75 years

Visit our website today, www.aerofin.com



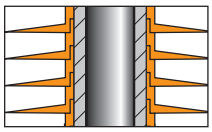
Aerofin® Coils

Aerofin® Spiral Fin water coils are used for heating, cooling and dehumidifying. In addition to water, a variety of other heating and cooling media can be used such as glycol and brine solutions and thermal oils. Standard heating and cooling coils using steam, water or glycol are designed for applications up to 400 degrees F and 250 psig, except Type R and RC coils which are for use at 100 psig and 160 degrees F or less. Custom engineered solutions are available to meet your unique application requirements.

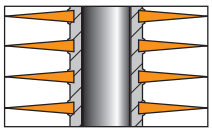


Construction Features

Standard Fin Designs



Aerofin® Spiral Fin coils feature fins of aluminum, copper, stainless steel or carbon steel. The fins are tension wound onto individual tubes to minimize thermal contact resistance and air friction. Tapered fin design provides maximum fin-to-tube contact for optimum heat transfer. Individually finned tubes allow unrestricted movement of the tubes, eliminating stress on the tube joints and fin to tube bond caused by thermal cycling.



EDGEWOUND FINS

Tubes

All standard Aerofin® coils feature 5/8" OD or 1" OD seamless copper tubes conforming to ASTM specifications. Standard 5/8" OD tube wall thickness is 0.020 inches, except Type R and RC coils, which use 0.025 inch wall. Standard 1" OD tube wall thickness is 0.035 inches. Heavier wall tubing is available. Copper-nickel, aluminum, stainless steel and carbon steel are available material options.

Tube Joints

With the exception of type R and RC coils which feature roller-expanded tube joints, all joints for Aerofin® heating and cooling coils are brazed. All joints for steam heating coils are silver brazed. Aerofin brazers and welders are ASME qualified. Optional tube materials may require welded joints; call Aerofin for help in choosing the right materials for your needs.

Headers

With the exception of type R and RC coils, standard Aerofin® coils feature carbon steel or non-ferrous headers with threaded pipe connections (other materials are available). Water coils are supplied with vents and drains. Type R and RC cooling coils use carbon steel tube sheets and removable carbon steel headers with threaded connections.

Aerofin Main Office and Manufacturing Facility—Lynchburg, Virginia
Regional Aerofin Offices throughout the United States and Canada

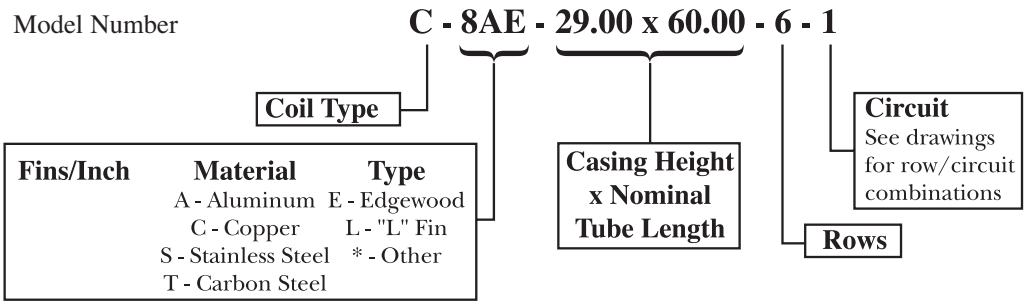
Call 1-800-AEROFIN (237-6346) for the Aerofin office nearest you.

Casings

Aerofin® coil casings are heavy gauge galvanized steel designed for high strength, durability and are double flanged for coil stacking. Tube supports are provided on various centers to support the tubes and to provide extra support during handling and coil stacking. Coil casings are furnished without mounting holes unless required. Stainless steel, aluminum and other casing materials are available material options. Special configurations are available such as welding casings for airtight applications.

Circuits

With a wide selection of standard circuits, Aerofin can optimize fluid velocity, maximize heat transfer, and minimize fluid pressure loss. Special circuits can also be engineered to meet special performance requirements.



Testing

Aerofin's standard coil test is performed with 300 psig air under water. Type R and RC coils are tested hydrostatically to 150 psig. Higher design and test pressures are available for special applications.

Ordering Instructions

To place an order for an Aerofin® Spiral Fin coil, specify the following:

1. Model Number

2. Header material

3. Tube material and tube wall thickness

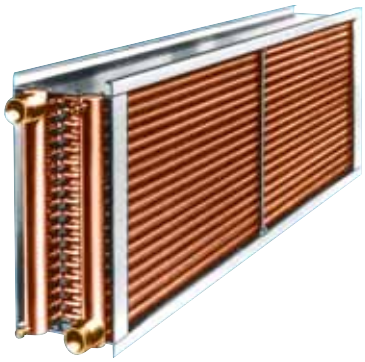
4. Casing material (specify if mounting holes are required)

5. Connection type (NPT-M, Victaulic, Butt Weld, or Flanged), specify if top or bottom supply

6. Horizontal or vertical airflow

7. Left-hand or right-hand arrangement (water coils only) Note: standard construction is for horizontal airflow, right hand bottom supply unless specified otherwise

EXAMPLE



Model number C - 8AE - 29.00 x 60.00 - 6 - 1, carbon steel headers, copper tubes with .020 wall, galvanized steel casing, NPT-M connections, right-hand bottom supply for horizontal airflow.

cooling spiral fin coils

Quality HVAC and Custom Engineered Heat Transfer Equipment for over 75 years

Aerofin® Type C

Standard 5/8" OD tube coil for heating and cooling

Type C coils are the standard spiral fin water coils, used for both heating and cooling applications. A typical latent and sensible cooling load requires from 4 to 12 rows of aluminum or copper fin surface. Standard construction includes threaded connections on carbon steel or non-ferrous supply and return headers. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type CD

Standard 5/8" OD tube coil with intermediate drain headers for heating and cooling

Similar to type C coils, type CD coils feature intermediate drain headers located on the rows between the supply and return headers. The intermediate drain headers enhance drainability and help coils drain more quickly and thoroughly. Coils should be installed pitched towards the piping connection end. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type R

Cleanable 5/8" OD tube coil with dual removable headers for heating and cooling

Type R coils differ from type C coils in that removable headers are supplied instead of pipe manifolds. This design allows access to the internal tubes for inspection and cleaning from either end of the coil. The headers are internally baffled to direct the fluid flow for numerous circuiting options, with vents and drains provided in the individual compartments. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type RC

Cleanable 5/8" OD tube coil with a single removable header for heating and cooling

Similar to type R coils, type RC coils have a removable header on the piping connection end only. The opposite end has return bends, making the type RC coil very useful in applications where access to the opposite end is limited. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

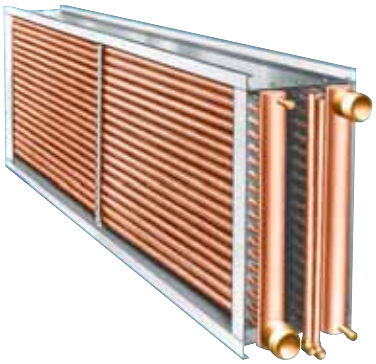
Regional Aerofin Offices throughout the United States and Canada

Call 1-800-AEROFIN (237-6346) for the Aerofin office nearest you.

Aerofin® Type CP (P-Fin)

Standard 5/8" OD tube coil for heating and cooling



Similar to type C coils, type CP coils feature 1/2" high fins which deliver enhanced heat transfer in a given face area with extremely low air friction. This fin height also minimizes moisture carryover. Standard construction includes threaded connections on carbon steel or non-ferrous supply and return headers. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type CDP (P-Fin)

Standard 5/8" OD tube coil with intermediate drain headers for heating and cooling

Similar to type CP coils, type CDP coils feature intermediate drain headers located on the rows between the supply and return headers. The intermediate drain headers enhance drainability and help coils drain more quickly and thoroughly. Coils should be installed pitched towards the piping connection end. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type RP (P-Fin)

Cleanable 5/8" OD tube coil with dual removable headers for heating and cooling

Similar to type R coils, type RP coils feature 1/2" high fins which deliver enhanced heat transfer in a given face area with extremely low air friction. This fin height also minimizes moisture carryover. Removable headers allow access to the internal tubes for inspection and cleaning from either end of the coil. The headers are internally baffled to direct the fluid flow for numerous circuiting options, with vents and drains provided in the individual compartments. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type RCP (P-Fin)

Cleanable 5/8" OD tube coil with a single removable header for heating and cooling

Similar to type RP coils, type RCP coils have a removable header only on the piping connection end. The opposite end has return bends, making the type RCP coil very useful in applications where access to the opposite end is limited. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type CH

Standard 5/8" OD tube coil for heating and cooling

Type CH coils are used with hot water, glycols, or steam and are available in 1 or 2 row configurations. Standard construction is carbon steel supply and return headers and threaded connections.This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type MP

5/8" OD tube duct booster coil for heating

Type MP duct booster coils are used with hot water or steam, available in 1 or 2 row configurations. Threaded female connections are provided at the inlet and outlet tube locations in lieu of manifold headers.This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type FNF

5/8" OD tube non-freeze steam coil for heating

Type FNF steam coils are designed for freezing air, heating applications. The non-freeze design is accomplished with inner-distributing tubes (tube within a tube construction). Outer finned tubes are 5/8" OD. Tubes are pitched in two directions within the casing for positive condensate drainage in either horizontal airflow or vertical airflow mounting positions. Type FNF coils are available with 1 or 2 rows and are typically used for applications with low to moderate steam condensate loads. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type ANF

1" OD tube non-freeze steam coil for heating

Similar to FNF coils, type ANF steam coils use 1" OD finned outer tubes. This coil type features tube within a tube construction, and tubes pitched in two directions for horizontal or vertical airflow. Type ANF coils are available with 1 or 2 rows and are used for applications with high steam condensate loads. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Download dimensional drawings at www.aerofin.com

Aerofin Main Office and Manufacturing Facility—Lynchburg, Virginia
Regional Aerofin Offices throughout the United States and Canada

Call 1-800-AEROFIN (237-6346) for the Aerofin office nearest you.

Aerofin® Type CHP (P-Fin)

5/8" OD tube hot water coil with 1/2" high fins for heating

Type CHP coils are used with hot water, glycols, or steam and are available in 1 or 2 row configurations. Standard construction is carbon steel supply and return headers and threaded connections. 1/2" high fins deliver enhanced heat transfer in a given face area with extremely low air friction. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type CHS

5/8" OD tube steam coil for heating

Type CHS heating coils are specially designed steam coils used with entering air temperatures above freezing, and are available in a 2 row configuration. Standard construction is carbon steel supply and return headers, return bends and threaded connections. Center supply connection ensures even steam distribution. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

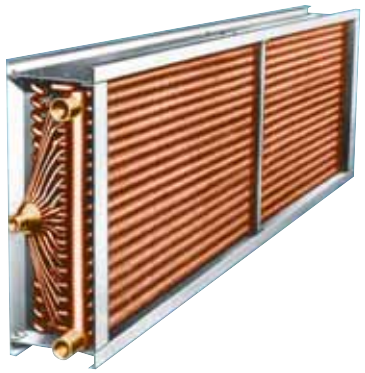
Aerofin® Type FLEX

5/8" OD tube steam coil for heating with flexible tubes for thermal expansion and contraction

Type FLEX coils are for demanding applications where frequent cycling occurs due to intermittent operation. The “S” shaped tubes absorb thermal expansion and contraction without causing undue joint stress. Standard construction is carbon steel supply and return headers (opposite end) and threaded connections. Type FLEX coils are available in 1 or 2 rows. They are typically used for applications with low to moderate steam condensate loads. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Aerofin® Type AFLEX

1" OD tube steam coil for heating with flexible tubes for thermal expansion and contraction



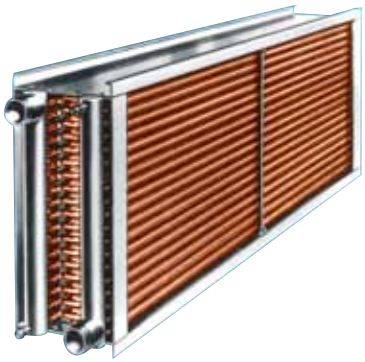
Similar to Type FLEX coils, Type AFLEX coils use 1" OD finned tubes. The “S” shaped tubes absorb thermal expansion and contraction without causing undue joint stress. Standard construction is carbon steel supply and return headers (opposite end) and threaded connections. Type AFLEX coils are available in 1 or 2 rows and are typically used for applications with high steam condensate loads.

Quality HVAC and Custom Engineered Heat Transfer Equipment for over 75 years

Visit our website today, www.aerofin.com

Aerofin® Type DP

5/8" OD tube coil for cooling with refrigerant.



Type DP coils are direct expansion type (using refrigerant) which employ distributors that disperse refrigerant equally to all multiple circuits. Parallel/reverse flow ensures superheat. Standard construction is non-ferrous suction header(s), return bends and sweat connections. Equivalent plate fin coil is denoted as Type E.

Aerofin® Type ASH

1" OD outer tubes and 5/8" OD inner distributing tubes for boiler air preheating, removable core, same end connections.

Type ASH coils are used for heating with steam and feature a “removable core” design. This enables the coil to become an easily replaceable unit contained in a permanently mounted frame. Standard construction is carbon steel or stainless steel header, carbon steel or stainless steel tubes, embedded fins, welded joints, plugged tube ends and same end connections.

Aerofin® Type LRB

1" OD tube coil for heating and cooling with large volumes of heating or cooling medium.

Similar to Type C coils, Type LRB coils feature 1" OD tubes. Type LRB coils are for heating and cooling using water, steam or other heat transfer liquid. Although generally used for boiler air preheating, this coil readily handles large quantities of heating or cooling fluid. High temperature and pressure designs are available with special sizes and configurations and materials to meet specific requirements.

Aerofin® Type PDRC and PDRP

1" OD tube coil for heating and cooling with large volumes of liquid or steam, cleanable tubes.

Type PDRC and PDRP coils feature 1" OD tubes and removable cover plate (PDRC) or plugs (PDRP). This design allows access to the inside of the tubes for inspection and cleaning. Compatible with hot water, glycols, oils, gas, and steam, this coil is available in special high pressure/temperature designs (up to 1500 psig).

Download dimensional drawings at www.aerofin.com

Aerofin® Process Gas Coolers/Heaters

Transition unit for cooling or heating process gas.

These units are specifically designed for the temperatures, pressures and environments to which they will be exposed. The gastight removable core allows heat exchange elements to be readily cleaned, inspected or replaced without the need to replace the entire unit. Process Gas Coolers/Heaters are provided with transitions on both ends to mate to process piping. Aerofin designs each transition to properly distribute the air across the finned tube bundle and minimize pressure drop.

Aerofin® Transformer Oil Coolers

Fan/coil unit specifically designed to cool transformer oil.

Transformer Oil Coolers are specifically designed for the transformer make and model, and the operating conditions. Each cooler unit consists of a coil and cabinet containing one or more direct drive propeller type fans. Standard construction is copper tubes, aluminum or copper fins, roller expanded tube joints, welded carbon steel box headers and threaded connections. Turbulators are used inside the tubes to enhance heat transfer when required.

Aerofin® Fan/Coil Units

Fan and Coil units for cooling liquid with ambient air.

Fan/Coil Units consist of one or more heavy-duty coils fitted with cabinet housing fans for cooling water, glycols, oils, and other fluids. Typical applications are dry cooling tower cooling, engine jacket water cooling and process water cooling. Fans, motors and coils are selected specifically for the environment in which they are to operate.

Aerofin® Nuclear, Safety Related Coils

Nuclear, Safety Related and Non-Safety Related coils available with various ASME Stamps.

Aerofin maintains essential quality assurance controls for all Safety Related (and Non-Safety Related) equipment requirements including 10CFR50-Appendix B, ASME Section III (Class 2 or 3), and ASME Section VIII, Division 1. Aerofin holds the ASME "N" and "NPT" certificates for ASME Section III, Class 2 and Class 3 pressure vessels, as well as a Certificate of Authorization to U-stamp ASME Section VIII, Division 1 pressure vessels. Coils are available in virtually any commercial alloy with heavy duty seismic construction and total access to internals for maintenance and inspection.

Quality HVAC and Custom Engineered Heat Transfer Equipment for over 75 years

Visit our website today, www.aerofin.com

Other Coils

Aerofin Corporation, a market leader in the heat transfer coil industry, offers a wide variety of standard and special coils. Over the years, Aerofin has responded to industry needs with new products that suit specific applications, providing benefits unsurpassed in other configurations.

Examples of specially designed coil types are briefly described below. Aerofin's highly trained engineers can help you select the most efficient and cost effective coil type for your application.

Aeromix® Integral Face & Bypass Heating Coils

Aerofin's Aeromix® coils feature Integral Face and Bypass design. Because the leaving air temperature from the Aeromix® is controlled by directing the airflow across or around the finned tubes, modulation of the steam or fluid is not necessary. This feature maintains adequate steam pressure or fluid velocity for prevention of freeze-up. The Aeromix® provides even air temperature and constant air volume with minimal temperature override.

Typical applications include HVAC air preheat, institutional air make-up and roof-mounted penthouse make-up air. This coil type falls within the scope of ARI Standard 410 Certified Ratings.

Vertical tube model

Horizontal tube model

There are two distinct Aeromix® coil types available, most easily differentiated by the tube orientation. The vertical tube Aeromix® coil is a copper spiral fin design used in larger face area applications, up to 88 square feet. The smaller horizontal tube coil is an aluminum plate fin design used in applications up to 24 square feet in face area.

Contact Aerofin for a complete Aeromix® catalog.

Aerofin® Universal Casing Heating and Cooling Coils

Universal casing coils provide maximum fin surface area in a given space. Our special casing profile shape accommodates more tubes and more fins, yielding more heat transfer capacity.

Aerofin welcomes new and different coil design challenges. Many long-term relationships have resulted from Aerofin's desire to support customers with almost any type of heat transfer coil for most any application. Aerofin is willing and equipped to help you. Call today for your heat exchanger needs.

SPIROVENT® DIRT

AIR ELIMINATORS
DIRT SEPARATORS
STANDARD VELOCITY

SPIROTHERM

THE ULTIMATE IN DISTRIBUTION EFFICIENCY

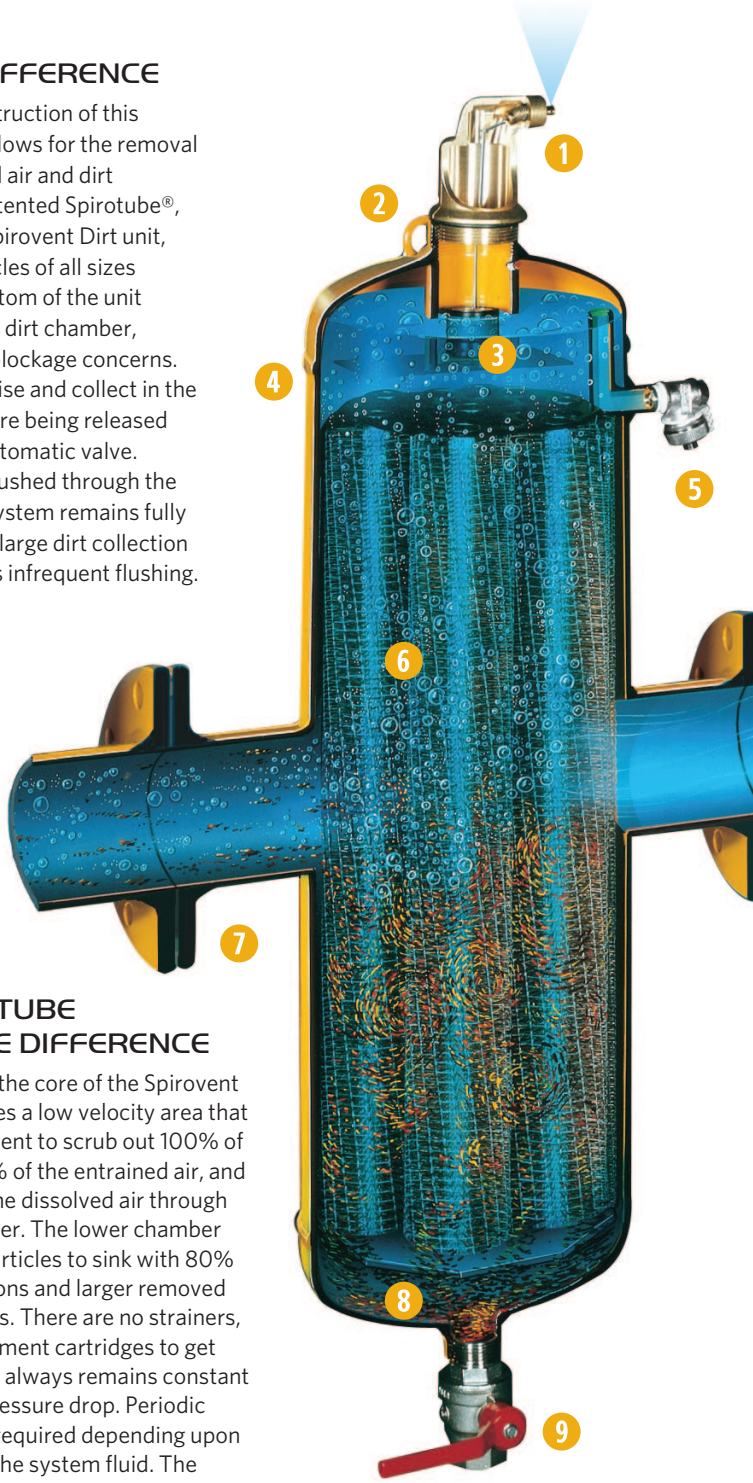
AIR- AND DIRT-FREE SYSTEM WATER THROUGH A SINGLE UNIT

The life and efficiency of a heating or cooling system are greatly dependent on the quality of the system water. Air and dirt problems cause frequent breakdowns and increased customer complaints. Corrosion, cavitation, and component wear are consequences of air-saturated, dirty water.

Recurring problems and increased maintenance results in unnecessary costs and dissatisfied owners.

There is a solution!

A system without air and dirt is possible! There is a unique dual-purpose device that will remove air and dirt down to the smallest particle, keeping the system free from air and dirt, permanently. It requires little maintenance, and works without strainers or filters. Less maintenance, fewer costs, satisfied owners!

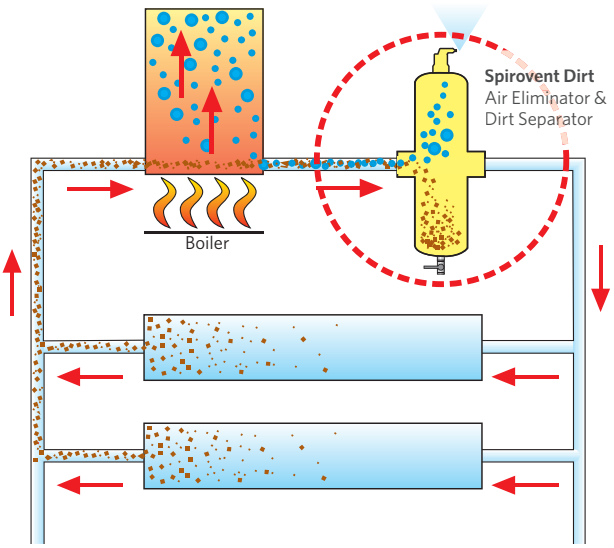


The name:

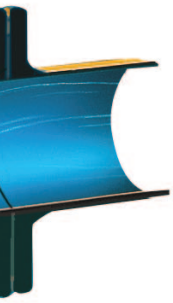
SPIROVENT DIRT

THE KEY DIFFERENCE

The unique construction of this combined unit allows for the removal of both entrained air and dirt particles. The patented Spirotube®, the core of the Spirovent Dirt unit, causes dirt particles of all sizes to sink to the bottom of the unit and collect in the dirt chamber, eliminating any blockage concerns. The air bubbles rise and collect in the air chamber before being released via an integral automatic valve. The dirt can be flushed through the drain while the system remains fully operational. The large dirt collection chamber ensures infrequent flushing.

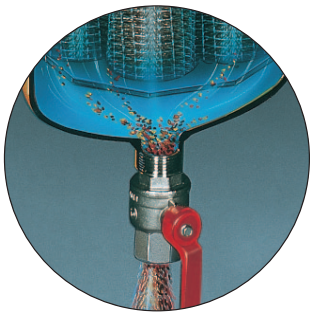


THE SPIROTUBE MAKES THE DIFFERENCE



The Spirotube is the core of the Spirovent Dirt unit. It creates a low velocity area that allows the Spirovent to scrub out 100% of the free air, 100% of the entrained air, and up to 99.6% of the dissolved air through the upper chamber. The lower chamber allows the dirt particles to sink with 80% of those 30 microns and larger removed within 100 passes. There are no strainers, filters, or replacement cartridges to get clogged and flow always remains constant without a high pressure drop. Periodic blow downs are required depending upon the condition of the system fluid. The result: increased component life and heat transfer efficiency; decreased oxygen-based corrosion and pump cavitation; the elimination of air related noises such as gurgling and cascading; and the need for continual "routine" maintenance to vent, bleed, and purge.

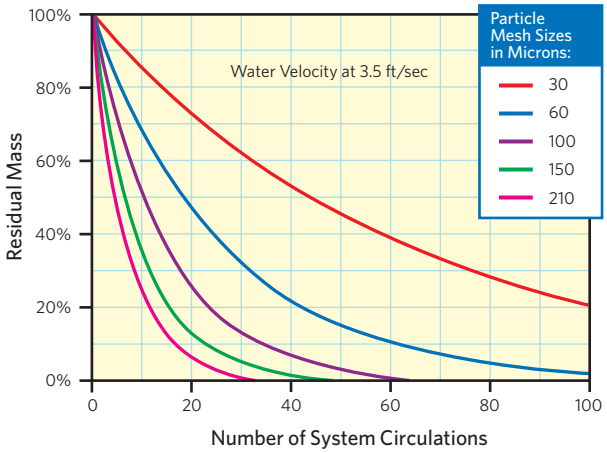
THE ULTIMATE IN DISTRIBUTION EFFICIENCY



ADVANTAGES TO THE SPECIFIER, INSTALLER AND OWNER

- No bypass, isolating valves or replacement filters to clog and reduce flow
- Dirt can be flushed while the system is in full operation.
- Quiet operation
- Minimum pressure drop; always constant
- Increased component life
- Reduced oxygen-based corrosion and pump cavitation
- Provides optimum heat transfer
- Optional removable head for bundle inspection

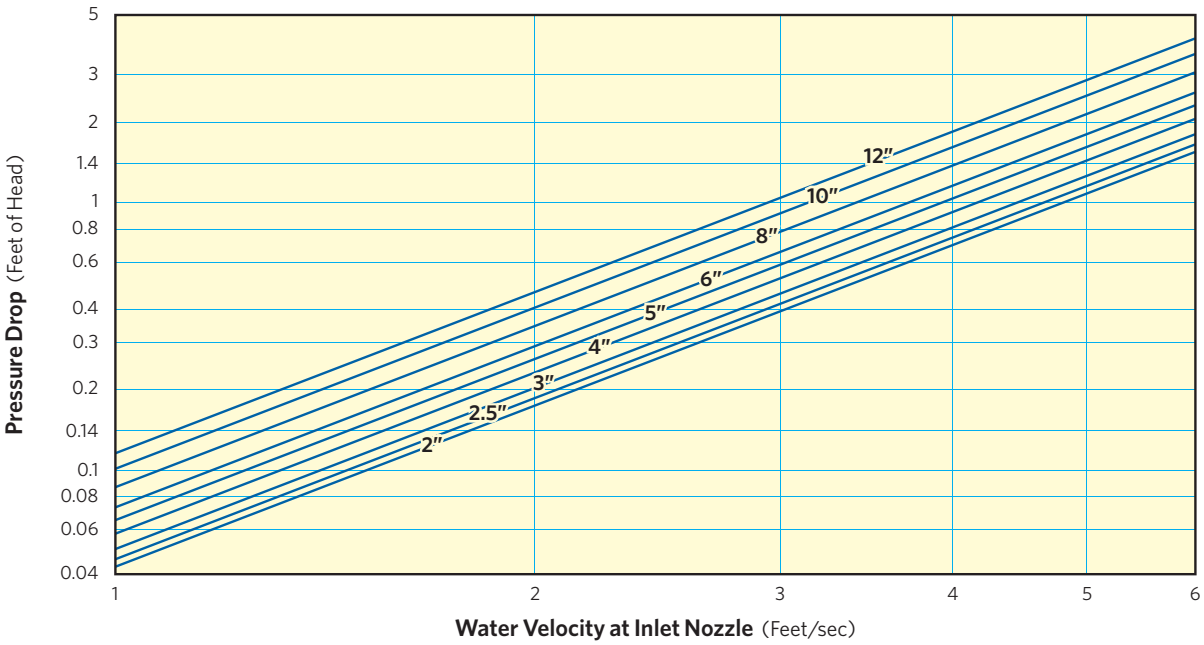
1. The automatic air vent is guaranteed not to leak and can only be closed by the installer for a pressure test.
2. Lifting eyes make installation easy.
3. The air chamber has been designed so that dirt cannot reach the valve.
4. Welded steel construction guarantees long life.
5. Valve for releasing large amounts of air during filling and for skimming off floating dirt.
6. The unique Spirotube is the core of the Spirovent. Designed to trap the smallest microbubble and microscopic dirt particle, yet it offers little resistance to flow.
7. Threaded or flanged connections available.Threaded 2"- 4" (not available on units with removable head) ; Flanged 2"and up.
8. Large capacity collection chamber reduces the need for frequent draining.
9. Drain valve for flushing out the dirt.



When the drain valve is opened the system pressure flushes out the collected dirt. This only takes a few seconds.

INSTALL THE SPIROVENT DIRT FOR OPTIMUM PERFORMANCE

Ideal placement of a Spirovent unit is based on microbubble separation and Henry's Law. Simply put, Henry's Law states that air is released from water as the temperature increases or the pressure decreases*. For this reason, the Spirovent is typically installed in the hottest point in the system. For a heating installation, this is in the supply from the boiler. In a chilled water circuit, the warmest point is in the return to the chiller.



*For more detailed technical information, ask about our Spirotism booklet .

ESM 26:
Condensing Unit Replacement

ESM Overview

Ameresco proposes to replace the existing outdoor condensing unit serving the Manross Library with a new condensing unit. The unit is nearing the end of its useful life, and numerous service and repairs have been made to maintain the unit. The new unit will help improve reliability and alleviate expensive repairs as well as improving efficiency.

Figure 26.1: Ameresco proposes to replace the condensing unit serving the Manross Library with a new equivalent high efficiency unit.

ESM Detail

Existing System

The Manross Library has a 20-ton condensing unit (Trane MN: RAUA-2006-MB) located outside which provides cooling to two Trane AHUs. Personnel report that the unit has received numerous repairs, leaks coolant, and is near the end of its useful life.

Proposed System

Ameresco proposes to install a new Trane RAUJC20EB (or approved equivalent) condensing unit on the existing outdoor location, sized for the appropriate load. New refrigerant and piping will be used to supply the new AHU's proposed in ESM 27.

The scope of work includes all mechanical, electrical and demolition work required to install a new air-cooled condensing unit located outside the Manross Library.

Demolition:

- Remove existing Trane condensing unit (CU) located outside behind the Manross Library.
- Disconnect electric power at the unit circuit breaker; verify power is off at the CU's disconnect;
- Remove existing disconnect, leaving the electric feeders in place; remove nameplate from the disconnect and set aside for reinstallation on new disconnect
- Remove and reclaim refrigerant as per EPA guideline
- Disconnect and remove all existing refrigerant lines, including underground lines.

New Work:

- Provide and install one (1) new 20 ton air-cooled condensing unit (Trane RAUJC20EB) or equal.

"Page content is subject to Confidentiality Restrictions"

- CUs' refrigerant shall be an HFC, R410A, or equal
- Furnish and install new suction and liquid lines
- Furnish and install 1 inch thickness new closed cell, elastomeric insulation on the suction line, Armaflex Armacell, or equal. Expose insulation shall be covered with 2 coats of paint manufactured specifically for covering elastomeric insulation, WB Armaflex or equal
- Furnish and install new electric disconnect for CU. Disconnect shall be approved for outdoor use
- Wire CU utilizing flexible waterproof outdoor conduit
- Furnish and install new copper suction and liquid lines, sized equal to existing
- Furnish and install new sight glass and filter drier charge CU and verify proper operation

Exclusions:

The measure assumes the following:

- Work shall occur during normal business hours.
- Any abatement or remediation of asbestos or other hazardous materials beyond that specifically called out to be included in the scope of work above is excluded from the scope and cost of the proposed work.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

Energy savings will be realized by the improved efficiency of the new condensing unit and reduced maintenance cost requirements.

TRANE

Air-cooled condensing units

20 to 120 ton models ideal for conventional, split system applications

Ingersoll Rand

Outstanding design for conventional facilities: schools, multi-story office buildings, hotels, municipal and industrial facilities

and the not so conventional

Sportsdome

The Wyoming Valley Sportsdome located in Wilkes Barre, Pennsylvania is just one example of the Trane Split System flexibility. This unique design is kept comfortable with a 100 ton Trane Split System Condensing Unit coupled with a Trane DX coil module and retrofitted into one of two existing gas fired heating units.

The Sportsdome hosts:

- Indoor soccer
- Indoor golf driving range
- Extreme games: BMX bikes and skateboards
- Indoor field hockey
- Indoor football
- Indoor baseball

What makes Trane a leader in the 20 to 120 ton condensing unit market?

A natural leader

The impeccable reputation of Trane in the Air Conditioning Marketplace makes them a natural leader in the split system sector. This advanced design is engineered to be the most efficient, reliable and flexible in the industry today. When paired with air-handling units or remote chillers, these units are remarkably efficient systems.

Superior features

Trane uses 14 gauge galvanized steel to build a unit frame that will endure years of weathering. Louvered panels provide excellent coil protection while enhancing the appearance of the unit and increasing its strength. The unit is phosphatized and finished with Trane Slate Gray air-dry paint.

With more than 12 years of development and over 25 patents, the Trane 3-D® Scroll compressors have 70% fewer parts than an equal capacity reciprocating compressor.

The single orbiting scroll eliminates the need for pistons, connecting rods, wrist pins and valves; fewer parts result in a longer, more reliable operating life. Less rotating mass further reduces friction for far greater efficiency. (For additional details on the 3-D Scroll compressors, please see Trane Sales Brochure COM-S-9.)

Great options

A wide range of options are available to meet a variety of 20 to 120 ton applications.

- Low ambient option
- Hot gas bypass
- Suction service valve
- Pressure gauges
- Copper finned condenser coil
- Isolators
- Flow switch
- UL/CSA approval
- Coil coating for corrosion resistance (available on 20 to 60 tons only)

Nom. tons	EER/IPLV	Net Cap. MBh @ ARI	Unloading Steps %	Dimensions (in.) H×W×L	Operating weights (lb.) copper/aluminum

120	10.9/16.2	1560	25/50/63/75/88/100	79×85×227	7000/8199

Notes: 20-ton condensing unit only is certified and tested in accordance with ARI Standard 365. All tonnages above 20-ton are tested in accordance with ARI Standard 365. Full load ratings are at 95°F entering air temperature, and refrigerant conditions entering the condensing unit of 45°F saturated and 60°F actual temperature. Part load ratings are at 80°F entering air temperature and refrigerant conditions entering the condensing unit of 50°F saturated suction and 65°F actual temperature.

System control options that give you control

Control options

Four system control options on 20 to 60 ton, and three system control options on the 80 to 120 ton models are available, offering solid-state electronics. Factory-installed controls help offset field installation costs.

No system control provides easy termination of locally provided and designed temperature controls. Compressor minimum on and off timers are provided with this option.

Supply air Variable Air Volume (VAV) control includes a multi-step, demand oriented, microprocessor based discharge air controller, designed for VAV systems. With this option, Trane includes Frostat™, the industry's most reliable method of coil frost protection. With Frostat, your system can provide energy efficient comfort at part load.

Remote Evaporative Liquid Chiller (EVP) control includes a unit mounted, multi-step, demand oriented, microprocessor-based leaving chilled water controller that allows chilled water to be generated remotely from the condensing section.

Constant volume control (20 to 60 ton) includes an electronic controller with two cool steps and four heat steps for 20-30 ton models, four cool steps and four heat steps on the 40-60 ton models.

TRANE

Trane optimizes the performance of homes and buildings around the world. A business of Ingersoll Rand, the leader in creating and sustaining safe, comfortable and energy efficient environments, Trane offers a broad portfolio of advanced controls and HVAC systems, comprehensive building services, and parts. ESM 27:
AHU Replacement

ESM Overview

Ameresco proposes to replace the two (2) existing air handling units (AHU's) serving Manross Library. These upgrades will provide new reliable equipment that will save energy and lower operating and maintenance costs. The existing units will be removed and replaced with new units sized to match the existing. The new units will be tied into the new EMS, which will eliminate the existing pneumatic controls. The controls along with new dampers and valve controls will be able to more accurately control discharge temperatures, which will increase occupant comfort and provide energy savings.

ESM Detail

Existing System

The Manross Library is served by two (2) air handling units original to the building. AHU-1 is a Trane MN: BRCA-2006-0A and serves the main floor of the Library. The cooling coil for this unit was recently replaced. AHU-2 is a Trane MN: SAUA-1506A and serves the Basement level of the Library. The AHU's are old and nearing the end of their useful lives.

Proposed System

Ameresco proposes to replace the two (2) AHU's with new Trane (or approved equal) units. As part of the replacement of the units, Ameresco will install new DDC control valves and damper actuators on each unit and tie into the proposed energy management system.

The scope of work includes all mechanical, electrical and demolition work required to replace the two (2) existing air handling units serving the Manross Library with new similar sized units.

- Demo and remove the two (2) existing air handling units
  - Demo and remove existing circuit breakers
  - Disconnect existing conduits and reconfigure for new air handlers
  - Demo and remove hot water piping back to valves
  - Demo and remove two (2) existing hot water valves
  - Disconnect and cap existing DX cooling lines

"Page content is subject to Confidentiality Restrictions"

  - Demo and remove existing ductwork transitions between ductwork and removed units
- Provide and install two (2) new Trane Climate Changer air handling units or similar:
  - AHU-1 to be Trane MN: UCCAD12A0A0RVC5200000 or equal
    - 4 row DX coil
    - 1 row reheat hydronic coil
    - FC fan with VFD and SGR
    - 1st year labor warranty for whole unit
  - AHU-2 to be Trane SCIJ15032 or equal
    - Self-contained
    - Integral air-cooled condenser (15 tons)
    - Hot water heating coil
    - 2-speed motor kit
    - 1st year labor warranty for whole unit
  - Install new breaker sized for new units and reconnect existing conduit and wiring to new units
  - Disconnect existing pneumatic tubing for actuators and cap prior to removal of units
  - New units will replicate existing AHUs and require same control points
  - Provide and install new electronic damper actuators and control valves
    - AHU-1 –2" HW valve (2-way), four (4) Damper Actuators
    - AHU-2 – 2" HW valve (2-way), two (2) Damper Actuators
  - Pipe to new hot water coils in new units, per manufacturer's instructions
    - Install new isolation valves at connection points
    - Install all new valves, strainers, temperature and pressure gauges, etc
  - Provide new duct transitions to connect new units to existing ductwork
- Insulate with vapor barrier and label, where appropriate
- Insulate and label, where appropriate, all new hot water piping
- Provide startup of units with manufacturer's rep

Exclusions:

The measure assumes the following:

- Existing isolation valves in water piping are assumed to be in working order.
- Existing fire-suppression system in ductwork is up to code.
- Repair of existing valves and piping that shall be tied into as part of this scope of work is excluded.
- Repair, cleaning, or balancing of existing ductwork tied into as part of this scope of work is excluded.
- Work shall occur during normal business hours.
- Provision of temporary heat or other utilities is excluded.
- Any abatement or remediation of asbestos or other hazardous materials beyond that specifically called out to be included in the scope of work above is excluded from the scope and cost of the proposed work.

TRANE

Performance Climate Changer™

Next generation air handler from Trane

Ingersoll Rand

Trane Performance Climate Changer™ Air Handler

Trane has a history of combining customer needs, engineering expertise, advanced technology and cutting-edge innovation to provide superior products that deliver exceptional performance. The next generation of Trane air handlers continues this tradition.

Superior performance

The Performance air handler has the tightest casing in the commercial ARI market, meeting an ASHRAE 111 Class 6 leakage level. This leakage rate is better than most custom designs. Superior performance features include:

- Low-leak casing design that achieves less than 1.0 percent leakage rate and can withstand +/- 8 inches w.g. static pressure, with no more than 0.0042 inch deflection.
- Two-inch, R-13 foam-injected panels with mid-span, internal thermal breaks and standard thermal break access doors. The no-through-metal design delivers thermal performance that helps ensure condensation will not form on the casing exterior, even with 55°F supply air temperature and unit external conditions of 81°F dry bulb and 73°F wet bulb.
- Filter technology that exceeds LEED requirements and reduces pressure drops up to 50 percent versus previous designs.

Energy efficient

Trane has designed even the most basic features to encourage energy conservation, allowing the system to surpass minimum ASHRAE Standard 90.1 requirements.

The Performance air handler delivers:

- Superior performance
- Industry-leading energy efficiency
- System optimization
- Highest quality
- Lowest installed cost

Energy efficient components include:

- Positional service lights with light emitting diode (LED) fixtures, which last up to ten times longer than fluorescent bulbs and one hundred times longer than incandescent bulbs, while using only 2–10 watts of electricity.
- Traq™ dampers, an AMCA 611-certified airflow monitoring solution with standard and low-flow options, which allow direct measurement and control of outdoor and return airflow. The low-flow Traq damper is a key part of a demand control ventilation strategy to help drive down energy costs.
- High-efficiency coil fins deliver superior heat-transfer efficiency while allowing face velocities in excess of 625 fpm without moisture carryover.
- Discharge plenums and plenum fan sections, which are available with variable size, type and location of openings, to reduce static pressure loss and lower energy consumption.

System optimization

The Trane EarthWise™ design philosophy incorporates high-efficiency air handlers and water chillers with low-flow rates and low temperatures on both the waterside and airside. Benefits include:

- Reduced emissions
- Lower first cost
- Lower operating cost
- Improved acoustical performance
- Smaller equipment and components
- Better comfort with lower space humidity

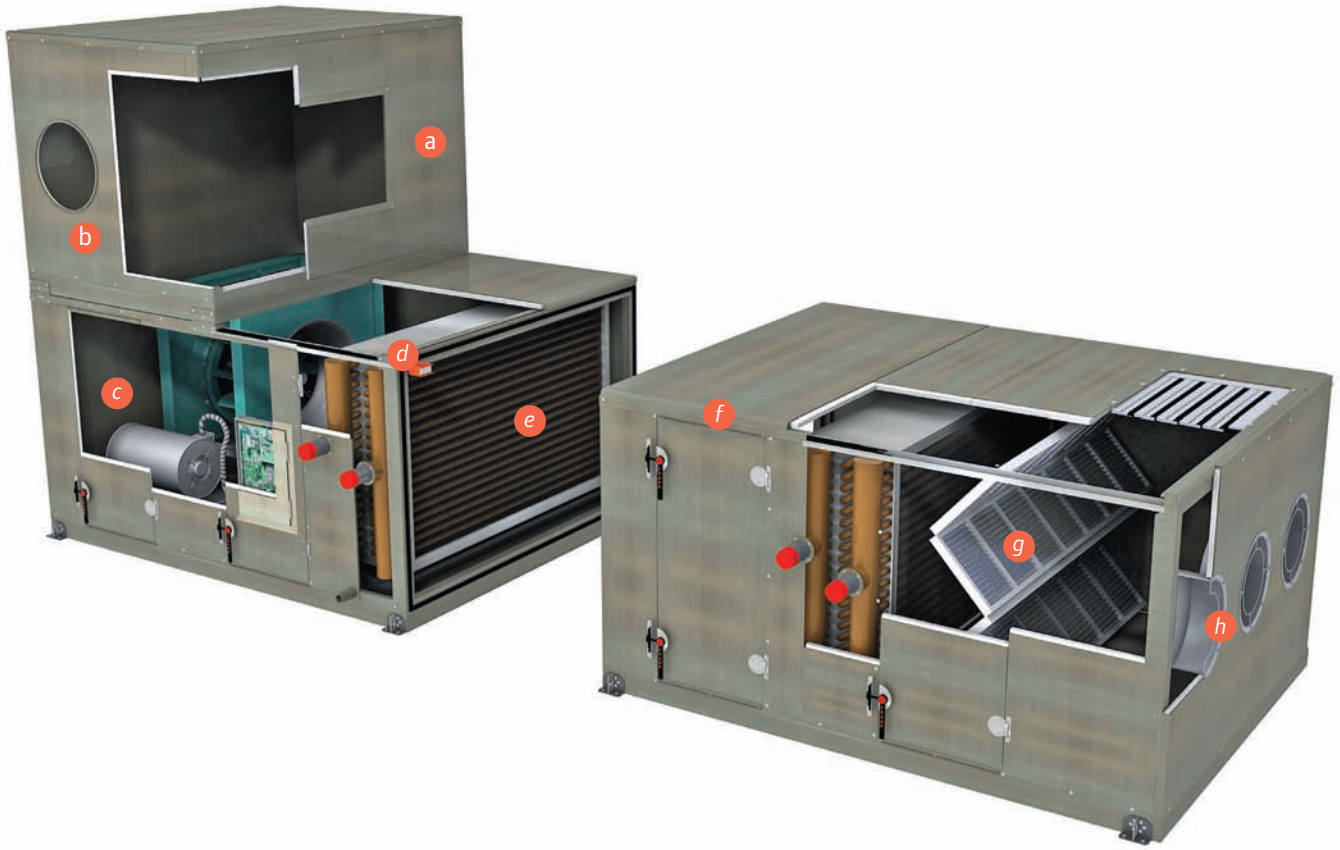
Low-temperature, low-flow systems can be challenging, but the Performance air handler is engineered to capitalize on the benefits of an EarthWise system:

- Low-leak casing design incorporates foam-injected and mid-span internal thermal break panels and standard thermal break access doors to minimize condensation from low-leaving air temperatures.

The Trane EarthWise™ design philosophy incorporates high efficiency air handlers and water chillers with low flow rates and low temperatures on both the waterside and airside.

System Optimization, continued

In addition to the obvious energy savings, moving less air reduces the size of air handlers and ductwork. This can result in a quieter unit and a smaller mechanical room, leaving more space for tenants. In addition, the colder air lowers building dew point, improving building humidity control and indoor air quality.



- Factory-engineered, -mounted, and -tested controls ensure that sensors and sequences deliver optimal operating efficiencies and that casing openings have been properly sealed.
- Numerous coil types and high-efficiency coil fin technology enables the latest in airside heat transfer, which improves overall system efficiency by lowering the coil approach temperature and reducing the chance of moisture carryover.
- The ability to choose the exact number of fins per foot of coil surface allows heat transfer and air pressure performance to be tuned to specific application requirements.
- A wide array of fan options provides optimal sound and efficiency choices for the application.
- The latest controls technology easily incorporates fan pressurization and/or demand control ventilation strategies to further enhance the system.

EarthWise design provides many benefits—both for the environment, and for business. Few building design and construction strategies can offer a solution as complete as the EarthWise system.

High quality

Trane has a long-term commitment to quality and manufacturing excellence ensuring our customers receive a reliable unit with proven and tested dependability. The innovative new Performance air handler—ARI Standard 430–certified—will provide optimal, energy-efficient comfort for decades to come.

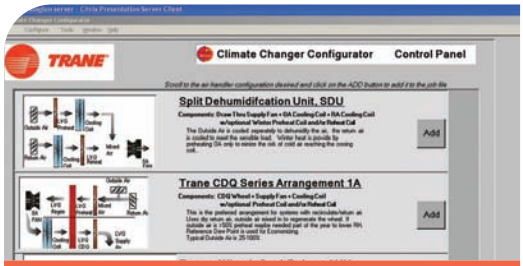
Exceptional quality is built into every component of the new Performance air handler. Formulated panels and an integral base frame minimize the number of seams that could introduce air leak paths. All Trane coils are ARI Standard 410-certified and tested at one-and-a-half times the maximum operating pressure. In addition, all Trane fans are dynamically balanced in the horizontal and vertical planes. Fans with variable frequency drives also undergo inverter balancing at peak airflow and at all operating points on the system curve. Experienced technicians factory-mount and –wire controls using standard control point locations so that each unit is wired the same way, every time, making check out and servicing quicker and easier.

Performance Climate Changer features:

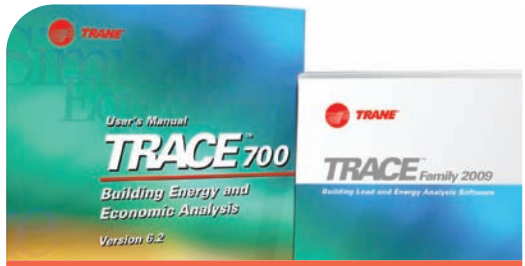
- *a* ***Low casing air leakage:*** ASHRAE Standard 111 Class 6 leakage level achieves less than one percent leakage rate
- *b* ***Discharge plenum sections:*** Minimize air pressure drop by transforming sections to the most efficient opening sizes, types and locations
- *c* ***Fan sections:*** Twice the fan flexibility and an average 3–5 percentage points more efficient than previous Climate Changer™ air handler designs
- *d* ***Single-point power and quick connect wiring:*** Factory wiring minimizes installation costs and provides wiring integrity between sections
- *e* ***Coil sections:*** More coil options with industry-leading low pressure drop fin designs and infinitely variable fin spacing to exactly match capacity requirements
- *f* ***Thermal-break casing panels and doors:*** Two-inch R-13 foam-injected casing panels and doors with thermal breaks minimize heat transfer and withstand +/– 8-inches w.g. pressure with no more than 0.0042 inches deflection
- *g* ***Filter sections:*** Filter technology that exceeds LEED requirements and reduces pressure drops up to 50 percent versus previous designs
- *h* ***Mixing sections:*** New AMCA 611-certified Traq technology capable of accurately measuring lower flow for demand control ventilation applications

Lowest installed cost

The Performance air handler includes many features designed to reduce installation time and cost:



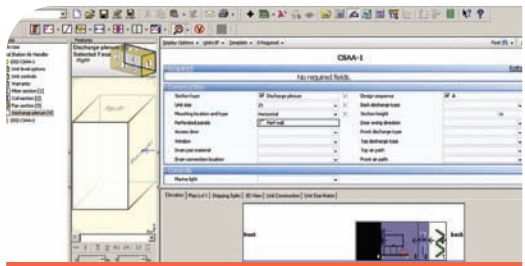
- Lifting lugs are included on the integral base frame; and all units ship with a skid designed for forklift transport.
- Discharge plenums are available with variable height, size, type and location of openings, which minimizes the need for duct transitions by the installing contractor.
- Factory-installed interoperable controls shorten construction cycles, simplify job site coordination, reduce installation time and expense, and provide single-source responsibility for warranty and service issues.
- Single-point power is available with a high-voltage distribution block and external main unit disconnect with lockout/tagout capabilities.
- LED service lights are factory wired to an external factory-provided Service Module, which includes a switch and GFCI receptacle.
- Quick-connect wiring minimizes installation costs and provides wiring integrity between sections without having to identify or check continuity.
- Factory-installed conduit connectors eliminate penetrations in the wrong location, and all electrical casing penetrations and coil connections are properly sealed at the factory.
- NEMA 4 external motor junction box and motor conduit is available. Motor leads are run through flexible metal conduit to the external junction box, and penetrations are properly sealed.



Trane consistently delivers the best HVAC solution for your buildings.

Trane analysis and design tools

Trane has comprehensive analysis and design software tools to provide whole building analysis, acoustical design guidance, equipment performance data, suggested control strategies, and more. Talk with your local Trane sales engineer to learn how these tools will help achieve an energy-efficient system design that provides optimal IAQ, and stays within the project budget.



Trane Climate Changer Configurator (CCC) software evaluates air handler design alternatives such as split dehumidification units, energy wheels, and CDQ™ desiccant dehumidification systems for energy efficiency and humidity control

Trane Air Conditioning Economics (TRACE™) optimizes and compares the design of virtually any building's HVAC system based on energy utilization and lifecycle cost, factoring in construction, orientation and size.

Trane Controls Pre-Packaged Solutions (PPS) quickly lays out and optimizes control strategies for superior equipment and system performance.

Trane Official Product Selection System (TOPSS™) selects and calculates performance of Trane equipment.

Trane Acoustics Program (TAP™) accurately predicts and compares system sound levels.

Trane Expertise

The innovative Performance air handler was developed by the trusted leader in the industry: Trane. For superior performance, industry leading energy efficiency, system optimization, the highest quality and the lowest installed cost, the right choice is the Trane Performance Climate Changer air handler.

Trane is a pioneer in the HVAC industry and has consistently led the industry in providing solutions for its ever changing needs. With a portfolio of proven equipment and controls, systems-focused solutions, leading industry experts, and highly trained sales engineers, Trane has the experience and expertise to design, manufacture, install and service an HVAC system that will meet your environmental, business and building performance goals.

Ingersoll Rand

Ingersoll Rand (NYSE:IR) is a world leader in creating and sustaining safe, comfortable and efficient environments in commercial, residential and industrial markets. Our people and our family of brands—including Club Car®, Hussmann®, Ingersoll Rand®, Schlage®, Thermo King® and Trane®—work together to enhance the quality and comfort of air in homes and buildings, transport and protect food and perishables, secure homes and commercial properties, and increase industrial productivity and efficiency. We are a $13 billion global business committed to sustainable business practices within our company and for our customers.

ESM 28A:
Induction Unit Refurbishment

ESM Overview

As an alternate to ESM 28, Ameresco proposes to refurbish the majority of existing perimeter induction air terminal units at City Hall and replace twenty (20) of the worst shape units with new units equivalent in size and style. As part of the Refurbishment, Ameresco will replace each enclosure with new enclosures and install new DDC dual temperature control valves on each unit that will be tied into the proposed energy management system.

Figure 28A.1: Ameresco proposes to refurbish the induction units found throughout the City Hall.

Refurbishing the existing induction units as opposed to replacing all of them will improve each unit's functionality while costing less than a full replacement of all 195 units.

ESM Detail

Existing System

City Hall is served by one-hundred and ninety-five (195) perimeter induction air-terminal units equipped with supply air continually fed from air handling unit #2. Each unit has a pneumatic dual temperature valve and dual temperature coil which can be used for heating (hot water) or cooling (chilled water), depending on the mode of operation of the central plant. The induction units are part of the original construction, which dates back to the early 1960's. Due to the age of these units, there are several performance and maintenance issues, which lead to increased maintenance requirements.

Proposed System

As an alternate to a full replacement (ESM 28), Ameresco proposes to refurbish one-hundred and seventy-five (175) existing induction units at City Hall while replacing the twenty (20) worst shape units with new units equivalent in size and style. As part of this refurbishment, all 195 units will receive new enclosures, and new DDC dual temperature control valves that will be tied into the proposed energy management system.

The scope of work includes all mechanical, electrical and demolition work required to refurbish one-hundred and seventy-five (175) induction units and install twenty (20) new induction units throughout City Hall. SOW includes:

- Refurbish one-hundred and seventy-five (175) induction units including:

"Page content is subject to Confidentiality Restrictions"

  - Cleaning dual temp coils
  - Cleaning nozzles
  - Repairing any induction unit duct connections in poor condition.
  - Removing existing enclosure and install new painted enclosure including removable vent parts.
- Demo and remove twenty (20) existing induction units;
  - Single heating/cooling water coil
  - Two Position 2-way dual temp control valve.
  - Isolation Valves
- New units to be Carrier Weathermaster® 36SV Induction units or similar. Sizes and capacities shall match existing units.
- Drainable galvanized steel condensate pan shall be provided with unit.
- Base unit assembly shall consist of an air inlet, air plenum, induction nozzles, water coil assembly, (lint screen or filter), air transition fitting, air plug and drainable condensate pan.
- Base unit enclosure and panel sections shall be constructed of not lighter than 18 gage, cold-rolled steel, bonderized, recoatable baked prime finish. Enclosure shall consist of removable front access panel with snap-in fasteners to permit easy removal for routine inspection and servicing of unit and controls, removable plastic discharge grille sections designed for 4-way adjustment of airflow, mounting brackets and suitable accessories for base unit assembly.
- Install new units according to manufacturer's specifications including:
  - Install wall mounting strip and hang base unit
  - Make all air connections
  - Connect dual temp water supply and return piping to coil
  - Install new steel condensate pans and connect to existing ¾" drain connection.
  - Install new Carrier enclosure
  - Balance system
- Provide and install ½" 2-Way Modulating Dual Temp Water Control valves for one hundred and ninety-five (195) induction units.
  - Replace existing pneumatic control devises with electronic
  - Wire new valve to existing transducer near adjacent wall.
  - Re-use existing wall sensor
- Provide programming of all points, graphics and control sequences for each piece of equipment controlled.

Exclusions:

The measure assumes the following:

- Existing isolation valves in water piping are assumed to be in working order.
- Repair of existing piping and ductwork that shall be tied into as part of this scope of work is excluded.
- Work shall occur during normal business hours.

- Work excludes any floor tile work, cutting, patching and painting
- Any abatement or remediation of asbestos or other hazardous materials beyond that specifically called out to be included in the scope of work above is excluded from the scope and cost of the proposed work.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

Energy savings will be realized by the improved efficiency of the new and refurbished induction units and reduced maintenance cost requirements.

ESM 33:
WPCP - Aeration Control Improvements

ESM Overview

Ameresco proposes to improve the existing aeration control system at the Water Pollution Control Park (WPCP) by updating the existing aeration control software and switching the system from manual control to automatic control. The new system will provide better control of the dissolved oxygen (DO) levels in the tanks, reducing the required motor amperage from the air blowers, saving energy.

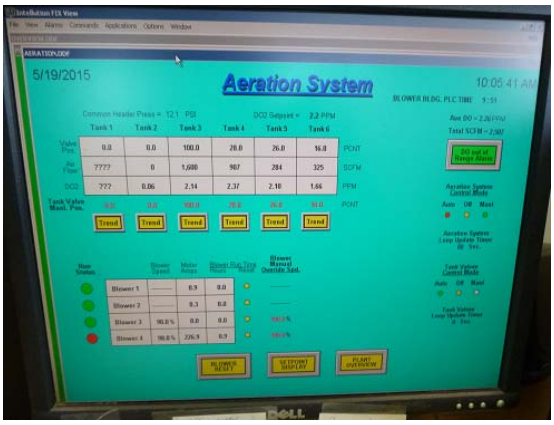

Figure 33.1: Ameresco proposes to upgrade the existing aeration controls and allow for automated DO control.

ESM Detail

Existing System

The existing aeration control system was installed in 2005 and utilizes Intellution Fix32 software. The system was originally set up with a sequence of operation for automated control of the DO system, however, it was reported that this automatic control has not been used. The system has primarily been in manual remote control mode. In this mode staff types in a percentage open for any of the valves in order to achieve desired DO levels in tanks 3 & 4. The system will drive the specific valve open or close to the designated position. This type of control requires constant monitoring by staff, and often allows DO levels to reach higher than required levels which translates into wasted energy.

The Existing system consists of:

- (6) Aeration tanks. Tanks 1 and 2 have a mixer, tanks 3-6 have air flow control via valve adjustment.
- (2) 250HP blowers with VFD's. VFD's have analog speed feedback outputs, run and fault contact outputs.
- (2) 350HP without VFDs
- (1) of the 350HP blower units is proposed to be replaced with a new 215 HP turbo blower (ESM 34)
- (2) Submersible Pumps with current sensing 4-20 mA analog outputs
- Submersible Wet Well Level Sensor – 4-20mA
- (6) DO sensors – 4-20mA
- (6) Air Flow Sensors – 4-20mA
- Common blower outlet header pressure sensor – 4-20mA
- (4) Air control valves (tanks 3 – 6 only, no air valves on tanks 1 or 2)

"Page content is subject to Confidentiality Restrictions"

Proposed System

Ameresco proposes to upgrade the Bristol WPCP aeration control system. The existing Automation Direct PLC, I/O modules and OPTO-22 I/O modules will be replaced with Allen-Bradley CompactLogix PLC or approved equal and I/O module hardware. The new PLC and I/O will be installed into the existing control panel. SCADA program modifications will be implemented (existing GE iFix). The new control system will be set for automatic DO control, adjusting each tanks valves based on DO levels of 2.2 ± 0.2ppm.

Hardware Scope

Ameresco will supply the following hardware for installation into the existing control panel

- (1) A-B CompactLogix PLC
- (1) PLC Power Supply
- (4) 8 channel Analog Input module
- (2) 8 channel Analog Output module
- (2) 16 point DC Digital Input module
- (1) 16 point Relay Output module
- (1) End cap terminator
- Misc. terminals, fuses, wire, connectors and mounting hardware required for retrofit installation

Installation Scope

- Removal of existing PLC and I/O
- Installation of new PLC and I/O
- Control Panel Wiring
- Termination of field device wiring
- PLC programming (currently based on original 2005 control strategy)
- SCADA modifications required to integrate the new PLC addresses

Exclusions:

The following are not included:

- VFD's, motors, instruments, repairs to existing instruments
- Field wiring modifications outside the main control panel
- PLC or SCADA programming/development software
- Spares
- Training

"Page content is subject to Confidentiality Restrictions"

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

>Impact on Facility Operations and Performance

Energy savings will be realized by the improved control of the DO levels in the tanks reducing excess air in turn saving on reduced motor amperage requirements.

City of Bristol, CT	
Energy and Demand Savings Summary	
Measure ID:	**33**
Measure Name:	**Aeration Control Improvement**
Measure Location:	
Engineers:	

Site Name:		**WPCP - Aeration Control Improvement**
Item	Units	Savings
Electricity		
Energy On-Peak	kWh	2,958
Energy Off-Peak	kWh	89,294
Energy Total	kWh	92,252
Demand On-Peak, Monthly	kW	
Demand On-Peak, Annual	kW	
Demand Off-Peak, Monthly	kW	
Demand Off-Peak, Annual	kW	
Fossil Fuel		
Natural Gas (NG)	CCF	
Liquid Propane Gas (LPG)	Gallons	
Steam	Mlbs	
Fuel Oil, #2	Gallons	
Fuel Oil, #4	Gallons	
Fuel Oil, #6	Gallons	
Max Daily Demand (Natural Gas)	CCF (Demand)	
Water		
Water Savings	CF	
Sewer		
Sewer Savings	CF	

timestamp	Hour	Tank 3 DO	Tank 4 DO	Tank 5 DO	Tank 6 DO	Tank 3 Flow (SCFM)	Tank 4 Flow (SCFM)	Tank 5 Flow (SCFM)	Tank 6 Flow (SCFM)	Total (SCFM)	*Total 3&4 SCFM	Tank 3 & 4 Average	Diff. From Setpoint (2.2)	Savings Peak (kWh)	Savings Off-Peak (kWh)	Estimated Blower 4 Amps (y = 0.0594x + 80.082)	Estimated kWh

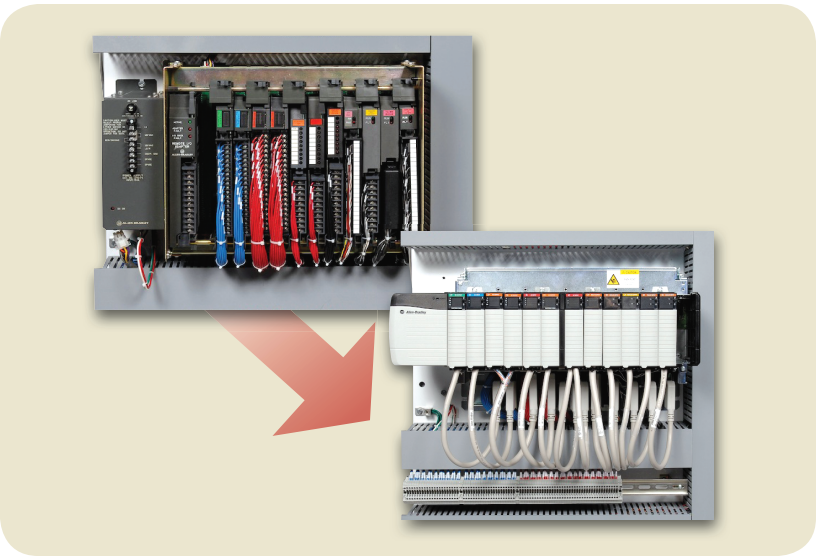
Migration Solutions

PLC-5® Controllers and 1771 I/O to ControlLogix®



Allen-Bradley

Simplifying 1771 I/O Migrations

- Eliminates risk and reduces labor time
  - convert I/O without disturbing field wiring connections
  - no need for drilling and tapping to mount hardware
  - code conversion tools reduce time to rewrite controller program
- Improves migration and planning using Integrated Architecture Builder tool
- Provides network option to preserve existing Remote I/O network with new 1756-RIO module

New Control System Benefits

- Increased flexibility with new open architecture
- Reduced development time and costs through re-use of engineering practices
- Maximized returns on existing assets through improved control and monitoring
- Increased access to plant and production information
- One programming environment for discrete, motion, process, drive, batch, and safety control

Philosophy

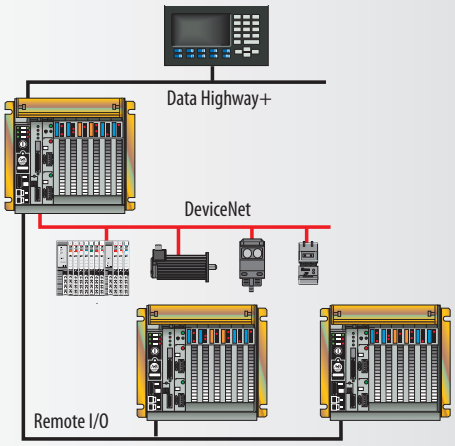
In today's economy it is necessary to have migration solutions that help you to achieve increased productivity and lessen your risk of maintaining your legacy equipment. You need to work with a supplier that has the product, service, and industry knowledge to partner with you on an upgrade strategy that will help you maximize your competitive advantage.

Rockwell Automation and its partners will work with you to outline a plan that fits your application needs and long-term goals. We can help you migrate all at once or in phases, at the pace that is comfortable for you and fits your budget.

With your goals in mind, Rockwell Automation has developed a migration strategy that will allow you to quickly and easily migrate from PLC-5 controller and 1771 I/O to Integrated Architecture, while maintaining the existing field wiring and physical footprint in your control cabinet. This approach will provide you with the following:

- Lower conversion time and labor costs
- Reduce risk by preserving existing field wiring connections
- Lower engineering costs
- Minimizing production downtime

LISTEN. THINK. SOLVE.®

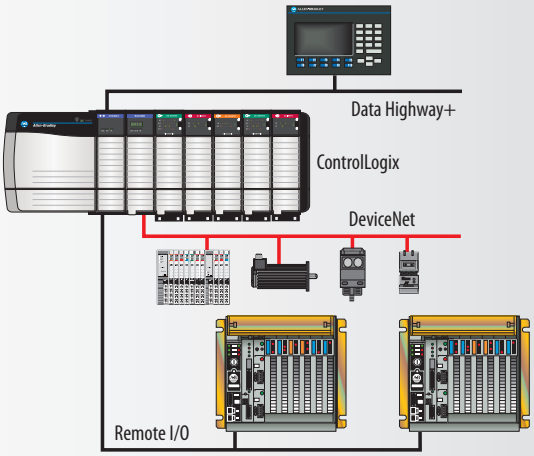


Supporting Your Investment Through a Phased Migration

With industry knowledge and worldwide service support, Rockwell Automation will partner with you to ensure a smooth transition from your PLC-5 controllers and 1771 I/O to the flexible, scalable Integrated Architecture. Here's how:

PHASE I: Application Code Conversion

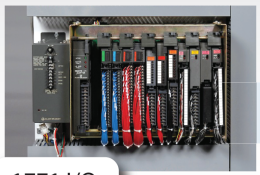
Phase I often begins by converting PLC-5 processor code to Logix code. Our logic and tag database conversion utilities will help you quickly upgrade your processor code allowing you to take full advantage of the Rockwell Automation Logix family of Programmable Automation Controllers (PAC). Once the converted code has been downloaded to the Logix PAC, the new 1756-RIO Remote I/O module can be used as the network interface to the 1771 I/O over the existing Remote I/O network.



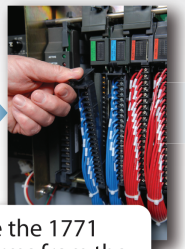
Phase I Tools: Logic Code Conversion Services and 1756-RIO Module

PHASE II: Replace PLC-5 Controllers

Phase II involves replacing the existing PLC-5 controller(s), while continuing to use the 1771 Remote I/O. Replace the PLC-5 controller with the Logix PAC and the 1756-RIO Module. The same 1756-RIO Module used in Phase I is now configured to perform as the master instead of the monitor. The Logix PAC can now control any I/O that resides on an 1771 network.

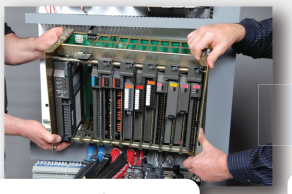


Phase II Tools: 1756-RIO Module

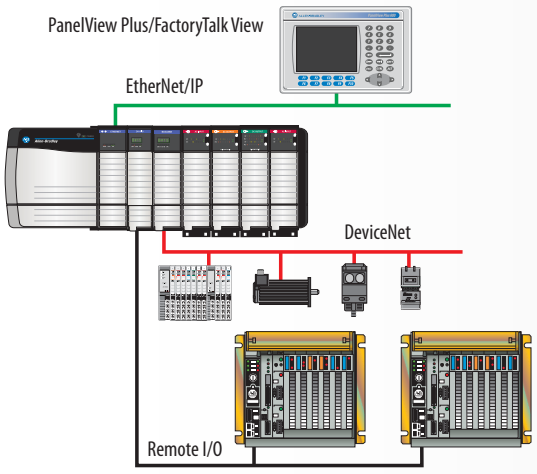


Roadmap to an Easy and Cost-Effective PLC-5 to ControlLogix Migration

Using the I/O Wiring Conversion System can save you hours and eliminate the risk of costly rewiring mistakes.



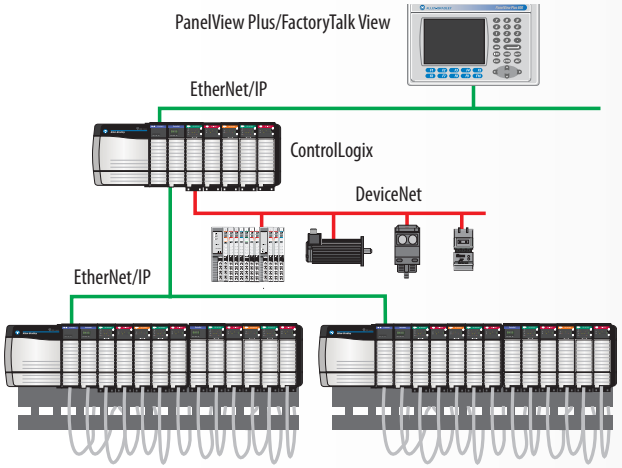
1771 I/O chassis.



Remove the 1771 swing-arms from the 1771 modules.

Remove the 1771 chassis from the control cabinet.

Install the I/O conversion base plate in the control panel. Attach conversion base plate.



PHASE III: HMI/EOI Migration

During this phase of the migration, existing HMIs or EOIs can be replaced with FactoryTalk View products using Application Conversion Utilities (ACU). ACUs not only make operator interface conversion much more cost effective, but give you greater flexibility regarding the final product. This means that you can account for how operators use your equipment and design interfaces that help maximize their productivity. In the end, this will allow you to give your operators the tools they need to get quality product to your customers.

Rockwell Automation currently offers free conversion from WonderWare and Intellution iFIX HMI interfaces.

Phase III Tools: HMI Application Conversion Utility (ACU)

1756 I/O with ControlLogix Swing-Arm Interface

PHASE IV: I/O Replacement

In the final phase of the migration process, the I/O Wiring Conversion System is used to replace the 1771 I/O with the ControlLogix I/O. Because I/O replacement represents a large investment, we provide an approach that's right for your schedule and budget.

The I/O Wiring Conversion System provides a method to connect the existing 1771 I/O wiring to the 1756 I/O modules without disturbing the field wiring connections, dramatically reducing labor time and eliminating the potential for downtime that could result from wiring mistakes during the migration. Planning your migration is more manageable as I/O can be swapped one rack at a time or all at once based on your schedule and budget. In either case, you can run both new and old I/O networks simultaneously. Additionally, I/O cross reference documentation assures correctness and provides historical back-up for future troubleshooting or diagnostics.

Phase IV Tools: I/O Wiring Conversion System, and ProposalWorks Selection Software

Install the conversion modules into the baseplate.

Insert the 1771 swing-arm with attached field wires to the conversion module.

Attach the Bulletin 1492 conversion interface cable to the conversion module and 1756 I/O module.

Converted system.

Complete Conversion Services

In any phase of your conversion project, Rockwell Automation can provide you with technical, industry and project management expertise to help make a migration project easier. We will help you design a plan to account for your short- and long-term goals. You will be assigned a primary engineer who will be responsible for coordinating and scheduling implementation activities and resources, and who will also be the primary communications contact.

On-site Assessment

Using standardized checklists and processes, a job site visit will be perfromed to confirm the project scope, validate risks, review testing and acceptance criteria, and gather the required information and software to convert existing screens and configurations.

You will receive:

- Completed risk assessment form
- Bill of materials
- Conversion acceptance criteria
- Project schedule and timeline
- Required information sent to conversion engineer team

Application Conversion Engineering Services

Using custom-developed proprietary software applications designed to convert existing configurations, our engineers will complete and test the screen conversion process and any required PLC code changes necessary.

We can help you:

- Decrease turn-around time
- Save money
- Minimize errors that can occur in a manual conversion

Deliverables include:

- The existing console and configurations converted to the appropriate Logix controller and FactoryTalk products
- Conversion of the documentation database
- Correct and convert any instruction and/or addressing errors to the new processor family
- Multilingual database conversion offered

Start-up and Acceptance

Prior to installation, comprehensive functional testing will be performed including pre-loading of all applicable software and firmware. Once installation is complete, our engineer, working closely with your plant staff, will conduct an operational compliance review. Comprehensive system documentation will be provided upon project acceptance.

Deliverables include:

- Pre-operational checklist
- Operational test performed and validated by customer
- Customer acceptance
- Necessary documentation, including product sheets and software files

If you need additional help, Rockwell Automation can provide:

Application level phone support during the start-up and debugging phase of the project

Consultation on system re-engineering, operator interface, architecture and communication strategies, training, and on-site start-up is available through our local Rockwell Automation office.

ESM 34:
WPCP - Install High Speed Turbo Blower

ESM Overview

Ameresco proposes to replace one (1) 350 HP blower serving the aeration tanks at the Water Pollution Control Park (WPCP) with a new High Speed Turbo Blower (HSTB). The new blower will not only replace an old blower near the end of its useful life, but will provide a much more efficient and reliable unit.

Figure 34.1: Ameresco proposes to replace the existing 350 HP Blower #1 serving the aeration tanks at the WPCP with a new High Speed Turbo Blower.

ESM Detail

Existing System

The Water Pollution Control Aeration System consists of six (6) aeration tanks operated in two parallel trains. The air is currently supplied to the tanks by two (2) 250 HP blowers, each with VFDs and two (2) 350 HP constant speed blowers without VFDs. Primarily, one 250 HP blower operates most of the time, with one 350 HP blower used only at peak periods during the summer. Staff reports that the 350 HP blowers are near the end of their life, and a replacement blower is needed.

Proposed System

Ameresco proposes to replace one of the existing 350 HP blowers located in the Air Blowers building with a new high speed turbo blower. There are two types of direct drive HSTB bearing technologies: airfoil and magnetic. Ameresco has proposed a magnetic bearing HSTB at this time. The wastewater treatment industry has used magnetic bearing HSTBs longer than airfoil design, and over the years magnetic bearing machines have been very reliable in part due to the magnetic bearing controller that prevents catastrophic failure. Out of the current blower technologies such as multistage centrifugal blowers (MSCB), integrally geared turbo blowers (IGTB), and HSTBs, HSTBs have the greatest upside when considering energy efficiency, footprint, and integrated control systems.

The scope of work includes all mechanical, electrical and demolition work required to install a new High Speed Turbo Blower in place of the existing 350 HP blower serving the aeration tanks at the Water Pollution Control Park.

- Demo and remove the existing Gardner Denver Air Blower #1 located in the 'Air Blowers' building including:
    - Removing existing 350 HP Motor

"Page content is subject to Confidentiality Restrictions"

  - Disconnect electric power at the unit; verify power is off at the disconnect;
  - Remove existing disconnect, leaving the electric feeders in place
- Provide and Install one (1) new Spencer Hi Speed AyrJet AJ215-1 Series Single Stage Centrifugal Blower (or approved equal) with 10" inlet flange connection and with 10" flanged outlet connection.
  - Includes AJ215-1 permanent magnet, lubrication free motor with electromagnetic bearing on drive end and non-drive end and thrust bearing with integrated Variable Frequency Drive (VFD) and Siemens OIT (Operator Interface Terminal)
  - The blower is equipped with a single forged aluminum, machined and balanced impeller, standard electronic air cooling system, glycol/water closed loop cooling system and H2O filter system, Spencer's standard epoxy primer and Urethane finish coat paint System on a carbon steel sound enclosure for quiet 85 dBA sound attenuation and installation indoors.
  - The new blower will have the option of being tied into the new aeration control system or automatically controlled and staged by the Spencer Siemens PLC located in the AyrJet enclosure to an operator DO, flow (SCFM) or RPM set point entered at the OIT on the enclosure.
  - The blower will deliver the following:
    - Maximum: 2500 SCFM-02 of clean air @ 12.00 psig with inlet conditions of 100 °F, 90% relative humidity and 14.55 psia inlet pressure based on 271 ft ASL elevation.
    - Minimum: 1314 SCFM-02 of clean air @ 12.00 psig with inlet conditions of 100°F 90% relative humidity and 14.55 psia inlet pressure based on 271 ft ASL elevation.
  - The blower will include the following:
    - One (1) H2S Sensor – detects levels of H2S that exceed .5 ppm safe operating level that may be detrimental to the safe operation of the blower.
    - Remote connectivity from Bristol CT to The Spencer Turbine Company in Windsor CT via Horizon for password protected monitoring of system operation from Spencer Headquarters for diagnostic and troubleshooting purposes.
    - One (1) Pancake Compressor for operation of the blow off valve (one required and includes 100 ft of flexible tubing.
    - 1 x 10" Discharge Expansion Joint. STC P/N EXP90027.
    - 1 x 10" Inlet Filter/silencer for mounting directly on the blower's inlet flange. STC P/N FSL90236 with felt element STC P/N ELE90088.
    - 1 x 10" Wafer Check Valve. STC P/N VLV90490.
    - 1 x 10" Discharge butterfly valve with lever operator for isolation purposes. STC P/N VLV90037
    - Spare parts – one (1) set consisting of the following:
      - Electronic air filters
      - Glycol coolant
      - H2O filter
- Includes start up assistance consisting of the following services:
  - Controls Engineering Start Up services: one (1) trip, three (3) man-days on site, includes operator training in English language.

Exclusions:

The measure assumes the following:

- Existing isolation valves in air piping are assumed to be in working order.
- Repair of existing piping that shall be tied into as part of this scope of work is excluded.
- Work shall occur during normal business hours.
- Any abatement or remediation of asbestos or other hazardous materials beyond that specifically called out to be included in the scope of work above is excluded from the scope and cost of the proposed work.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. Documents will be submitted to the facilities department for their review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions and submitted in multiple for record.

> Impact on Facility Operations and Performance

Energy savings will be realized by the improved efficiency of the new induction units and reduced maintenance cost requirements.

AyrJet® Series 215
High Speed Turbo Blower

TECHNICAL DATA SHEET

High speed, high efficiency turbo blower provides energy efficient air delivery

Made in the USA by The Spencer Turbine Company, the AyrJet® Series 215 is a high speed, high efficiency single-stage turbo blower, driven by a direct drive oil-free permanent magnet motor. It has an integrated variable frequency drive (VFD) with PLC controls.

The product expands Spencer's product offerings for the water and wastewater treatment industries. The AyrJet Series 215 has flows to 4000 cfm (113 m^3/min) and pressures to 18 psig (124 kPa) and handles applications to 200 hp (149 kW), includes built-in vibration and temperature monitoring, and features best-in-industry wire to air efficiencies. Built-in inlet filtration is standard, and externally mounted inlet filters are available.

The AyrJet's highly engineered, proven technology magnetic bearings monitor and manage shaft position for proactive protection against catastrophic failure.

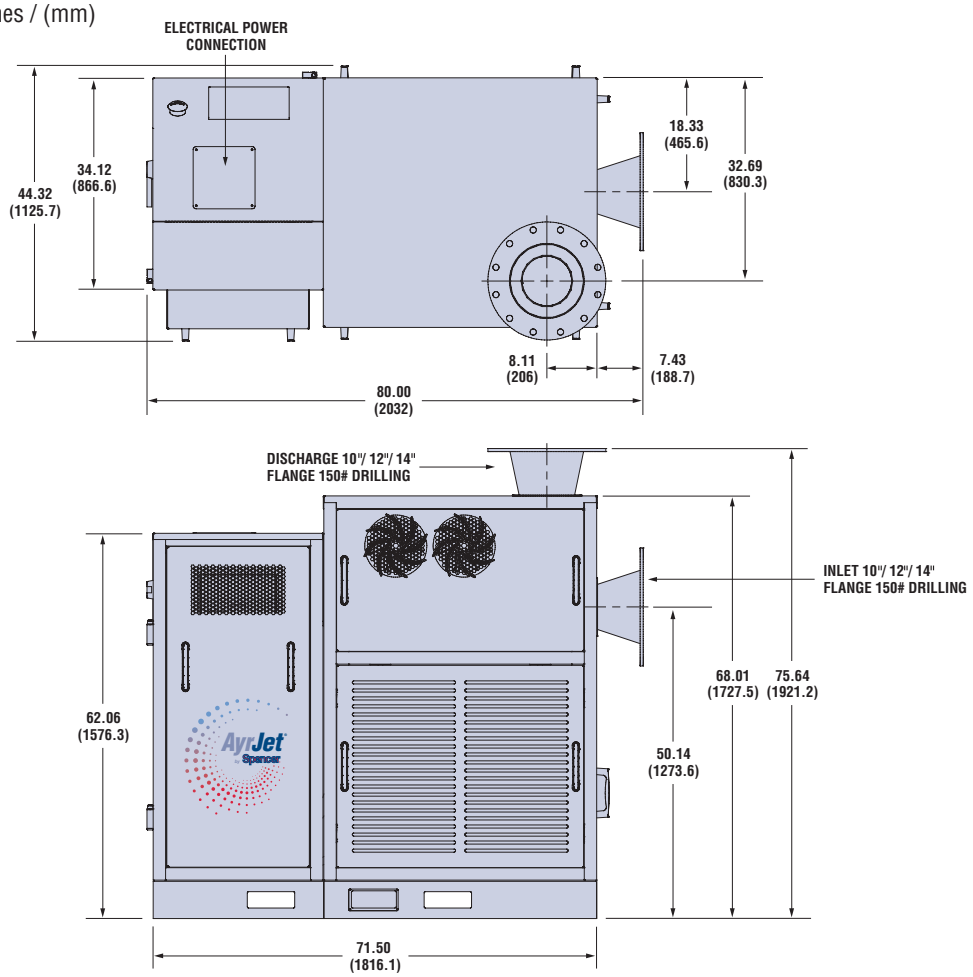
Designed especially to meet continuous-duty aeration requirements with peak energy efficiency, the AyrJet Series 215 is the ideal solution for applications in municipal wastewater treatment plants.

Materials of Construction

- Casing material: Aluminum 356-T6
- Enclosure material: Carbon steel
- Finish: Powder coated

Product Features

Technical Data



- Number of stages: 1
- Operating speed: Up to 27,000 RPM
- Casing design pressure: 50 psig (3.4 bar)
- Inlet connection: Integrated filter (standard); pipe flange (optional)
- Outlet connection: 14" flange
- Seals: Teflon labyrinth impeller seal
- Bearings:
  - Magnetic
  - Self-monitoring
  - Non-contact
  - Built-in power failure back-up protection (UPS system)
  - 2 modes of fail safe (back-up roller bearing and auto shutdown on fault)
- Lubrication: None
- Impeller: Machined high strength forged aluminum – 7075-T6 alloy
- Cooling system: Integrated air
- Filters: Nominal retention 98% @ 15 microns
- First critical speed: 20% over maximum operating
- Vibration free operation

Control System – UL Listed

PLC based with touch-screen and interface to the plant SCADA system

- Blower system start/stop selection and status indicator
- Blower control selection: Local or remote
- Blower set-point entry (RPM or SCFM)

ESM 38: Street Lighting

ESM Overview

Ameresco has developed a Street Lighting system to benefit the residents of Bristol, CT. Our project replaces or upgrades 5,535 exterior fixtures and will enhance the quality of the City's street lighting.

Figure 38.1: New LED street lights will not only improve aesthetics but will also provide substantial energy savings.

ESM Detail

Existing System

Based on the inventory provided by the City of Bristol, our team has identified approximately 5,535 HP Sodium street lighting fixtures ranging from approximately 50 to 500 watts as shown in the Table below. This table shows the expected annual costs for the street lights after the City has purchased them from Eversource.

Type of Fixture	Existing Wattage	Existing Lamp Type	Quantity of Fixtures	Annual kWh	Annual Distribution Charge	Annual Delivery Costs	Annual Supply Costs	Total Annual Costs
Decorative	84	6300 LUMEN HP SODIUM	5	1,726	$61	$43	$145	$249
Decorative	118	9500 LUMEN HP SODIUM	56	27,149	$867	$674	$2,288	$3,828
Decorative	172	16000 LUMEN HP SODIUM	10	7,067	$208	$175	$596	$978
Decorative	472	50000 LUMEN HP SODIUM	1	1,939	$50	$48	$163	$262
Cobra	59	4000 LUMEN HP SODIUM	2	485	$19	$12	$41	$72
Cobra	84	6300 LUMEN HP SODIUM	3,945	1,361,475	$48,287	$33,778	$114,731	$196,796
Cobra	118	9500 LUMEN HP SODIUM	1,022	495,469	$15,821	$12,293	$41,753	$69,866
Cobra	172	16000 LUMEN HP SODIUM	138	97,519	$2,865	$2,419	$8,218	$13,502
Cobra	311	27500 LUMEN HP SODIUM	204	260,660	$7,026	$6,467	$21,966	$35,459
Cobra	472	50000 LUMEN HP SODIUM	124	240,462	$6,220	$5,966	$20,264	$32,449
Flood	311	27500 LUMEN HP SODIUM	16	20,444	$551	$507	$1,723	$2,781
Flood	472	50000 LUMEN HP SODIUM	11	21,331	$552	$529	$1,798	$2,879
Flood	451	36000 LUMEN METAL HALIDE	1	1,853	$48	$46	$156	$250
Totals			**5,535**	**2,537,578**	**$82,574**	**$62,957**	**$213,842**	**$359,373**

Proposed System

Ameresco proposes to replace existing fixtures as described in the table below. Replacement wattages were selected based upon existing wattages, which are assumed to be appropriate for each given application. The proposed distribution and delivery costs are based on the current Eversource rate 117.

Totals			**5,535**	**896,686**	**$3,588**	**$22,121**	**$75,564**	**$101,273**

Ameresco generally considers fixtures manufactured by major, nationally recognized companies with proven track records, extensive testing, and many successful installations. It should be noted that LED lighting is a rapidly advancing technology. To ensure the City is getting the best and latest LED systems available at the time of installation, Ameresco will continue to monitor product developments from all major reputable manufacturers.

These LED fixtures include a "field adjustable option" which allows for customization to local field conditions. Existing streetlight infrastructure is rarely uniform- therefore the ability to increase or decrease light output as needed during installation is a valuable benefit, ensuring a successful project. For example, during installation many customers decide that, due to the improved visual perception of a "white" light source, even lower wattage settings are possible and desirable.

The recommended LED systems will operate in the color temperature range of 4000K which will produce a white light as opposed to the existing HPS systems that produce a yellow colored light. The vast majority of people agree that "white" light improves visibility and aesthetics compared to "yellow" light.

Additionally, the fixtures will include a good quality photocell. Though slightly more expensive than other photocells, we seek to avoid premature failures which cause street lights to operate during the daytime.

Scope of Work

Using the provided inventory and gathered data as a starting point, Ameresco will perform a GIS audit to confirm the street name, fixture type, wattage, and quantity, locations, pole number, control method, obstructions, and equipment condition. To facilitate photometric designs, Ameresco also gathers pole spacing & setback, fixture mounting height, roadway classification, pedestrian conflict, pavement type, etc. The data captured will be provided in formats compatible with typical asset management systems and/or Google Earth. Using the detailed information gathered during the GIS audit, and with input from City staff, our in-house designers produce accurate photometric analysis of key representative locations.

Ameresco will install new street lighting fixtures and retrofits in accordance with the provided inventory from the City of Bristol. Lighting products used will be in accordance with those presented in Appendix II below. The scope of work will include removal of the existing equipment and installation of the new equipment in

"Page content is subject to Confidentiality Restrictions"

accordance with the above referenced lighting fixtures and quantities, proper disposal of all job site waste, including any hazardous waste, and job-site cleanup. Existing poles, arms, brackets, power wiring and controls will be reused, unless otherwise noted.

During construction, Ameresco will remove, package, and recycle all existing lamps that contain mercury and ballasts that contain PCBs or DEHP according to applicable regulations. All installations will be conducted during normal business hours or after normal operating hours if interruption of functions is anticipated. Installations will be coordinated with appointed personnel.

Sizing Considerations

Ameresco believes the new LED system will provide improved visibility when compared to the existing streetlight system. However, compliance with any recommended practice, standard, or code is neither assumed nor guaranteed.

Integration of Proposed Equipment with Existing Systems

The new lighting system, and all components thereof, will be fully integrated into the existing lighting systems. We assume the entire street lighting portfolio comply with, but not limited to, the latest codes, the latest standards, local jurisdictions, and work was done in a quality workmanship manner, per NECA, and other applicable recommend best practices universally accepted throughout the electrical industry. All existing poles, mounting surfaces and structures are assumed to be in acceptable condition to allow the installation of the products indicated in the scope. Required upgrades to meet safety or other codes, and/or to prepare the location for the installation as described above are not included.

Our price includes material, installation labor, and disposal of existing fixtures. Our labor cost assumes a standard 1-1 fixture change-out per Eversource terms, with no additional work or fees included.

>Equipment, Design, and Construction Documentation

The customer provided inventory is the basis for pricing this measure. Prior to construction, the City of Bristol will supply street addresses for all fixtures in this scope with sufficient detail as to enable the installers to accurately locate the fixtures. Ameresco will compile product specification sheets for all specified equipment. These documents will be submitted for review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect “As-Built” conditions, and submitted in multiple for record.

Appendix for ESM 38: Street Lighting

II. Manufacturer Specification Sheets

"Page content is subject to Confidentiality Restrictions"

This page intentionally left blank.

The Result:

The Best Alternative to Traditional Street Lighting

The XSP Series is made possible by innovation in every aspect of the product to deliver outstanding illumination, lasting performance and optimum energy efficiency.

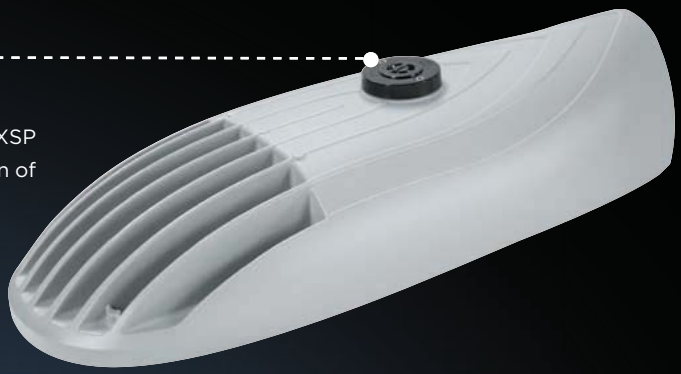
NANOOPTIC PRECISION DELIVERY GRID OPTIC

Efficiently deliver light where you need it.

A NanoOptic Precision Delivery Grid optic efficiently delivers light where you need it, not where you don't. Innovation in LED and optical technologies allows the XSP Series to deliver unmatched target efficacy, and the lowest total cost of ownership compared to previous generations of Cree LED street lights.

HEAT SINK TECHNOLOGY

Maximize LED lifetime.



Passive thermal management approach utilizes a flow through heat sink to efficiently draw heat away from the LED chip package, maximizing performance and reliability.

OCCUPANCY SENSOR

Save more energy when not in use.

Optional occupancy sensor decreases light levels when no traffic is present saving more energy while providing an immediate light increase when traffic is detected.

NEMA RECEPTACLE

Code compliant control.

A NEMA receptacle can be added to the XSP Series Street Light to allow the installation of a photocell control in the field.

RUGGED DELTAGUARD® FINISH

Long lasting protection.

The finest industrial-grade finish available with an industry-leading 10-year warranty, the XSP Series housing includes six cleaning stages, eight pretreatment stages and an epoxy e-coat before the baked on, ultra-durable powder topcoat is applied.

DIMMING

Add light level flexibility.

Standard dimming driver offers compatibility between the XSP Series and many third-party control and monitoring systems.

Additional Options

BACKLIGHT SHIELD

Factory-installed or added in the field, municipalities can meet strict cut-off requirements or address back lighting concerns of residents by utilizing the backlight shield.

BIRD DETERRENT

Birds are prevented from perching on street lights by incorporating spikes on the top of the luminaire.

FIELD ADJUSTABLE OUTPUT

Tune the XSP Series Street Light to the exact needs of a particular location after it's been installed. Plus, a single stocked replacement street light can be adjusted to a variety of outputs used throughout the city.

REMOTE MONITORING COMPATIBILITY

A perfect addition to a city-wide upgrade that includes central monitoring and control, the XSP Series street light was designed to integrate with other control modules.

Pays for Itself, Then Pays You!

Designed from the bottom up as a totally optimized LED street light system, the XSP Series delivers incredible efficiency of up to 100 lumens per watt and up to double the lumens per dollar of previous generations of LED street lights without sacrificing application performance. Beyond substantial energy savings and reduced maintenance, Cree achieved better optical control with our NanoOptic® Precision Delivery Grid™ optic than a traditional cobra head luminaire.

Better payback. Better performance. Better price. While other communities are still paying for costly re-lamping of their legacy systems, the Cree® XSP Series will have returned your investment in lower operating expenses. The best alternative to traditional street lighting that pays for itself, then starts paying you.

PERFORMANCE SUMMARY
Utilizes BetaLED® Technology
NanoOptic Precision Delivery Grid optic
CRI: Minimum 70 CRI
CCT: 4000K (+/- 300K) Standard, 5700K (+/- 500K)
WARRANTY: 10 year limited on luminaire / 10 years on finish†
EPA AND FIXTURE WEIGHT: Reference XSP Series spec sheets
Made in the U.S.A. of U.S. and imported parts

XSP Series

LED STREET LIGHT

XSP1™ LED STREET LIGHT

Standard Module:

3500 Lumens 53 Watts at 4000K
3850 Lumens 53 Watts at 5700K

High Efficacy Module:

4806 Lumens 53 Watts at 4000K
5340 Lumens 53 Watts at 5700K

XSP2™ LED STREET LIGHT

Standard Module:

7000 Lumens 101 Watts at 4000K
7700 Lumens 101 Watts at 5700K

High Efficacy Module:

9612 Lumens 101 Watts at 4000K
10680 Lumens 101 Watts at 5700K

XSP2L™ LED STREET LIGHT

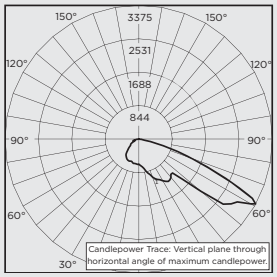
13,428 Lumens 168 Watts at 4000K
14,535 Lumens 168 Watts at 5700K

NANOOPTIC PRECISION DELIVERY GRID OPTICS

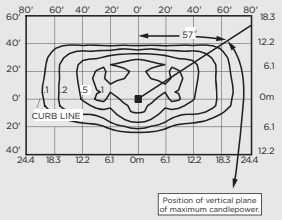
A NanoOptic Precision Delivery Grid optic efficiently delivers light where you need it, not where you don't. Cree innovation in LED and optic technologies created multiple efficiency improvements over previous generations of Cree LED street lights. The XSP Series delivers up to double the lumens per dollar of previous generations of street lights without sacrificing performance. Plus, communities can appear cleaner and safer with uniform, white light.

RUGGED DELTAGUARD® FINISH

The die-cast aluminum housing is protected with DeltaGuard®, the finest industrial grade finish available. Exclusive to all Cree products, the XSP Series finish carries an industry-leading ten-year warranty. Each product follows an immersion process that includes six cleaning stage, eight pre-treatment stages, and an epoxy e-coat before the topcoat is applied. The baked-on, ultra-durable powder topcoat is the last stop to a truly outstanding finish to match a long-lasting LED street light.



CREE INTEGRATED TECHNOLOGY



A giant leap forward, the XSP Series is only made possible by innovation in every aspect of the product. Capitalizing on innovations in Cree LED chips and components, optic technology and design, and overall luminaire design, the XSP Series street light exemplifies the best of Cree Integrated Technology. The result is the best alternative to traditional street lighting.

Section 4:
Financial Results/ Recommendations

Project Specifics

Ameresco initially completed a preliminary site assessment (PSA) and provided the City of Bristol with an interactive cost and savings spreadsheet to assist in selecting a final project scope of work. Based on the City's requested selection, Ameresco has further developed a subset of the ESMs as described in Section 3 of this Preliminary Investment Grade Energy Audit (IGEA). These ESMs represent all refined opportunities, a financeable subset of which will need to be selected to incorporate into an Energy Services Agreement.

Ameresco has preliminarily made a selection base on including the LED lighting option and the steam to hot water conversion for the Police Building. The economics of these selections are shown in this section. A selection sheet with all ESMs developed for this IGEA is included at the end of this section. The specific subset of Section 3 included in this workable project is detailed on the attached ESM matrix and summarized below:

Table 4.1

Financing Term (after construction)	15 years
Estimated Tax-exempt Interest Rate	2.85%
Capital Cost	$12,604,546
Estimated Rebates	$1,613,866
Capital Contribution	$0
Net Assumed Capital Cost	$10,990,680
Guaranteed Cost Savings / Year 1	$864,586
Assumed Utility Escalation Rate	3.00%
Net Excess Cumulative Cash Flow	$53,977

The following table summarizes the ESMs referenced in Section 3 and included in the recommended project scope.

"Page content is subject to Confidentiality Restrictions"

Table 4.2: Measures to be Installed by Building

The following ESM Matrix shows the subset of ESMs as preliminarily selected by Ameresco.

Contract Cost

Ameresco has budgeted specific costs (and savings) for all measures which can be found at the end of this section. Ameresco believes the City desires an Open Book Pricing method, whereby the City can review in detail the cost for the specified scope, including actual contractor and material quotes (Direct Pricing). The Contract Cost is comprised of the sum of the Direct Pricing, the Audit Fee plus the Indirect Pricing (Ameresco Services).

Direct Pricing

Prior to the implementation of the work, Ameresco will solicit pricing from subcontractors and/or equipment providers for each ESM and to the extent possible shall use the most competitive and qualified subcontractor or equipment provider to implement the work relating to such ESM. The determination of subcontractor qualification shall be in Ameresco's discretion and subject to City's approval. All subcontracted services shall be considered part of the Direct Pricing. For the selected subset of ESMs, Ameresco has identified the following Direct Pricing budgets for the project:

Table 4.3: Direct Pricing Budgets

Direct Project Costs		
1A	Lighting System Improvements - Interior - LED	$ 2,497,699
2	Lighting System Improvements - Exterior	$ 378,058
3A	Lighting Controls - LED	$ 67,558
4	Energy Management System Upgrade/Expansion	$ 428,549
6	Demand Control Ventilation	$ 76,148
12	Variable Frequency Drives	$ 29,777
13	Transformer Replacement	$ 434,455
14	Steam Trap Replacement	$ 262,192
15	Pipe & Jacket Insulation	$ 44,041
18	Window Replacements	$ 677,933
21	Boiler Replacement	$ 84,411
23	Steam to Hot Water Conversion	$ 861,263
26	Condensing Unit Replacement	$ 58,513
27	AHU Replacement	$ 73,561
28	Induction Unit Replacement	$ 950,396
33	WPCP - Aeration Control Improvement	$ 59,194
34	WPCP - Install High Speed Turbo Blower	$ 149,350
38	Street Lighting	$ 1,699,914
Totals		**$ 8,833,011**

As stated above, Ameresco will solicit competitive pricing for each ESM and to the extent the total Direct Pricing comes in below anticipated levels, the benefit will be retained by the City and can be used for additional work in the facilities. The City will be presented the competitive bids for each ESM and will have ultimate approval over the selected contractor (and associated price) for the work.

Indirect Pricing

Investment Grade Energy Audit (IGEA) Upset Fee: The fee for performing the Investment Grade Energy Audit of the requested facilities is per the Investment Grade Energy Audit Agreement. As contracted, this cost will not be paid under that agreement as it is incorporated into the cost of the Performance Contract.

"Page content is subject to Confidentiality Restrictions"

Project Design: Ameresco oversight of ESM design as well as Ameresco staff overseeing subcontracted design professionals. Ameresco currently intends to subcontract all design work to local professionals, with our staff overseeing their efforts to ensure the result is consistent with the audit scope.

Performance and Payment Bonds: Performance and Payment Bonds on the gross project value of the project.

Project Management: Ameresco's management of the project and subcontractors, including management reviews of progress and attending project construction meetings periodically throughout the construction period.

Commissioning: Ameresco staff performing and overseeing commissioning activities required to ensure system is functional and meets the design intent.

Training: Ameresco's training of City personnel at the time of commissioning, prior to turn over of the project to City personnel.

Construction Monitoring and Verification: Measurement and verification activities performed at the commissioning phase, as described in the Section 7 Measurement and Verification Plan.

Permits: Ameresco's will obtain all necessary permits for the ESMs.

Overhead and Profit: Ameresco's recovery of corporate overhead and recognition of profit

Indirect Pricing shall be calculated based upon the estimated Direct Pricing. Indirect Pricing shall equal the product of the Direct Pricing and a multiplier specific to individual ESMs as per the Table 4.4:

Table 4.4: Indirect Pricing

Ameresco Project Services		
	Investment Grade Energy Audit Upset Fee	$ 150,000
	Project Design	$ 576,563
	Performance Bond	$ 105,905
	Project Management	$ 631,312
	Commissioning	$ 181,900
	Training	$ 121,267
	Construction Monitoring and Verification	$ 128,846
	Permits	$ 109,140
	Overhead	$ 883,301
	Profit	$ 883,301
Totals		**$ 3,771,535**

Any cost not specifically included in the Indirect Pricing shall be included in the Direct Pricing, inclusive of all materials, labor, subcontractor bonding, and other services or fees required to successfully implement the Scope of Services.

In the event the Contract Cost is anticipated to exceed the "not to exceed" total stated above, the City and Ameresco will modify the Scope of Services in order to remain within the stated maximum.

Savings Coverage:

It is important to note that revisions to the project scope during the design phase may have an effect on the savings levels and overall project economics. The City and Ameresco need to remain cognizant of the ability to meet the guaranteed savings levels specified in the Contract and aware that changes in project scope may necessitate a modification to Ameresco's guarantee. In the event the proposed design adversely affects the ability to meet these obligations, Ameresco and the City will need to mutually agree upon revisions to the project scope or contract. Ameresco shall provide reasonable efforts to rerun project economics based upon actual costs and savings levels during the design phase, including for the addition of other opportunities, to show the effect of scope/pricing changes on the overall economics.

Rebates / Incentives

Ameresco has estimated rebates available for this project into the net financed cost of the project. These estimates are based on our expectations for incentives available through regular utility programs, but we are unable to guarantee the exact final level of rebates the City will recognize as a result of implementing this project. Any additional rebates will be for the benefit of the City, and the City shall be responsible for addressing any financial shortfalls as a result of fewer than expected rebates. Ameresco's pricing is based on payment of the gross project cost, not the cost net of rebates, based upon a percentage of completion.

Table 4.5: Rebates by Measure

ESM #	ESM Name	Incentive
1A	Lighting System Improvements - Interior - LED	$ 659,972
2	Lighting System Improvements - Exterior	$ 174,319
3A	Lighting Controls - LED	$ 27,030
4	Energy Management System Upgrade/Expansion	$ 51,878
6	Demand Control Ventilation	$ 33,163
12	Variable Frequency Drives	$ 15,530
13	Transformer Replacement	$ 120,090
14	Steam Trap Replacement	$ 14,237
15	Pipe & Jacket Insulation	$ 15,206
18	Window Replacements	$ -
21	Boiler Replacement	$ -
23	Steam to Hot Water Conversion	$ 2,931
26	Condensing Unit Replacement	$ 2,451
27	AHU Replacement	$ 1,498
28	Induction Unit Replacement	$ -
33	WPCP - Aeration Control Improvement	$ 33,211
34	WPCP - Install High Speed Turbo Blower	$ 19,309
38	Street Lighting	$ 443,041
		$ 1,613,866

"Page content is subject to Confidentiality Restrictions"

Structure of Financing Arrangement

Ameresco assumes the City will be issuing financing based on parameters referenced in the attached pro forma cash flow, but Ameresco can work with the City to identify other financing arrangements.

Ameresco included an allowance for construction period interest in the repayment cost as our construction period payments are based upon a percentage of the gross project size completed each month. This allowance, approximately $490,835, is based upon a capitalized interest calculation and may be more or less than that actually structured by the City as part of its financing.

Interest Rate and Financing Term

For the assumed financing, Ameresco estimated the interest rates based upon an estimated third party Tax Exempt Lease Purchase (TELP) financing rate. The ultimate rate may vary based on the City's credit rating or the ultimate financing structure, but Ameresco does not guarantee it will be less than or equal to the assumed 2.85% interest rate used in the pro forma cash flow. Any PURA incentives that may be available have not been included in this estimated rate.

The financing term is based on 15-years of repayment, which is after an assumed 18 months of construction.

Equipment Ownership and Security Interest Required

Title to the equipment installed by Ameresco will be transferred to the City of Bristol upon the City's acceptance of the installation and payment in full.

Energy Savings Guarantee

As an integral part of its contract with the City of Bristol, Ameresco will guarantee energy savings over the full term of the contract. Ameresco's guarantee provides assurance to the City that the cash inflows from the project, which include both energy and operational cost savings and any additional utility rebates, will exceed the City's cash requirements for the project, the loan payments and any on-going payments for the provision of operations and maintenance services as delineated below. The City of Bristol will retain actual annual energy cost savings that exceed Ameresco's guarantee.

At any time during the contract term should there be a shortfall in energy cost savings Ameresco will make a payment to the City of Bristol in the full amount of the shortfall. Payments can be in the form of a check or a credit against future billings from Ameresco, at the City's option.

Construction Financing

Ameresco assumes the financing proceeds will be funded into an escrow or similar account at the inception of the project. Monthly drawings are made against the escrow as the project is implemented, based upon a percentage of work completed for the preceding period.

"Page content is subject to Confidentiality Restrictions"

Project Labor

Ameresco has based its labor costs on current prevailing wage rates for all expected construction disciplines. Ameresco can solicit competitive pricing on various labor components and work with the City to select the ultimate contractor used for installation. Ameresco was not given explicit direction to use union labor and therefore has at a minimum ensured all labor is comparable to current prevailing wage rates. Should the City require union labor or other specific labor agreements other than prevailing wage, the cost to perform the work included in this project may go up at the City's expense.

Notes:
1 This Proforma Cash Flow reflects an estimated financing rate of 2.85%. The actual rate will increase or decrease based on market conditions and customer credit rating at the time of funding.
2 Savings are based on current utility rate structures and usage information provided for purposes of this project.

Section 5:
Preliminary Implementation Schedule

The following schedule represents the estimated project schedule from the Preliminary Investment Grade Energy Audit submission to final construction completion. This preliminary schedule is subject to revision based on actual contract execution date and changes in project timing. Naturally, all scheduling will be coordinated with City personnel to ensure that no work will interfere with normal City operations.

This preliminary schedule represents a roll-up of major project activities from execution of the Agreement, through completion of improvements and the City's acceptance, to commencement of performance period services. As construction of this project requires significant involvement of City personnel for review and approval of project specifications, design work, and selection of subcontractors, the schedule is intended to be representative of the expected construction period but in no way is a guarantee that any specific activities or the aggregate project will be completed in accordance with the specified periods.

AMERESCO

Section 6:
Preliminary Commissioning Plan

The commissioning of this project will utilize industry accepted standards to insure all ESMs are completed and operating as designed and intended. Ameresco will utilize previously developed documents and strategies to insure the ESMs are installed according to the project specifications, that the installing contractor has provided all the necessary deliverables noted in the specifications, the equipment performs as expected, the facility staff have been properly trained, Operations & Maintenance documents have been provided, and the Measurement &Verification portion of the contract can successfully oversee the operation and maintenance of the equipment thus insuring the project meets the energy and operational expectations of Ameresco and the City.

Commissioning is the systematic process of ensuring all mechanical equipment related to the project performs interactively according to the owner's requirements and the design narrative. Commissioning includes Design Review, Submittal Review, Pre-functional Testing, and Functional Testing. Commissioning additionally ensures that the owner has received all of the deliverables as specified and that the building staff, through supervised training, is prepared to take over the operations and maintenance of the systems and equipment.

The purpose of the commissioning plan is to provide direction for the commissioning process during construction. The plan will identify what equipment and systems will be commissioned. It will also identify parties involved in the commissioning process, their roles, and required deliverables. The commissioning plan will also identify the goals of commissioning and/or the project, if they have not been clearly defined elsewhere.

This preliminary plan will detail the following:

- A breakdown of each ESM and the level of pre-functional and functional testing including areas of responsibility and deliverables. This breakdown will be provided in an easy to read table.
- Acceptance and turn over procedures including the integration of commissioning activities.
- A brief description of commissioning documents.
- A training agenda and sample training goals for each ESM

"Page content is subject to Confidentiality Restrictions"

This page is intentionally left blank.

ESM Performance Testing Matrix

Pre-functional and functional reports shall be modified during the design and construction phases based on actual system design and installation. Results of Pre-functional Testing, as necessary, and Functional Testing will be included in the O & M Manuals.

ESM	Equipment/systems to be performance tested	Observations, Tests and Inspections during Construction (Pre-Functional)	Pre-functional Responsibility	Observations, Tests and Inspections Prior to Acceptance (Functional)	Functional Responsibility	Testing Documentation
ESM 1: Lighting System Improvements - Interior	Lighting fixtures	Verify operation of all fixtures as completed Inspect equipment and compare to approved submittals	Electrical Contractor Ameresco	Verify operation of all newly installed fixtures and/or lamps.	Electrical Contractor Ameresco	Commissioning Data Sheets will be completed for a statistically significant sample.
ESM 2: Lighting System Improvements - Exterior	Lighting fixtures	Verify operation of all fixtures as completed Inspect equipment and compare to approved submittals	Electrical Contractor Ameresco	Verify operation of all newly installed fixtures and/or lamps.	Electrical Contractor Ameresco	Commissioning Data Sheets will be completed for a statistically significant sample.
ESM 3: Lighting Controls	Lighting Controls	Verify operation of all sensors as completed. Time delays and/or sensitivity settings will be set.	Electrical Contractor Ameresco	Visual inspection of controls to ensure that they are installed and functioning properly	Electrical Contractor Ameresco	Results of visual inspection of lighting controls will be provided in spreadsheet format indicating type of device, location, fixture served, and operating status.
ESM 4: Energy Management System Upgrade/Expansion	Schedules, setpoints, sequences, lockouts, alarms, interlocks, control strategies, trending	Provide start up sheets for all controllers and programmable thermostats. Inspect construction progress for conformance to project specifications.	Controls Contractor Ameresco	Ameresco will Functionally test (Ft) the new controls by utilizing the approved sequence of operations to create project specific test sheets. The Ft's will document each step of the sequence and the outcome in order to show conformance to the design intent. Controls testing will be combined with individual equipment testing as it relates to operation and control. Sample sheets to show the depth and detail of testing have been included in appendix A.	Controls Contractor and Ameresco	FPT Reports will be completed for each system.
ESM 6: Demand Control Ventilation	Outside Air Dampers and related sensors	Verify operation of all dampers as completed.	Controls Contractors	Functional testing will be conducted and include the operation of the equipment as well as tie ins to the controls. See sample FPT's in the Appendix.	Controls Contractor Ameresco	FPT Reports will be provided for each system component.
ESM 12: Variable Frequency Drives	New VFDs	VFD start-up sheets will be provided by the manufacturer. Inspect construction progress for conformance to project specifications.	Controls Contractor Ameresco	Perform FPT in accordance with sample FPT Reports in the Appendix.	Controls Contractor Ameresco	FPT Reports will be completed for each system.
ESM-13: Transformer Replacement	Transformers	Verify operation and loading of equipment as installation is completed	Electrical Contractor	Visual inspection of all newly installed transformers to verify they are in place and properly installed.	Electrical Contractor AMERESCO	Results of transformer visual inspection will be provided in written format indicating location and size
ESM 14: Steam Trap Replacement	Steam traps	Inspect construction progress for conformance to project specifications	Ameresco	Functional testing will be conducted on all steam traps at commissioning.	Plumbing Contractor Ameresco	FPT Reports will be provided for all steam traps.
ESM 15: Pipe & Jacket Insulation	Insulation	Inspect construction progress for conformance to project specifications.	Ameresco	Visual inspection of insulation type and thickness for conformance with design documents and work scope.	Installation Contractor Ameresco	Results of insulation visual inspection will be provided in written format indicating insulation location, insulation type, and insulation thickness.
ESM 18: Window Replacements	Windows	Inspect construction progress for conformance to project specifications	Ameresco	Verify proper operation of each window and weather tightness.	Installation Contractor Ameresco	A brief report noting locations and condition of windows will be provided following the inspection by Ameresco.
ESM 21: Boiler Replacement	Boilers, Burners and Controls.	Start-up reports from installing contractors. Boiler tuning sheets Pre-functional check sheets	Mechanical Contractor Ameresco	Functional testing will be conducted and include the operation of the boilers and burners as well as tie ins to controls. See sample FT's in the Appendix.	Mechanical Contractor Ameresco	FPT Reports will be provided for each boiler.
ESM 23: Steam to Hot Water Conversion	Boilers, pumps, Air Handling Unit, Pipe, hot water coils.	Start-up reports from installing contractors. Boiler tuning sheets Pre-functional check sheets	Mechanical Contractor Ameresco	Functional testing will be conducted and include the operation of the boilers and burners as well as tie ins to controls. See sample FT's in the Appendix.	Mechanical Contractor Ameresco	FPT Reports will be provided for each boiler.

"Page content is subject to Confidentiality Restrictions"

ESM	Equipment/systems to be performance tested	Observations, Tests and Inspections during Construction (Pre-Functional)	Pre-functional Responsibility	Observations, Tests and Inspections Prior to Acceptance (Functional)	Functional Responsibility	Testing Documentation
ESM 26: Condensing Unit Replacement	Condensing Unit	Start-up reports from installing contractors. Manufacturer start up reports Pre-functional check sheets	Manufacturer's Representatives Mechanical Contractor Ameresco	Functional testing will be conducted and include the operation of the condensing unit as well as tie ins to the EMS. See sample FT's in the Appendix.	Manufacturer's Representatives Mechanical Contractor Ameresco	FPT Reports will be provided for each condensing unit.
ESM 27: AHU Replacement	Air handling units	Start-up reports from installing contractors. Manufacturer start up reports Pre-functional check sheets	Manufacturer's Representatives Mechanical Contractor Controls Contractor Ameresco	Functional testing will be conducted and include the operation of the equipment as well as tie ins to the EMS. See sample FT's in the Appendix.	Manufacturer's Representatives Mechanical Contractor Controls Contractor Ameresco	FPT Reports will be completed for each system.
ESM 28: Induction Unit Replacement	New Induction Units	Start-up reports from installing contractors. Pre-functional check sheets	Mechanical Contractor Ameresco	Functional testing will be conducted and include the operation of the new equipment as well as tie ins to controls. See sample FT's in the Appendix.	Manufacturer's Representatives Mechanical Contractor Ameresco	FPT Reports will be provided for each system.
ESM 33: WPCP – Aeration Control Improvement	Setpoints, sequences, alarms, interlocks, control strategies, trending	Provide start up sheets for all controllers Inspect construction progress for conformance to project specifications.	Controls Contractor Ameresco	Ameresco will Functionally test (Ft) the new controls by utilizing the approved sequence of operations to create project specific test sheets. The Ft's will document each step of the sequence and the outcome in order to show conformance to the design intent. Controls testing will be combined with individual equipment testing as it relates to operation and control. Sample sheets to show the depth and detail of testing have been included in appendix A.	Controls Contractor and Ameresco	FPT Reports will be completed for each system.
ESM 34: WPCP – Install High Speed Turbo Blower	High Speed Turbo Blower	Start-up reports from installing contractors. Manufacturer start up reports Pre-functional check sheets	Manufacturer's Representatives Mechanical Contractor Ameresco	Functional testing will be conducted and include the operation of the Turbo Blower as well as tie ins to the control system. See sample FT's in the Appendix.	Manufacturer's Representatives Mechanical Contractor Ameresco	FPT Reports will be provided for the new Turbo Blower.
ESM 38: Street Lighting	Lighting fixtures	Verify operation of all fixtures as completed Inspect equipment and compare to approved submittals	Electrical Contractor Ameresco	Verify operation of all newly installed fixtures and/or lamps.	Electrical Contractor Ameresco	Commissioning Data Sheets will be completed for a statistically significant sample.

"Page content is subject to Confidentiality Restrictions"

Acceptance Procedures and Documentation

Upon completion of the pre-functional testing, completion of the functional performance testing, and completion of the training as described below, Ameresco shall issue Certificates of Substantial Completion for each ESM that is providing a performance and financial benefit to the City. The Certificates will have accompanying punch lists; all punch list items that could directly affect the potential to generate energy cost savings must be completed prior to functional performance testing. It is important to note that the warranty periods for equipment/systems that are in operation will begin upon execution of the Certificates of Substantial Completion, which is after completion of functional performance testing.

Upon successful completion of all functional performance tests and all construction period M&V testing, as prescribed in Section 7, the ESMs are deemed to have the potential to achieve the estimated energy cost and maintenance savings. Ameresco will also provide applicable training required to allow the City to assume operational control and maintenance responsibilities for the ESMs, such training to be as described in the section on training, below. Ameresco will then formally request from the City an inspection of the work completed. A Certificate of Substantial Completion will accompany the formal inspection request. The Certificate of Substantial Completion formally acknowledges that the work has been completed, or a portion thereof, and is being accepted. Some ESMs may not be able to be completed at that time due to circumstances beyond the control of Ameresco. In these instances, a percentage complete will be assigned to the ESM and a punch list of outstanding items will be included. These items typically will not have an impact on the savings or the potential to achieve savings since the functional performance test will have been completed prior to requesting the final inspection. All outstanding punch list items will be completed as soon as possible.

Commissioning will include two levels of testing for equipment and systems, Pre-functional Testing and Functional Performance Testing; Pre-functional testing checks the readiness of equipment to work within the system and includes contractor or manufacturer start up sheets. Functional testing tests the operation of the system, specifically the sequence of operations.

Pre-Functional Testing

The PFT is a validation of individual equipment for readiness to work in conjunction with the associated system. The contractors must successfully complete the pre-functional test for each component of a given system prior to formal functional performance testing of equipment and subsystems of the given system. Pre-functional Tests will augment and are combined with the manufacturer's start-up checklist. Completion of the Pre-functional Tests will allow the contractor to ensure that the overall installation reflects the requirements of the plans, specifications and manufacturer's installation manuals.

Functional Performance Testing

The FPT is the equipment or system performance evaluation under operating conditions for compliance with the project documents (installation drawings, one line diagrams, Sequences of Operation, and specifications including changes during construction). It verifies equipment or system component performances, e.g., temperature, humidity, pressure, flow, start/stop etc.

"Page content is subject to Confidentiality Restrictions"

Functional testing is the dynamic testing of systems (rather than just components) under full operation. Systems are tested under various modes, such as during high/low heating loads, high/low steam loads, component failures, etc. The systems are run through all of the control system's sequences of operation and components are verified to be responding as the sequences state. Ameresco develops the FPT procedures in a sequential written form, coordinates, oversees and documents the actual testing, which is performed with assistance, typically from the controls contractor.

The Energy Management or Control system will be used to verify and document the functional performance of the commissioned systems. Since the EMS is critical to the FPT process, the EMS PFT (performed by the contractor point-to-point checkout and controller start up reports) must be complete and accepted before any FPT can begin. Much of the BMS FPT is accomplished during the testing process for the equipment and systems. For example, while testing the hot water heating pumps, the BMS is tested at the same time for many of its individual features such as set point control and scheduling.

Inspection reports

Inspection reports are brief reports completed by an inspecting Ameresco employee that document the extent of construction, verify conformance to approved submittals and construction documents, and identifies any deficiencies. The intent of the reports are to insure equipment is properly supplied to the construction site and installed properly, this will aid in a quick and successful Functional test and final sign off of ESM's.

Operations and Maintenance Manuals

O & M Manuals will be provided upon completion of all functional performance tests and upon completion of the as-built documentation. O&M's will be provided for each ESM and be related to that specific ESM. The manuals will be provided as hard copy binders as well as electronic copies on a CD. A sample O&M outline follows:

Section I – System Description

- A brief description of the system, its major components and function.
- Control strategies and sequences describing start-up, modes of operation, and shutdown.
- Energy conservation strategies important to the selection of the equipment.

Section II – Equipment Data Sheets

- Corrected shop drawings, including performance curves, efficiency ratings, features and options
- Approved submittal
- Copies of approved certifications and factory test reports (where applicable)
- Wiring and control schematics detailing the operation and control of each component for troubleshooting

Section III – Maintenance

- Manufacturer's Operation and Maintenance instructions

"Page content is subject to Confidentiality Restrictions"

- Manufacturer's Spare Parts Lists
- Manufacturer recommended spare parts inventory list
- Manufacturer's recommended maintenance frequency
- Name, address, and telephone number of the manufacturer's local representative for each type of equipment for replacement parts and service.

Section IV– Test Reports

- Pre-functional Reports (Equipment start-up reports and commissioning data sheets)
- Functional Reports (System start-up reports and functional performance tests)
- Copies of welder certifications (where applicable)
- Non-destructive testing reports (where applicable)
- Hydrostatic/pneumatic pipe testing reports (where applicable)
- Water treatment analysis and report (where applicable)
- Testing and Balancing reports (where applicable)
- Other reports as applicable

Section V – Warranties/Guarantees

- A typewritten warranty, on company letterhead, for each system installed. The warranty shall state the system and components covered, the duration of the warranty period, and emergency contact phone numbers for service and repair.
- Warranties/guarantees from subcontractors or equipment suppliers.

Training Plan

Training and orientation on the systems installed will vary depending on the complexity of the specific equipment installed for each ESM. At a minimum each ESM O&M manual will be reviewed with the staff to review the installed measure, scope of work, effect on energy consumption, and warrantee information. Additionally a site inspection to review a typical installation will be conducted. Ameresco will be present at all training sessions to insure training is provided as required and is thorough, a brief training report will be issued for each session that will include a sign in sheet and instructor contact information. Training is anticipated to be provided at the following levels depending on ESM complexity:

1. For systems and/or equipment that are essentially direct replacements of existing equipment, and where no additional specific skills will be required to perform operations and maintenance functions, training will be limited to a general overview of the equipment installed and a review of the O&M manuals. Training will be directed to operating personnel. Training should be provided at the completion of construction of each of the ESMs and will generally last less than a day.

2. For systems/equipment that are new to the site and require more in-depth understanding as to their function and operation, training will include classroom time that will provide an overview of the

"Page content is subject to Confidentiality Restrictions"

implemented technology and design intent as well as O&M review. Training will be geared towards operations staff as well as direct supervisors. Following the classroom training, a site tour will be conducted to view the installation and operation of the equipment, a "hands on" session of training will be provided at this time. Training will be scheduled to coincide with the completion of construction and should be anticipated to last as long as a full day for each ESM.

3. For systems and/or equipment that are new to the site and more complex in nature, training will be directed to the operations staff, immediate supervisors, and site supervisors as necessary. In general, training will consist of classroom training followed by hands-on instruction in the field. Training will be provided through a complement of Ameresco personnel, design engineers, installation contractors, and manufacturer's representatives. Specifics on the training program, including schedule and training materials, will be further refined during the design process, but the training, in general, will consist of the following:

    a. Explanation of the design concept

        i. Design intent

        ii. Energy efficiency considerations

        iii. Seasonal modes of operation

        iv. Emergency conditions and operation

        v. Comfort conditions and indoor air quality

    b. Systems operation

        i. Operation of individual components, instruction from authorized factory technicians, if required

        ii. Physical location of critical shut-off valves, fire, smoke, and balancing dampers, relief valves, safeties, and control panels

        iii. System operational procedures for all modes in manual and automatic modes

    c. Operation of the control systems

        i. Sequences of Operation

        ii. Use of Graphical User Interfaces

        iii. Alarms and problem indicators

        iv. Diagnostics and corrective actions

"Page content is subject to Confidentiality Restrictions"

d. Service and Maintenance

   i. Use of the O&M manuals

   ii. Instruction and logging procedures for maintenance

   iii. Instruction from authorized factory technicians, where applicable

   iv. Troubleshooting and investigation of malfunctions

   v. Recommended procedures for collecting, interpreting, and storing specific performance data

Training will be provided during construction, commissioning, and acceptance phases as dictated by the complexity of the ESM. It is also anticipated that additional training will be provided after 6 and 12 months from acceptance of the ESMs to ensure that the equipment is being operated and maintained in accordance with manufacturer's recommendations and within contract requirements so that the potential to generate cost savings is not jeopardized. All training activities will be coordinated carefully with City facilities personnel.

Training Goal Matrix

This is a general outline of training for each ESM. Specific times and topics will be adjusted as final equipment selections are made.

ESM	Equipment/ Systems	Classroom Training	Hands on Instruction	Personnel Groups Trained
ESM 1: Lighting System Improvements – Interior	Lighting Fixtures	1 hour to go over lighting, lighting controls and operation of controls	Site review to identify typical locations for lighting retrofits and controls.	Facility Engineers Facility Technicians O&M Personnel
ESM 2: Lighting System Improvements – Exterior	Lighting Fixtures	1 hour to go over lighting, lighting controls and operation of controls	Site review to identify typical locations for lighting retrofits and controls.	Facility Engineers Facility Technicians O&M Personnel
ESM 3: Lighting Controls	Lighting Controls	Included with ESM 1 and 2	Provide training on repair or maintenance on new technologies.	Facility Engineers O&M Personnel
ESM 4: Energy Management System Upgrade/Expansion	New and Existing Energy Management Systems	16 hours of classroom training to review the steps to change schedules, set-points, generate trend logs, reset alarms, interpret alarms, and review the control sequences. Classroom training will be broken up into several training sessions	Site review to identify controlled equipment, sensor types and locations.	Facility Engineers Facility Technicians Supervisors O&M Personnel
ESM 5: Demand Control Ventilation	New and Existing Energy Management Systems	To be combined with EMS training	Site review to identify implementation locations and discuss energy savings potentials.	Facility Engineers Facility Technicians O&M Personnel
ESM 12: Variable Frequency Drives	VFDs	2 hours of training to evaluate the new VFD equipment and review of the control sequences.	Onsite overview of equipment, how to adjust controls and settings.	Facility Technicians O&M Personnel
ESM 13: Transformer Replacement	Transformers	Review of O&M	None	Facility Technicians O&M Personnel
ESM 14: Steam Trap Replacement	Steam Traps	None	1 hour, review scope of work and visit sample locations	Facility Engineers Facility Technicians O&M Personnel
ESM 15: Pipe & Jacket Insulation	Pipe Insulation	None	0.5 hour of hands on training to discuss reinstalling insulation during maintenance operations	Facility Technicians O&M Personnel
ESM 18: Window Replacements	Windows	Review of O&M	None	Facility Technicians

"Page content is subject to Confidentiality Restrictions"

ESM	Equipment/ Systems	Classroom Training	Hands on Instruction	Personnel Groups Trained
ESM 21: Boiler Replacements	New Boilers and Burners	4 hours of training to evaluate the new heating equipment and review of the control sequences.	Review of the boiler components, demonstrate the control sequences, show how to change the setpoint and troubleshoot alarms.	Facility Engineers Facility Technicians O&M Personnel
ESM 23: Steam to Hot Water Conversion	New Boilers and Burners, terminal heating units	4 hours of training to evaluate the new heating equipment and review of the control sequences.	Review of the boiler components, demonstrate the control sequences, show how to change the setpoint and troubleshoot alarms. Review new terminal heating equipment and controls.	Facility Engineers Facility Technicians O&M Personnel
ESM 26: Condensing Unit Replacement	Condensing Unit	1 hour of training to evaluate the new cooling equipment and review of the control sequences.	Review of the cooling components, demonstrate the control sequences, show how to change the setpoint and troubleshoot alarms.	Facility Engineers Facility Technicians O&M Personnel
ESM 27: AHU Replacement	New AHU	1 hour of training to evaluate the new equipment and review of the control sequences.	Review of the equipment components, demonstrate the control sequences, show how to change the setpoint and troubleshoot alarms.	Facility Engineers Facility Technicians O&M Personnel
ESM 28: Induction Unit Replacement	New Induction Units	1 hour of training to evaluate the new equipment and review of the control sequences.	Review of the equipment components, demonstrate the control sequences, show how to change the setpoint and troubleshoot alarms.	Facility Engineers Facility Technicians O&M Personnel
ESM 33: WPCP – Aeration Control Improvement	Updated Aeration Controls	8 hours of classroom training to review the steps to change, set-points, generate trend logs, reset alarms, interpret alarms, and review the control sequences.	Site review to identify controlled equipment, sensor types and locations.	Facility Engineers Facility Technicians Supervisors O&M Personnel
ESM 34: WPCP – Install High Speed Turbo Blower	High Speed Turbo Blower	1 hour of training to evaluate the new blower equipment and review of the control sequences.	Review of the blower components, demonstrate the control sequences, show how to change the setpoint and troubleshoot alarms.	Facility Engineers Facility Technicians O&M Personnel
ESM 38: Street Lighting	Lighting Fixtures	1 hour to go over lighting, lighting controls and operation of controls	Site review to identify typical locations for lighting retrofits and controls.	Facility Engineers Facility Technicians O&M Personnel

Functional Performance Test (FPT) Report

Energy Management System

Project:_____ Date: _____

System:_____ Location:_____

Functional Performance Test: Performance Partner shall verify the operation of the automatic controls to comply with the contract documents. As a minimum, the following functions shall be tested:

Compliance Checklist:

1. Verify that the wiring is correct to each point. **Compliance?** _____

   (Attach a comprehensive list of points with this completed form)

2. Verify that the software address is correct. **Compliance?** _____

   (Attach a list of all software addresses and a brief description of the address (i.e., OADB = Outside Air Dry Bulb temperature in degrees Fahrenheit) with this completed form)

3. If the device is/has an actuator, verify free movement through its full range. **Compliance?** _____

4. Verify stroke/range calibration for all controlled valves, dampers, actuators, fans, pumps, etc.

   Simulate maximum and minimum transmitter signal values and verify minimum and maximum controller output values and verify the stroke and capacity range for each control device. *(Provide completed calibration forms for all sensors and controllers.)* **Compliance?** _____

5. Verify that the software with the correct setpoints has been downloaded for each control loop. **Compliance?** _____

6. ESM Specific:

- Verify the three EMCS front-end computers are installed and operationally identical. **Compliance?** _____
- Verify all inoperable control devices, which were existing, have been replaced with new functional units as per scope. **Compliance?** _____

"Page content is subject to Confidentiality Restrictions"

- Verify existing Honeywell, Trane, and Automated Logic points have been migrated to the new Johnson EMCS. **Compliance?**_____
- EMCS logic:

  Scheduled start / stop. **Compliance?** _____

  Optimum start. **Compliance?** _____ *(Attach control algorithm used to determine optimum start time based on historical weather data and space response time)*

  Enthalpy controlled economizer. **Compliance?** _____

  Supply air temperature reset. **Compliance?** _____

  Outside air lockout. **Compliance?** _____

  Nighttime space temperature setup / setback. **Compliance?** _____ *(space heating setback to 55℉, cooling set up to 85℉)*

  Attach a log, generated for one month at one-hour intervals by the EMCS, with recorded values for date, time, outside air temperature (dry bulb and wet bulb), AHU fan status (supply and return), discharge air temperature, return air temperature (dry bulb and wet bulb), mixed air temperature (dry bulb and wet bulb), supply temperature (dry bulb and wet bulb), supply temperature setpoint and outside air damper position for all AHUs.

Functional Performance Test (FPT) Report

VFD – Fan Application

Project:_____ Date:_____

Air Handling Unit No.:_____

System:_____ Location:_____

Functional Performance Test: Performance Partner shall verify the operation of the variable frequency drive for control of a variable air volume system for compliance with the contract documents. As a minimum, the following items shall be tested and /or recorded:

1. **General Information**

   VFD manufacturer and model no. _____

   Supply Fan (SF) HP:_____ CFM: _____ RPM: _____ SP: _____

   Return Fan (RF) HP:_____ CFM: _____ RPM: _____ SP: _____

2. **Static Pressure Sensor/Transmitter**

   Verify location of the static pressure sensor in % of the distance from fan to terminal unit. (Normally, the sensor should be located 2/3 to 3/4 downstream of the fan to the terminal unit of the most restrictive branch)

   Distance _____%

3. **Pressure Reading Reliability**

   Duct diameter or equivalent diameter _____

   Nearest duct fitting upstream _____

   Nearest duct fitting downstream _____

   (Ideally, the most reliable readings occur when the sensor is at least 10 duct diameters downstream and 5 duct diameters upstream from takeoffs or fittings)

   Does the location comply? _____

4. **Functional Performance Test**

"Page content is subject to Confidentiality Restrictions"

a. Terminal Units Full Cooling (Boxes at Max)
Adjust all space temperature setpoints at least 10ºF below design setpoints. All zones should be in full cooling and terminal units should be open to the maximum position.

- Measure or read the duct static pressure and record in column A of Table 1.
- Read the frequency output of the VFDs and record in Table 1.

b. Terminal Units Intermediate Position (Boxes Partially Opened)
Readjust thermostats to a few degrees below normal setpoints, to simulate an approaching thermostat satisfaction and take readings.

- Measure or read the duct static pressure and record in column B of Table 1.
- Read the frequency output of the VFDs and record in Table 1.

c. Terminal Units Satisfied (Boxes at Min)
Readjust thermostats to actual room temperatures to simulate a satisfied condition. Boxes should close to the minimum position.

- Measure or read the duct static pressure and record in column C of Table 1.
- Read the frequency output of the VFDs and record in Table 1.

d. Verify Static Pressure Sensor/Transmitter
Using a magnehelic gauge, record actual static pressure at the location of the sensor and record static pressure indicated by the BMS

Actual Static Pressure _____

BMS Static Pressure _____

Is the variance less than 5%? _____ If no, investigate problem.

5. Test Data

Design Static Pressure (in.)_____

Design Frequency (Hz): SF _____ RF _____

Design RPM: SF _____ RF _____

SP Setpoint during test (in.) _____

Table 1.

Test Data	A Boxes at Max position		B Boxes Partially Open		C Boxes at Min position	
	SF	RF	SF	RF	SF	RF

VFD Frequency or RPM						
Static Pressure during Test						

6. Analysis

a. Compare the full open frequency or RPM to the design values for the supply fan. Divide the design value by the reading in Column A. If the percentage is less than 95%, all boxes may not have driven to the full open position. Investigate possible problems.

Is the variance less than 5%? _____

b. Is the static pressure recorded in Columns B & C within 10% of the setpoint?
Is the variance less than 5%? _____

c. The SP during the full open condition should be significantly less than the partially loaded conditions and close to the value calculated in Attachment A (within 0.15 inches). If not, investigate possible problems.

Compliance? _____

7. General Issues

a. Verify that power quality requirements from the specifications have been completed.

b. Record results and include in the Operation and Maintenance Manuals.

c. Certification and Witness

Performance Partner _____

Functional Performance Test (FPT) Report

VFD – Pump Application

Project:_____ Date:_____

Pump No.:_____

System:_____ Location:_____

Functional Performance Test: Performance Partner shall verify the operation of the variable frequency drive for control of a variable pumping system for compliance with the contract documents. As a minimum, the following items shall be tested and/or recorded:

1. **General Information**

   VFD manufacturer and model no. _____

   Pump HP:_____ GPM: _____ Head (ft): _____

2. **Differential Sensor/Transmitter**

   Verify location of the differential pressure sensor.

   (Ideally, the sensor should be located at or near the last branch takeoff)

   Location _____

3. **Functional Performance Test**

   a. Intermediate Flow – Valves Partially Opened
   It is expected to find the system in this condition.

   – Read the speed, DP at the sensor, and gpm in the loop, if available, and record in condition 3, in Table 1.

   b. Design Flow – Valves Full Open

   (maximum cooling or heating)

"Page content is subject to Confidentiality Restrictions"

- Set the space temperature setpoints 10ºF below the current space temperature for cooling valves and 10ºF above the space temperature for heating so that all valves modulate to the full open position.
- Read the speed, DP at the sensor, and gpm in the loop, if available, and record in condition 2, in Table 1.

c. Minimum Flow – Valves Shut
(minimum cooling or heating)

- Set the space temperature setpoints equal to the current space temperature so that all conditions are satisfied, driving all valves to the minimum or closed position.
- Read the speed, DP at the sensor, and gpm in the loop, if available, and record in condition 4, in Table 1.

4. Test Data

Design Differential Pressure (psig)_____

Design Frequency (Hz): _____

Design RPM: _____

DP Setpoint during test (psig) _____

(The operating setpoint shall be determined using the procedure listed in attachment A)

Table 1.

Condition	Pump No.	Speed (Hz or RPM)		DP at Sensor (psig)		Total Flow (GPM)
		Unit	Avg	Unit	Avg	
1. At design flow by TAB report	Pump - 1					
	Pump - 2					
	Pump - 3					
2. At design flow (during commissioning)	Pump - 1					
	Pump - 2					
	Pump - 3					
3. At intermediate	Pump - 1					

flow (during commissioning)	Pump - 2					
	Pump - 3					
4. At minimum flow (during commissioning)	Pump - 1					
	Pump - 2					
	Pump - 3					

5. Analysis

a. During operation of each pump combination, the average DP readings for all conditions should remain within 10% of each other. If not, investigate problems.

Is the variance less than 5%? _____

b. At no flow, Condition 4, is the flow and DP zero or equal to the minimum by-pass flows?

Compliance? _____

c. Is the system balanced to the lowest DP? **Compliance?** _____

6. General Issues

a. Verify that power quality requirements from the specifications have been completed.
Compliance? _____

b. Verify that there are no 3-way valves in the piping system that may negate the savings from the VFD by allowing flow to bypass the coils.
Complete? _____

c. Verify that the VFD control has been integrated into the BMS as specified.
Complete? _____

7. Record results and include in the Operation and Maintenance Manuals.

Functional Performance Test (FPT) Report

VFD – VAV Fan Application

Project:_____ Date: _____

Air Handling Unit No.:_____

System:_____ Location:_____

Functional Performance Test: Performance Partner shall verify the operation of the variable frequency drive for control of a variable air volume system for compliance with the contract documents. As a minimum, the following items shall be tested and /or recorded:

1. **General Information**

   VFD manufacturer and model no. _____

   Supply Fan (SF) HP:_____ CFM: _____ RPM: _____ SP: _____

   Return Fan (RF) HP:_____ CFM: _____ RPM: _____ SP: _____

2. **Static Pressure Sensor/Transmitter**

   a. Verify location of the static pressure sensor in % of the distance from fan to terminal unit. (Normally, the sensor should be located 2/3 to 3/4 downstream of the fan to the terminal unit of the most restrictive branch)

      Distance _____%

   b. Pressure Reading Reliability

      - Duct diameter or equivalent diameter _____
      - Nearest duct fitting upstream _____
      - Nearest duct fitting downstream _____
      - (Ideally, the most reliable readings occur when the sensor is at least 10 duct diameters downstream and 5 duct diameters upstream from takeoffs or fittings)
      - **Does the location comply?** _____

"Page content is subject to Confidentiality Restrictions"

3. Functional Performance Test

a. Terminal Units Full Cooling (Boxes at Max)
Adjust all space temperature setpoints at least 10ºF below design setpoints. All zones should be in full cooling and terminal units should be open to the maximum position.

- Measure or read the duct static pressure and record in column A of Table 1.
- Read the frequency output of the VFDs and record in Table 1.

b. Terminal Units Intermediate Position (Boxes Partially Opened)
Readjust thermostats to a few degrees below normal setpoints, to simulate an approaching thermostat satisfaction and take readings.

- Measure or read the duct static pressure and record in column B of Table 1.
- Read the frequency output of the VFDs and record in Table 1.

c. Terminal Units Satisfied (Boxes at Min)
Readjust thermostats to actual room temperatures to simulate a satisfied condition. Boxes should close to the minimum position.

- Measure or read the duct static pressure and record in column C of Table 1.
- Read the frequency output of the VFDs and record in Table 1.

d. Verify Static Pressure Sensor/Transmitter
Using a magnehelic gauge, record actual static pressure at the location of the sensor and record static pressure indicated by the BMS

Actual Static Pressure _____

BMS Static Pressure _____

Is the variance less than 5%? _____ If no, investigate problem.

4. Test Data

Design Static Pressure (in.)_____

Design Frequency (Hz): SF _____ RF _____

Design RPM: SF _____ RF _____

SP Setpoint during test (in.) _____

Table 1.

Test Data	**A** Boxes at Max position		**B** Boxes Partially Open		**C** Boxes at Min position	
	SF	RF	SF	RF	SF	RF
VFD Frequency or RPM						
Static Pressure during Test						

5. Analysis

a. Compare the full open frequency or RPM to the design values for the supply fan. Divide the design value by the reading in Column A. If the percentage is less than 95%, all boxes may not have driven to the full open position. Investigate possible problems.

Is the variance less than 5%? _____

b. Is the static pressure recorded in Columns B & C within 10% of the setpoint?
Is the variance less than 5%? _____

c. The SP during the full open condition should be significantly less than the partially loaded conditions and close to the value calculated in Attachment A (within 0.15 inches). If not, investigate possible problems.

Compliance? _____

6. General Issues

Verify that power quality requirements from the specifications have been completed.

7. Record results and include in the Operation and Maintenance Manuals.

8. Certification and Witness

Performance Partner _____

Client _____

Ameresco _____

Attachment A

To ensure that the energy savings are maximized, the system must be operated at the lowest static pressure (SP) possible. The objective is to find the lowest SP at the sensor that will allow full design flow at the terminal unit most difficult to satisfy (the duct run with the greatest pressure losses). The system minimum SP determined should be the setpoint for the VFD.

The procedure for finding the system minimum static pressure is as follows:

1. Manually or automatically set the temperature setpoints for all zones to 55 F, which should cause all units to open to the maximum position.
2. The airflow at each terminal unit should be measured and compared to the design flow.
3. The terminal unit receiving the lowest fraction of the design flow should be identified.
   (It should be the unit with the longest duct run, most fittings, etc.)
4. The SP at the controlling sensor should be noted.
5. A calculation should be made to determine the static pressure at the sensor that will allow the critical terminal unit to achieve its design flow.
   SP (setpoint) = SP (at the sensor from Step 4) X (1 / (fraction of flow from Step 3)^2)

It should be noted that if all terminal units were calling for full cooling simultaneously, the fan may not be able to achieve the SP setpoint calculated in Step 5 due to diversity allowances made by the design engineer.

Section 7:
Measurement & Verification Plan

Site Specific Plan

Ameresco has based its verification pricing on a short-term plan with certain instantaneous measurements performed at commissioning to ensure audit savings projections are met, and on-going monitoring over the project term to assist the City in operating at peak efficiency throughout the project term. This approach allows Ameresco to be a long-term partner of the City while minimizing the on-going cost of verification and thereby allowing significantly more capital improvements to be funded.

The above approach to verification minimizes the effect of inevitable changes at the facility, while still ensuring the City savings will be realized. Other verification approaches require adjustments for changes outside of the ESCO's control and can result in conflicts about the true magnitude of the adjustment. Our recommended approach preserves the ability to recognize savings while minimizing the long-term potential for conflicts.

ESM 1: Lighting System Improvements - Interior

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = LightingSavings - Heat + Cool$$

$$LightingSavings = DemandSavings + EnergySavings$$

$$DemandSavings = BaselineDemand - PostDemand$$

$$EnergySavings = BaselineEnergy - PostEnergy$$

$$BaselineDemand = \sum_{buildings}\sum_{fixtures}\left(kW_{Base} \times {\$}/{kW}\right)$$

$$PostDemand = \sum_{buildings}\sum_{fixtures}\left(kW_{retro} \times {\$}/{kW}\right)$$

$$BaselineEnergy = \sum_{buildings}\sum_{fixtures}\left(kW_{Base} \times Hrs_{Base(peak/offpeak)} \times {\$}/{kWh_{(peak/offpeak)}}\right)$$

$$PostEnergy = \sum_{buildings}\sum_{fixtures}\left(kW_{Retro} \times Hrs_{Base(peak/offpeak)} \times {\$}/{kWh_{(peak/offpeak)}}\right)$$

$$Heat = \sum_{buildings}\sum_{fixtures}\left(\frac{(kW_{Base} - kW_{Retro}) \times Hrs_{Base} \times \frac{Mths_{heat}}{12 months} \times 3{,}413\, {btu}/{kWh} \times Util}{Boiler_{Eff} \times 1{,}000{,}000\, {btu}/{mmbtu}} \times {\$}/{mmbtu}\right)$$

$$Cool = \sum_{buildings}\sum_{fixtures}\left(\frac{(kW_{Base} - kW_{Retro}) \times Hrs_{Base(peak/offpeak)} \times \frac{Mths_{cool}}{12 months} \times Util \times \text{Cool\%}}{Cool_{Eff}} \times {\$}/{kWh_{(peak/offpeak)}}\right)$$

Where:

kW_{Base} - Base fixture kW, as per lighting audit calculation included in the energy audit

kW_{Retro} - Retrofit fixture kW, as per lighting audit calculation included in the energy audit, subject to metering described below

Hrs_{Base} - Baseline fixture operating hours broken out into peak and offpeak, as per lighting audit calculation included in the energy audit

$Boiler_{Eff}$ - Average heating system efficiency, as per lighting audit calculation included in the energy audit

"Page content is subject to Confidentiality Restrictions"

$Cool_{Eff}$ - Average cooling system performance (COP), as per lighting audit calculation included in the energy audit

Util - Factor representing the amount of energy transmitted to the space, as per lighting audit calculation included in the energy audit

Cool% - Factor representing the amount space with cooling, as per calculation in the energy audit

$Mths_{heat}$ - Number of months the heating penalty will occur, as per lighting audit calculation included in the energy audit

$Mths_{cool}$ - Number of months the cooling benefit will occur, as per lighting audit calculation included in the energy audit

$/kW - Unit cost of electric demand, as per Unit Prices section

$/$kWh_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section

$/$kWh_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section

$/mmbtu - Unit cost of fossil fuel, as per Unit Prices section

Metering Plan

Ameresco will measure the post-installation fixture input power for a statistically significant sample size of the retrofit fixtures, and if the total sample values are within 3% of the energy audit values no change will be made. If the total sample values are not within 3%, Ameresco will either take corrective action for them to be within this limit, or will utilize the measured values. Post-retrofit light level measurements for a sample of areas will be provided to the City for reference.

Ameresco will use a calibrated hand held RMS meter (Fluke or equivalent) to measure power readings (kW, V, Amps, PF) from the lighting systems. These measurements can include individual fixtures or single lighting circuits with multiple fixtures of the same type and will continue until the sample size for each lighting group has been achieved. Fixtures to be metered must have at least 100 hours of operation following retrofit. Measurements shall be made only after the fixtures have reached steady state operating temperature and space temperatures are within normal occupied ranges.

The wattage measurements for each sample group will be averaged together. These averages will then be summed for all sample groups in order to determine the total measured wattage for the entire lighting sample. The difference between the total measured sample wattage and the total proposed wattage for the same sample will be subject to the 3% hurdle. If the difference is not within the 3% hurdle, the proposed wattage in the energy audit for the entire lighting project will be multiplied by the measured percentage difference and substituted into the energy audit calculation. The resulting savings will become the actual savings for this ESM. Interactive savings are stipulated and will not be part of the comparison.

"Page content is subject to Confidentiality Restrictions"

ESM 2: Lighting System Improvements - Exterior

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = EnergySavings$$

$$EnergySavings = BaselineEnergy - PostEnergy$$

$$BaselineEnergy = \sum_{buildings} \sum_{fixtures} \left(kW_{Base} \times Hrs_{Base(\,peak\,/\,offpeak)} \times \$/kWh_{(\,peak\,/\,offpeak)} \right)$$

$$PostEnergy = \sum_{buildings} \sum_{fixtures} \left(kW_{Retro} \times Hrs_{Base(\,peak\,/\,offpeak)} \times \$/kWh_{(\,peak\,/\,offpeak)} \right)$$

Where:

kW_{Base} - Base fixture kW, as per lighting audit calculation included in the energy audit

kW_{Retro} - Retrofit fixture kW, as per lighting audit calculation included in the energy audit, subject to metering described below

Hrs_{Base} - Baseline fixture operating hours broken out into peak and offpeak, as per lighting audit calculation included in the energy audit

$\$/kWh_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section

$\$/kWh_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section

Metering Plan

Ameresco will measure the post-installation fixture input power for a statistically significant sample size of the retrofit fixtures, and if the total sample values are within 3% of the energy audit values no change will be made. If the total sample values are not within 3%, Ameresco will either take corrective action for them to be within this limit, or will utilize the measured values. A "true-up" will be provided in spreadsheet format which will detail the measurement results and any savings guarantee adjustments.

Ameresco will use a calibrated hand held RMS meter (Fluke or equivalent) to measure power readings (kW, V, Amps, PF) from the lighting systems. These measurements can include individual fixtures or single lighting circuits with multiple fixtures of the same type and will continue until the sample size for each lighting group has been achieved. Fixtures to be metered must have at least 100 hours of operation following retrofit. Measurements shall be made only after the fixtures have reached steady state operating temperature.

The wattage measurements for each sample group will be averaged together. These averages will then be summed for all sample groups in order to determine the total measured wattage for the entire lighting sample. The difference between the total measured sample wattage and the total proposed wattage for the same sample will be subject to the 3% hurdle. If the difference is not within the 3% hurdle, the proposed wattage in the energy audit for the entire lighting project will be multiplied by the measured percentage

difference and substituted into the energy audit calculation. The resulting savings will become the actual savings for this ESM.

ESM 3: Lighting Controls

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = EnergySavings - Heat + Cool$$

$$EnergySavings = BaselineEnergy - PostEnergy$$

$$BaselineEnergy = \sum_{buildings}\sum_{fixtures}\left(kW_{Retro} \times Hrs_{Base(peak/offpeak)} \times {\$}/{kWh_{(peak/offpeak)}}\right)$$

$$PostEnergy = \sum_{buildings}\sum_{fixtures}\left(kW_{Retro} \times Hrs_{Retro(peak/offpeak)} \times {\$}/{kWh_{(peak/offpeak)}}\right)$$

$$Heat = \sum_{buildings}\sum_{fixtures}\left(\frac{kW_{Retro} \times \left(Hrs_{Base} - Hrs_{Retro}\right) \times \frac{Mths_{heat}}{12 months} \times 3{,}413\, {btu}/{kWh} \times Util}{Boiler_{Eff} \times 1{,}000{,}000\, {btu}/{mmbtu}} \times {\$}/{mmbtu}\right)$$

$$Cool = \sum_{buildings}\sum_{fixtures}\left(\frac{kW_{Retro} \times \left(Hrs_{Base(peak/offpeak)} - Hrs_{Retro(peak/offpeak)}\right) \times \frac{Mths_{cool}}{12 months} \times Util \times \text{Cool\%}}{Cool_{Eff}} \times {\$}/{kWh_{(peak/offpeak)}}\right)$$

Where:

kW_{Retro} - Retrofit fixture kW, as per lighting audit calculation included in the energy audit, subject to metering described below

Hrs_{Base} - Baseline fixture operating hours broken out into peak and offpeak, as per lighting audit calculation included in the energy audit

Hrs_{Retro} - Retrofit fixture operating hours broken out into peak and offpeak, as per lighting audit calculation included in the energy audit

$Boiler_{Eff}$ - Average heating system efficiency, as per lighting audit calculation included in the energy audit

$Cool_{Eff}$ - Average cooling system performance (COP), as per lighting audit calculation included in the energy audit

Util - Factor representing the amount of energy transmitted to the space, as per lighting audit calculation included in the energy audit

Cool% - Factor representing the amount space with cooling, as per calculation in the energy audit

$Mths_{heat}$	-	Number of months the heating penalty will occur, as per lighting audit calculation included in the energy audit
$Mths_{cool}$	-	Number of months the cooling benefit will occur, as per lighting audit calculation included in the energy audit
$/kW	-	Unit cost of electric demand, as per Unit Prices section
$/kWh$_{peak}$	-	Unit cost of peak electric energy, as per Unit Prices section
$/kWh$_{offpeak}$	-	Unit cost of offpeak electric energy, as per Unit Prices section
$/mmbtu	-	Unit cost of fossil fuel, as per Unit Prices section

Metering Plan

Ameresco will measure the post-installation fixture input power for a statistically significant sample size of the retrofit fixtures in ESM-1. The energy savings for lighting sensors connected to the ESM-1 samples will be compared to the energy audit using the metered input power. Hours of operation will remain per the energy audit. If the total sample values are within 3% of energy audit values no change will be made. If the total sample values are not within 3%, Ameresco will either take corrective action for them to be within this limit, or will utilize the measured values.

All measurements for this ESM will be from those completed for ESM-1. The lighting controls audit calculation will be update using the resulting ESM-1 lighting wattages per its M&V plan. Interactive savings are stipulated and will not be part of the comparison.

"Page content is subject to Confidentiality Restrictions"

ESM 4: Energy Management System Upgrade/Expansion

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Motors + Heating + Cooling$$

$$Motors = ElecBase - ElecPost$$

$$ElecBase = \sum_{buildings} \left(kW_{Base} \times Hrs_{Base(\,peak\,/\,offpeak\,)} \times {\$}/{kWh_{(\,peak\,/\,offpeak\,)}} \right)$$

$$ElecPost = \sum_{buildings} \left(kW_{Base} \times Hrs_{\mathrm{Re}\,tro(\,peak\,/\,offpeak\,)} \times {\$}/{kWh_{(\,peak\,/\,offpeak\,)}} \right)$$

$$Heating = HeatBase - HeatPost$$

$$HeatBase = \sum_{buildings} \left[\sum_{Bin}^{Heating} \left(\frac{Load_{OccBase} \times Hrs_{OccBase} + Load_{UnoccBase} \times Hrs_{UnoccBase}}{Eff \times 1{,}000\, {mbtu}/{mmbtu}} \right) \times {\$}/{mmbtu} \right]$$

$$HeatPost = \sum_{buildings} \left[\sum_{Bin}^{Heating} \left(\frac{Load_{Occ\,\mathrm{Re}\,tro} \times Hrs_{Occ\,\mathrm{Re}\,tro} + Load_{Unocc\,\mathrm{Re}\,tro} \times Hrs_{Unocc\,\mathrm{Re}\,tro}}{Eff \times 1{,}000\, {mbtu}/{mmbtu}} \right) \times {\$}/{mmbtu} \right]$$

$$Cooling = CoolBase - CoolPost$$

$$CoolBase = \sum_{buildings} \left[\sum_{Bin}^{Cooling} \left(\frac{Load_{OccBase} \times Hrs_{OccBase(\,peak\,/\,offpeak\,)} + Load_{UnoccBase} \times Hrs_{UnoccBase(\,peak\,/\,offpeak\,)}}{COP \times 3.413\, {mbtu}/{kWh}} \right) \times {\$}/{kWh_{(\,peak\,/\,offpeak\,)}} \right]$$

$$CoolPost = \sum_{buildings} \left[\sum_{Bin}^{Cooling} \left(\frac{Load_{Occ\,\mathrm{Re}\,tro} \times Hrs_{Occ\,\mathrm{Re}\,tro(\,peak\,/\,offpeak\,)} + Load_{Unocc\,\mathrm{Re}\,tro} \times Hrs_{Unocc\,\mathrm{Re}\,tro(\,peak\,/\,offpeak\,)}}{COP \times 3.413\, {mbtu}/{kWh}} \right) \times {\$}/{kWh_{(\,peak\,/\,offpeak\,)}} \right]$$

Where:

kW_{Base} - Total fan and pump motor kW under EMS control, as per calculation in the energy audit

Hrs_{Base} - Base motor operating hours broken out into peak and offpeak, as per calculation in the energy audit

Hrs_{Retro} - Retrofit motor operating hours broken out into peak and offpeak, as per calculation in the energy audit

"Page content is subject to Confidentiality Restrictions"

$Load_{OccBase}$ - Building load per bin, including infiltration load, (mbtu/hr) under current conditions during occupied hours, as per calculation in the energy audit

$Load_{UnoccBase}$ - Building load per bin, including infiltration load, (mbtu/hr) under current conditions during unoccupied hours, as per calculation in the energy audit

$Load_{OccRetro}$ - Building load per bin, including infiltration load, (mbtu/hr) with reduced setpoint temperature and improved control, as per calculation in the energy audit

$Load_{UnoccRetro}$ - Building load per bin, including infiltration load, (mbtu/hr) with night setback and improved control, as per calculation in the energy audit

$Hrs_{OccBase}$ - Baseline heating and cooling bin hours during occupied period broken out into peak and offpeak, as per calculation in the energy audit

$Hrs_{UnoccBase}$ - Baseline heating and cooling bin hours during unoccupied period broken out into peak and offpeak, as per calculation in the energy audit

$Hrs_{OccRetro}$ - Retrofit heating and cooling bin hours during occupied period broken out into peak and offpeak, as per calculation in the energy audit

$Hrs_{UnoccRetro}$ - Retrofit heating and cooling bin hours during unoccupied period broken out into peak and offpeak, as per calculation in the energy audit

Eff - Heating system efficiency, as per calculation in the energy audit

COP - Cooling system coefficient of performance, as per calculation included in the energy audit

$\$/kWh_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section

$\$/kWh_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section

$/mmbtu - Unit cost of fossil fuel, as per Unit Prices section

Metering Plan

Upon completion of the installation, Ameresco will commission the energy management system and test its functionality to ensure the ability of savings as specified in the energy audit to occur, as per the Commissioning Plan in Section 6. Monitoring of equipment operating hours and space temperatures will be completed in detail to verify the performance of the new EMS over at least 4 weather bins at time of commissioning, up to a maximum of 4 weeks. Performance of the new EMS shall be considered verified once all time schedules are shown to turn on and off controlled equipment per the programmed times and temperature setpoints, both occupied and unoccupied are substantially achieved. Additionally, the commissioning report for the EMS, completed during construction, will be attached to the first Annual Measurement and Verification report to confirm the EMS is commissioned per the designed intent. Trends will be setup to track operating hours and temperatures per the final commissioning plan developed during the design and construction phase.

"Page content is subject to Confidentiality Restrictions"

Occupied Scheduling

Ameresco will initially setup the occupancy schedules in the EMS to reflect the current occupancy of the buildings. The HVAC systems will only be operated when the buildings are supposed to be occupied. Other areas of the buildings like meeting rooms can have slightly longer schedules to reflect occupancy outside of the normal occupancy. The vacation schedule will also be initially setup in the system to turn off equipment on vacation days. The City will be responsible for updating the vacation and special days schedule to ensure the systems are not operating when the buildings are not occupied.

Building	Start time (Mon – Fri)	Stop time (Mon – Fri)	Weekends/ Holidays	Period
City Hall	8:00am	8:00pm	Off	Year-round
Police Court Bldg	24/7 Court Area (6am)	24/7 Court Area (11pm)	24/7 Off	Year-round Year-round
Malone Aquatic Center	24/7	24/7	24/7	Year-round
Beals Senior Center	8:00am	5:00pm	Off	Year-round
Main Library	8:30am	8:00pm	Sat 8:30am-5:00pm	Year-round
Manross Library	Mon-Thu 10:00am Fri – 9:00am	Mon-Thu 8:00pm Fri-5:00pm	Sat 9:00am-5:00pm	Year-round
Youth Services Building	8:30am	Mon/Wed/Fri 5:00pm Tue/Thu 8:00pm	Off	Year-round

Unoccupied Zone Temperature Reset

The following setpoints will initially be setup in the EMS.

Building	Occupied Set Point Heating (ºF)	Occupied Set Point Cooling (ºF)	Unoccupied Set Point Heating (ºF)	Unoccupied Set Point Cooling (ºF)
City Hall Annex Bldg	70.0	74.0	55.0	85.0 or off
Police Court	70.0	74.0	55.0	85.0 or off
Malone Aquatic Center	83.0	83.0	83.0	85.0 or off
Beals Senior Center	72.0	74.0	55.0	85.0 or off
Main Library	72.0	74.0	55.0	85.0 or off
Manross Library	70.0	74.0	55.0	85.0 or off
Youth Services Building	68.0	74.0	55.0	85.0 or off

"Page content is subject to Confidentiality Restrictions"

ESM 6: Demand Control Ventilation

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Electric + FossilFuel$$

$$Electric = ElecBase - Elec\,\mathrm{Re}\,tro$$

$$ElecBase = \sum_{Building}\sum_{Bin}\left(\frac{Load_{Base}\times Hrs_{BaseCoolPeak}\times 1{,}000\,{}^{btu}/_{mbtu}}{COP\times 3{,}413\,{}^{btu}/_{kWh}}\right)\times {}^{\$}/_{kWh_{Peak}}$$

$$+\sum_{Building}\sum_{Bin}\left(\frac{Load_{Base}\times Hrs_{BaseCoolOff-Peak}\times 1{,}000\,{}^{btu}/_{mbtu}}{COP\times 3{,}413\,{}^{btu}/_{kWh}}\right)\times {}^{\$}/_{kWh_{Off-Peak}}$$

$$Elec\,\mathrm{Re}\,tro = \sum_{Building}\sum_{Bin}\left(\frac{Load_{\mathrm{Re}\,tro}\times Hrs_{\mathrm{Re}\,troCoolPeak}\times 1{,}000\,{}^{btu}/_{mbtu}}{COP\times 3{,}413\,{}^{btu}/_{kWh}}\right)\times {}^{\$}/_{kWh_{Peak}}$$

$$+\sum_{Building}\sum_{Bin}\left(\frac{Load_{\mathrm{Re}\,tro}\times Hrs_{\mathrm{Re}\,troCoolOff-Peak}\times 1{,}000\,{}^{btu}/_{mbtu}}{COP\times 3{,}413\,{}^{btu}/_{kWh}}\right)\times {}^{\$}/_{kWh_{Off-Peak}}$$

$$FossilFuel = FuelBase - Fuel\,\mathrm{Re}\,tro$$

$$FuelBase = \sum_{Building}\sum_{Bin}\left(\frac{Load_{Base}\times Hrs_{BaseHeat}}{Eff\times 1{,}000\,{}^{mbtu}/_{mmbtu}}\right)\times {}^{\$}/_{mmbtu}$$

$$Fuel\,\mathrm{Re}\,tro = \sum_{Building}\sum_{Bin}\left(\frac{Load_{Post}\times Hrs_{\mathrm{Re}\,troHeat}}{Eff\times 1{,}000\,{}^{mbtu}/_{mmbtu}}\right)\times {}^{\$}/_{mmbtu}$$

Where:

$Load_{Base}$ - Building load {mbtu/hr} after EMS savings are accounted for, as per calculation in the energy audit

$Load_{Retro}$ - Building load {mbtu/hr} CO_2 control, as per calculation in the energy audit

$Hrs_{BaseHeat}$ - Base bin hours for each heating period, occ/unocc, as per calculation in the energy audit

$Hrs_{RetroHeat}$ - Retrofit bin hours for each heating period, occ/unocc, as per calculation in the energy audit

$Hrs_{BaseCool}$ - Base bin hours for each cooling period, occ/unocc, as per calculation in the energy audit

$Hrs_{RetroCool}$ - Retrofit bin hours for each cooling period, occ/unocc, as per calculation in the energy audit

"Page content is subject to Confidentiality Restrictions"

Eff - Average heating system efficiency, as per calculation in the energy audit
COP - Cooling system coefficient of performance, as per calculation included in the energy audit
$/kWh$_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section
$/kWh$_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section
$/mmbtu - Unit cost of fossil fuel, as per Unit Prices section below

Metering Plan

Upon completion of the installation, Ameresco will commission the CO_2 sensors and test their functionality to ensure the ability of savings as specified in the energy audit to occur. Monitoring of equipment operating hours and CO_2 will be completed to verify the performance of the new CO_2 sensors in conjunction with the EMS measurement and verification plan. Trends will be setup to track operating hours and CO_2 levels per the final commissioning plan developed during the design and construction phase.

No measurements will be taken for this ESM.

ESM 12: Variable Frequency Drives

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Baseline - PostInstallation$$

$$Baseline = \sum_{Building} \left(kW \times Hours_{(peak/offpeak)} \times {\$}/{kWh_{(peak/offpeak)}} \right)$$

$$Postinstallation = \sum_{Building} \left(Usage_{(peak/offpeak)} \times {\$}/{kWh_{(peak/offpeak)}} \right)$$

Where:

kW - Base motor kW, as per calculation in the energy audit

Hours - Run hours of each applicable motor broken out into peak and off peak, as per calculation in the energy audit

Usage - Energy usage of each motor with VFD control, broken out into peak and offpeak, as per calculation in the energy audit

$\$/kWh_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section

$\$/kWh_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section

Metering Plan

Ameresco will confirm performance of the variable frequency drives by trending fan or pump speed over the course of at least one representative 24-hour period (operation across at least three 5 degree F temperature BINs). Trending will be extended to longer than 24 contiguous hours if necessary to capture a three bin operating range. If the fan or pump speed modulates based upon system loading and is able to turn down below the speed referenced in the energy audit, no change will be made. The mildest temperature BIN measured, plus 10%, will be compared to the same temperature bin in the savings calculation. If the fan or pump does not modulate as predicted, Ameresco will either take corrective action and remeasure, or will recalculate the savings using measured performance data as inputs into the energy audit savings analysis.

ESM 13: Transformer Replacements

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Baseline - PostInstallation$$

$$Baseline = \sum_{transformer} \left(Usage_{Base_{(Peak/offPeak)}} \times \$/kWh_{(Peak/offPeak)} + kW_{Base} \times \$/kW \right)$$

$$PostInstallation = \sum_{transformer} \left(Usage_{Retro_{(Peak/offPeak)}} \times \$/kWh_{(Peak/offPeak)} + kW_{Retro} \times \$/kW \right)$$

Where:

kW_{Base} - Baseline transformer kW, as per calculation in the energy audit

kW_{Retro} - Retrofit transformer kW, as per calculation in the energy audit, subject to metering described below

$Usage_{Base}$ - Baseline energy usage for transformers, as per calculation in the energy audit, subject to metering described below

$Usage_{Post}$ - Retrofit energy usage for transformers, as per calculation in the energy audit, subject to metering described below

$/kW - Unit cost of electrical demand, as per Unit Prices section

$/kWh$_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section

$/kWh$_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section

Metering Plan

Ameresco will measure the input and output power for a statistically significant sample size of transformers after replacement, and if the total sample values are within 5% of the energy audit values no change will be made. If the total sample values are not within 5%, Ameresco will either take corrective action for them to be within this limit, or will utilize the measured values.

"Page content is subject to Confidentiality Restrictions"

ESM 14: Steam Trap Replacement

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Baseline - PostInstallation$$

$$Baseline = SteamLoss_{Base} \times {}^{\$}/_{mmbtu}$$

$$PostInstallation = SteamLoss_{Post} \times {}^{\$}/_{mmbtu}$$

Where:

$SteamLoss_{Base}$ - Base energy lost due to steam traps (mmbtu), as per calculation in energy audit

$SteamLoss_{Post}$ - Retrofit energy lost due to steam traps (mmbtu), as per calculation in energy audit

$/mmbtu - Unit cost of fossil fuel, as per Unit Prices section below

Metering Plan

No measurements will be taken for this ESM.

"Page content is subject to Confidentiality Restrictions"

ESM 15: Pipe & Jacket Insulation

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = \sum_{Heat}\left(Baseline_{Heat} - PostInstallation_{Heat}\right) + \sum_{Cool}\left(Baseline_{Cool} - PostInstallation_{Cool}\right)$$

$$Baseline_{Heat} = \sum_{Pipes}\left(\frac{LossRate_{Base} \times Hrs}{Eff \times 1000\,{}^{mbtu}/_{mmbtu}}\right) \times {}^{\$}/_{mmbtu}$$

$$PostInstallation_{Heat} = \sum_{Pipes}\left(\frac{LossRate_{Retro} \times Hrs}{Eff \times 1000\,{}^{mbtu}/_{mmbtu}}\right) \times {}^{\$}/_{mmbtu}$$

$$Baseline_{Cool} = \sum_{Pipes}\left(\frac{LossRate_{Base} \times Hrs}{COP} \times \frac{1{,}000\,{}^{btu}/_{mbtu}}{3{,}413\,{}^{btu}/_{kWh}}\right) \times {}^{\$}/_{kWh_{Peak}}$$

$$PostInstallation_{Heat} = \sum_{Pipes}\left(\frac{LossRate_{Retro} \times Hrs}{COP} \times \frac{1{,}000\,{}^{btu}/_{mbtu}}{3{,}413\,{}^{btu}/_{kWh}}\right) \times {}^{\$}/_{kWh_{Peak}}$$

Where:

$LossRate_{Base}$ - Existing pipe heat loss rate (mbtu/hr), as per calculation in energy audit
$LossRate_{Retro}$ - Proposed pipe heat loss rate (mbtu/hr), as per calculation in energy audit
Hrs - Total pipe run hours, as per calculation in energy audit
Eff - Base heating plant efficiency, as per calculation in energy audit
COP - Cooling system coefficient of performance, as per calculation included in energy audit
$/mmbtu - Unit cost of fossil fuel, as per Unit Prices section below
$/kWh$_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section

Metering Plan

No measurements will be taken for this ESM.

ESM 18: Windows Replacements

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Baseline - PostInstallation$$

$$Baseline = \sum_{Building}\left(\sum_{Bin}^{Heating}\left(\frac{Load_{BaseOcc}\times Hrs_{Occ(peak/offpeak)}+Load_{BaseUnocc}\times Hrs_{Unocc(peak/offpeak)}}{Eff\times 1{,}000\,{}^{mbtu}/_{mmbtu}}\right)\times {}^{\$}/_{mmbtu}+\sum_{Bin}^{Cooling}\left(\frac{Load_{BaseOcc}\times Hrs_{Occ(peak/offpeak)}+Load_{BaseUnocc}\times Hrs_{Unocc(peak/offpeak)}}{COP\times 3.413\,{}^{mbtu}/_{kWh}}\right)\times {}^{\$}/_{kWh_{(peak/offpeak)}}\right)$$

$$PostInstallation = \sum_{Building}\left(\sum_{Bin}^{Heating}\left(\frac{Load_{RetroOcc}\times Hrs_{Occ(peak/offpeak)}+Load_{RetroUnocc}\times Hrs_{Unocc(peak/offpeak)}}{Eff\times 1{,}000\,{}^{mbtu}/_{mmbtu}}\right)\times {}^{\$}/_{mmbtu}+\sum_{Bin}^{Cooling}\left(\frac{Load_{RetroOcc}\times Hrs_{Occ(peak/offpeak)}+Load_{RetroUnocc}\times Hrs_{Unocc(peak/offpeak)}}{COP\times 3.413\,{}^{mbtu}/_{kWh}}\right)\times {}^{\$}/_{kWh_{(peak/offpeak)}}\right)$$

$$Load_{Base/RetroOcc/Unocc} = \left(Trans_{Base/RetroOcc/Unocc} + Infil_{Base/RetroOcc/Unocc}\right)$$

Where:

Trans	-	The transmission load per bin (mbtu/hr) for either the base case or the retrofit case during either the occupied or unoccupied period, as per the calculation in the energy audit
Infil	-	The infiltration load per bin (mbtu/hr) for either the base case or the retrofit case during either the occupied or unoccupied period, as per the calculation in the energy audit
Hrs_{Occ}	-	Bin hours for occupied period broken out into peak and off peak, as per calculation in the energy audit
Hrs_{Unocc}	-	Bin hours for unoccupied period broken out into peak and off peak, as per calculation in the energy audit
Eff	-	Heating system efficiency, as per calculation in the energy audit
COP	-	Cooling system coefficient of performance, as per calculation included in the energy audit
$/mmbtu	-	Unit cost of fossil fuel, as per Unit Prices section below
$/kWh$_{peak}$	-	Unit cost of peak electric energy, as per Unit Prices section
$/kWh$_{offpeak}$	-	Unit cost of offpeak electric energy, as per Unit Prices section

Metering Plan

No measurements will be taken for this ESM.

ESM 21: Boiler Replacements

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Baseline - PostInstallation$$

$$Baseline = \frac{Usage_{Current} \times Eff_{Retro}}{Eff_{Base}} \times {}^{\$}/_{mmbtu_{Base}}$$

$$PostInstallation = Usage_{Current} \times {}^{\$}/_{mmbtu_{Post}}$$

Where:

Eff_{Base} - Base heating system efficiency, as per calculation in the energy audit

Eff_{Retro} - Retrofit heating system efficiency, as per calculation in the energy audit, subject to metering plan below

$Usage_{Current}$ - Actual metered fuel usage in mmbtu for new boilers, minimum of the proposed usage in the energy audit. Actual metered fuel usage for the affected boilers only shall be provided by the City or utility and must be from utility grade meters.

$\$/mmbtu_{Base}$ - Baseline unit cost of fossil fuel, as per Unit Prices section below

$\$/mmbtu_{Post}$ - Proposed unit cost of fossil fuel, as per Unit Prices section below

Metering Plan

As part of the commissioning process, the combustion efficiency of the newly installed boilers will be measured and compared to the expected values for the new boilers per the energy audit calculation. If the measurement is within 3% of the energy audit combustion efficiency values no change will be made. If the measurement value is not within 3%, Ameresco will either take corrective action for them to be within this limit, or will utilize the measured values. For condensing boilers these measurements will be taken over a range of return water temperatures during a period of not more than a week. For non-condensing boilers these measurements will be taken one time during a burner cycle, after steady state firing has been reached.

Ameresco will use a calibrated portable flue gas analyzer (Testo or equivalent) to measure combustion efficiency for each new boiler. Boilers will only be tested once they have reached steady state firing, which shall be defined as having continuously fired on high fire for at least 15 minutes and the return water temperature remains constant, plus or minus 2.5ºF, for 15 minutes. For steam boilers, the return water requirement is replaced with 15 minutes of continuous steam production as indicated by continuously rising or constant steam pressure greater than 1psi. Once steady state is reached, the operational boiler's combustion efficiency will be measured with at least two additional measurements taken at least 5 minutes apart with the boiler remaining in continuous high fire operation. Only one boiler shall be operated at a time in order to assist steady state operation. This process shall be repeated for each new boiler.

For non-condensing boilers, the above measurement procedure shall only need to be performed once. For condensing boilers, the above measurement procedure shall be repeated so as to perform measurements at

"Page content is subject to Confidentiality Restrictions"

multiple steady state return water temperatures between 100ºF and 140ºF. At least 3 return water states shall be measured with at least 5ºF between states.

The measurements for all new boilers associated with a single boiler plant will be averaged together to represent the measured combustion efficiency for each new boiler plant. The difference between the energy audit combustion

ESM 23: Steam to Hot Water Conversion

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Baseline - PostInstallation$$

$$Baseline = \frac{Usage_{Current} \times Eff_{Retro}}{Eff_{Base}} \times {}^{\$}/_{mmbtu\ Base}$$

$$PostInstallation = Usage_{Current} \times {}^{\$}/_{mmbtu\ Post}$$

Where:

Eff_{Base} - Base heating system efficiency, as per calculation in the energy audit

Eff_{Retro} - Retrofit heating system efficiency, as per calculation in the energy audit, subject to metering plan below

$Usage_{Current}$ - Actual metered fuel usage in mmbtu for new boilers, minimum of the proposed usage in the energy audit. Actual metered fuel usage for the affected boilers only shall be provided by the City or utility and must be from utility grade meters.

$\$/mmbtu_{Base}$ - Baseline unit cost of fossil fuel, as per Unit Prices section below

$\$/mmbtu_{Post}$ - Proposed unit cost of fossil fuel, as per Unit Prices section below

Metering Plan

As part of the commissioning process, the combustion efficiency of the newly installed boilers will be measured and compared to the expected values for the new boilers per the energy audit calculation. If the measurement is within 3% of the energy audit combustion efficiency values no change will be made. If the measurement value is not within 3%, Ameresco will either take corrective action for them to be within this limit, or will utilize the measured values. For condensing boilers these measurements will be taken over a range of return water temperatures during a period of not more than a week. For non-condensing boilers these measurements will be taken one time during a burner cycle, after steady state firing has been reached.

Ameresco will use a calibrated portable flue gas analyzer (Testo or equivalent) to measure combustion efficiency for each new boiler. Boilers will only be tested once they have reached steady state firing, which shall be defined as having continuously fired on high fire for at least 15 minutes and the return water temperature remains constant, plus or minus 2.5ºF, for 15 minutes. multiple steady state return water temperatures between 100ºF and 140ºF. At least 3 return water states shall be measured with at least 5ºF between states.

The measurements for all new boilers associated with a single boiler plant will be averaged together to represent the measured combustion efficiency for each new boiler plant. The difference between the energy audit boiler calculation efficiency and the measured combustion efficiency will be subject to the 3% hurdle.

ESM 26: Condensing Unit Replacement

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Demand + ElecBase - Elec\,\mathrm{Re}\,tro$$

$$Demand = \left(kW_{Base} - kW_{\mathrm{Re}\,tro}\right) \times Mths_{cool} \times {\$}/{kW}$$

$$ElecBase = \sum_{buildings}\left[\sum_{Bin}^{Cooling}\left(\frac{Load_{Occ} \times Hrs_{Occ(\,peak\,/\,offpeak\,)} + Load_{Unocc} \times Hrs_{Unocc(\,peak\,/\,offpeak\,)}}{COP_{Base} \times 3.413\,{mbtu}/{kWh}}\right) \times {\$}/{kWh_{(\,peak\,/\,offpeak\,)}}\right]$$

$$ElecPost = \sum_{buildings}\left[\sum_{Bin}^{Cooling}\left(\frac{Load_{Occ} \times Hrs_{Occ(\,peak\,/\,offpeak\,)} + Load_{Unocc} \times Hrs_{Unocc(\,peak\,/\,offpeak\,)}}{COP_{\mathrm{Re}\,tro} \times 3.413\,{mbtu}/{kWh}}\right) \times {\$}/{kWh_{(\,peak\,/\,offpeak\,)}}\right]$$

Where:

- kW_{Base} - Base average annual cooling kW, as per calculation in the energy audit
- kW_{Retro} - Retrofit average annual cooling kW, as per calculation in the energy audit
- $Mths_{cool}$ - Number of months cooling will occur, as per calculation in the energy audit
- $Load_{Occ}$ - Interacted building load per bin, (mbtu/hr) during occupied hours, as per calculation in the energy audit
- $Load_{Unocc}$ - Interacted building load per bin, (mbtu/hr) during unoccupied hours, as per calculation in the energy audit
- Hrs_{Occ} - Interacted cooling bin hours during occupied period broken out into peak and offpeak, as per calculation in the energy audit
- Hrs_{Unocc} - Interacted cooling bin hours during unoccupied period broken out into peak and offpeak, as per calculation in the energy audit
- COP_{Base} - Base cooling system coefficient of performance, as per calculation included in the energy audit
- COP_{Retro} - Retrofit cooling system coefficient of performance, as per calculation included in the energy audit
- $/kW - Unit cost of electric demand, as per Unit Prices section
- $/kWh_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section
- $/kWh_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section

Metering Plan

No measurements will be taken for this ESM.

ESM 27: AHU Replacement

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Heating + Cooling$$

$$Heating = HeatBase - HeatPost$$

$$HeatBase = \sum_{buildings}\left[\sum_{Bin}^{Heating}\left(\frac{Load_{OccBase}\times Hrs_{OccBase}+Load_{UnoccBase}\times Hrs_{UnoccBase}}{Eff\times 1{,}000\,{}^{mbtu}/_{mmbtu}}\right)\times {}^{\$}/_{mmbtu}\right]$$

$$HeatPost = \sum_{buildings}\left[\sum_{Bin}^{Heating}\left(\frac{Load_{Occ\,Retro}\times Hrs_{OccBase}+Load_{Unocc\,Retro}\times Hrs_{UnoccBase}}{Eff\times 1{,}000\,{}^{mbtu}/_{mmbtu}}\right)\times {}^{\$}/_{mmbtu}\right]$$

$$Cooling = CoolBase - CoolPost$$

$$CoolBase = \sum_{buildings}\left[\sum_{Bin}^{Cooling}\left(\frac{Load_{OccBase}\times Hrs_{OccBase}+Load_{UnoccBase}\times Hrs_{UnoccBase}}{COP\times 3.413\,{}^{mbtu}/_{kWh}}\right)\times {}^{\$}/_{kWh_{(peak\,/\,offpeak)}}\right]$$

$$CoolPost = \sum_{buildings}\left[\sum_{Bin}^{Cooling}\left(\frac{Load_{Occ\,Retro}\times Hrs_{OccBase}+Load_{Unocc\,Retro}\times Hrs_{UnoccBase}}{COP\times 3.413\,{}^{mbtu}/_{kWh}}\right)\times {}^{\$}/_{kWh_{(peak\,/\,offpeak)}}\right]$$

Where:

$Load_{OccBase}$ - Building load per bin, (mbtu/hr) under current conditions during occupied hours, as per calculation in the energy audit

$Load_{UnoccBase}$ - Building load per bin, (mbtu/hr) under current conditions during unoccupied hours, as per calculation in the energy audit

$Load_{OccRetro}$ - Building load per bin, (mbtu/hr) with new wall, as per calculation in the energy audit

$Load_{UnoccRetro}$ - Building load per bin, (mbtu/hr) with new wall, as per calculation in the energy audit

$Hrs_{OccBase}$ - Baseline heating and cooling bin hours during occupied period broken out into peak and offpeak, as per calculation in the energy audit

$Hrs_{UnoccBase}$ - Baseline heating and cooling bin hours during unoccupied period broken out into peak and offpeak, as per calculation in the energy audit

Eff - Heating system efficiency, as per calculation in the energy audit

"Page content is subject to Confidentiality Restrictions"

COP - Cooling system coefficient of performance, as per calculation included in the energy audit
$/kWh$_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section
$/kWh$_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section
$/mmbtu - Unit cost of fossil fuel, as per Unit Prices section

Metering Plan

No measurements will be taken for this ESM.

"Page content is subject to Confidentiality Restrictions"

ESM 28: Induction Unit Replacement

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Baseline - PostInstallation$$

$$Baseline = \sum_{Building} \left(Electric_{Base} \times \$/kWh_{peak} + Fuel_{Base} \times \$/mmbtu \right)$$

$$Postinstallation = \sum_{Building} \left(Electric_{Post} \times \$/kWh_{peak} + Fuel_{Post} \times \$/mmbtu \right)$$

Where:

$Electric_{Base}$ - Electric usage based on existing system, as per calculation in energy audit
$Electric_{Post}$ - Electric usage based on proposed system, as per calculation in energy audit
$Fuel_{Base}$ - Fossil fuel usage based on existing system, as per calculation in energy audit
$Fuel_{Post}$ - Fossil fuel usage based on proposed system, as per calculation in energy audit
$/mmbtu - Unit price of fossil fuel, as per the Unit Prices section
$/$kWh_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section

Metering Plan

No measurements will be taken for this ESM.

ESM 33: WPCP – Aeration Control Improvement

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Baseline - PostInstallation$$

$$Baseline = \sum_{Building} \left(Electric_{Base_{(peak\ /\ offpeak)}} \times {\$}/{kWh_{(peak\ /\ offpeak)}} \right)$$

$$Postinstallation = \sum_{Building} \left(Electric_{Post_{(peak\ /\ offpeak)}} \times {\$}/{kWh_{(peak\ /\ offpeak)}} \right)$$

Where:

$Electric_{Base}$ - Electric usage based on existing system, as per calculation in the energy audit

$Electric_{Post}$ - Electric usage based on proposed system, as per calculation in the energy audit

$/kW - Unit cost of electric demand, as per Unit Prices section

$/kWh$_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section

$/kWh$_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section

Metering Plan

No measurements will be taken for this ESM.

"Page content is subject to Confidentiality Restrictions"

ESM 34: WPCP – Install High Speed Turbo Blower

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = Baseline - PostInstallation$$

$$Baseline = \sum_{Building} \left(kW \times Hours_{(peak/offpeak)} \times {}^{\$}/_{kWh_{(peak/offpeak)}} \right)$$

$$Postinstallation = \sum_{Building} \left(Usage_{(peak/offpeak)} \times {}^{\$}/_{kWh_{(peak/offpeak)}} \right)$$

Where:

kW	-	Base motor kW, as per calculation in the energy audit
Hours	-	Run hours of applicable motor broken out into peak and off peak, as per calculation in the energy audit
Usage	-	Energy usage of motor with VFD control, broken out into peak and offpeak, as per calculation in the energy audit
$\$/kWh_{peak}$	-	Unit cost of peak electric energy, as per Unit Prices section
$\$/kWh_{offpeak}$	-	Unit cost of offpeak electric energy, as per Unit Prices section

Metering Plan

No measurements will be taken for this ESM.

"Page content is subject to Confidentiality Restrictions"

ESM 38: Street Lighting

Energy Savings Calculation Methodology

Savings Algorithm:

$$Savings = BaselineEnergy - PostEnergy$$

$$BaselineEnergy = \sum_{buildings} \sum_{fixtures} \left(kW_{Base} \times Hrs_{Base(\,peak\,/\,offpeak)} \times \$/kWh_{(\,peak\,/\,offpeak)} \right)$$

$$PostEnergy = \sum_{buildings} \sum_{fixtures} \left(kW_{Retro} \times Hrs_{Base(\,peak\,/\,offpeak)} \times \$/kWh_{(\,peak\,/\,offpeak)} \right)$$

Where:

kW_{Base} - Base fixture kW, as per lighting audit calculation included in the energy audit

kW_{Retro} - Retrofit fixture kW, as per lighting audit calculation included in the energy audit, subject to metering described below

Hrs_{Base} - Baseline fixture operating hours broken out into peak and offpeak, as per lighting audit calculation included in the energy audit

$\$/kWh_{peak}$ - Unit cost of peak electric energy, as per Unit Prices section

$\$/kWh_{offpeak}$ - Unit cost of offpeak electric energy, as per Unit Prices section

Metering Plan

No measurements will be taken for this ESM. Ameresco will inventory the post-installation fixtures and submit them to the utility in order to update the charges imposed by the utility and verify the City is properly billed. The inventory will be used to prove to the utility that the installed fixtures meet the applicable "bin" in the rate tariff.

"Page content is subject to Confidentiality Restrictions"

Measurement and Verification Report Services

ESM 1: Lighting System Improvements - Interior

Ameresco will perform a yearly site inspection of a sampling of the lighting systems to ensure that the lamp and ballast technologies that were installed are in operation and that future replacement lamps and ballasts are at least as efficient as the Ameresco installed technologies. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 2: Lighting System Improvements - Exterior

Ameresco will perform a yearly site inspection of a sampling of the lighting systems to ensure that the lamp and ballast technologies that were installed are in operation and that future replacement lamps and ballasts are at least as efficient as the Ameresco installed technologies. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 3: Lighting Controls

Ameresco will perform a yearly site inspection of a sampling of the lighting controls to ensure that the sensors are in place and operational. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 4: Integrated and New Energy Management Systems

Ameresco will inspect the energy management system both quarterly and annually, as part of its site inspection. A review of available trend data will be performed, and a visual inspection of major control areas will be completed. Observations identified during the site inspection shall be incorporated into the annual reconciliation report.

Annual Inspection Procedures (General)

- Confirm that the system/equipment is functional and operating as intended.
- Verify that the system is being properly maintained. Review current O&M practices to ensure compliance with the contract requirements.
- Review current or past problems with the system, especially those that may affect energy savings.
- Identify any building renovations or changes in the facility operation during the past year that would affect the project performance and/or savings.

Quarterly Inspection Procedures (EMS)

- Review trend logs and compare with the standards established in the ESA.
- Review the notification history for set-points and occupancy schedules that have been modified since the last inspection.
- Recommend set-point and schedule adjustments – particularly those that do not comply with the contract standards.

"Page content is subject to Confidentiality Restrictions"

- Review the basic system operation with new personnel and recommend training, if necessary.
- Review alarm history and discuss possible reasons and corrections.

ESM 6: Demand Control Ventilation

The ongoing monitoring for the new CO_2 sensors will be completed with ESM-4, only for sensors connected to a direct digital control system with trending capability.

ESM 12: Variable Frequency Drives

Ameresco will perform a yearly site inspection of the installed VFDs to ensure they are operational. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 13: Transformer Replacements

Ameresco will perform a yearly site inspection of a sampling of the transformers to ensure they are in operation and that future replacement transformers are at least as efficient as the Ameresco installed technologies. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 14: Steam Trap Measures

Ameresco will perform a yearly site inspection of a sampling of the installed steam traps to ensure they are in operation. If the steam systems are operational during the site visit, thermographic images will be taken to verify trap operation. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 15: Pipe & Equipment Insulation

Ameresco will perform a yearly site inspection of a sampling of the installed insulation to ensure it is installed. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 18: Window Replacements

Ameresco will perform a yearly site inspection of the installed windows to ensure they are functional and remain as installed. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 21: Boiler Replacements

Ameresco will perform a yearly site inspection of the new boilers and burners to verify they are operational. Ameresco will also inspect available maintenance logs to verify proper maintenance is occurring. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 23: Steam to Hot Water Conversion

Ameresco will perform a yearly site inspection of the new boilers and new heating coils to verify they are operational. Ameresco will also inspect available maintenance logs to verify proper maintenance is occurring. The observations during this inspection will be made part of the Annual Reconciliation Report.

"Page content is subject to Confidentiality Restrictions"

ESM 26: Condensing Unit Replacement

Ameresco will perform a yearly site inspection of the new condensing unit to verify it is operational. Ameresco will also inspect available maintenance logs to verify proper maintenance is occurring. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 27: AHU Replacement

Ameresco will perform a yearly site inspection of the air handling units to ensure they are operational. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 28: Induction Unit Replacement

Ameresco will perform a yearly site inspection of the new induction units to verify they are operational. Ameresco will also inspect available maintenance logs to verify proper maintenance is occurring. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 33: WPCP – Aeration Control Improvement

Ameresco will inspect the updated aeration control system annually, as part of its site inspection. A review of available trend data will be performed, and a visual inspection of major control areas will be completed. Observations identified during the site inspection shall be incorporated into the annual reconciliation report.

Annual Inspection Procedures (General)

- Confirm that the system/equipment is functional and operating as intended.
- Verify that the system is being properly maintained. Review current O&M practices to ensure compliance with the contract requirements.
- Review current or past problems with the system, especially those that may affect energy savings.
- Identify any building renovations or changes in the facility operation during the past year that would affect the project performance and/or savings.
- Review the basic system operation with new personnel and recommend training, if necessary.
- Review alarm history and discuss possible reasons and corrections.

ESM 34: WPCP – Install High Speed Turbo Blower

Ameresco will perform a yearly site inspection of the high speed turbo blower to ensure it is operational. Ameresco will also inspect available maintenance logs to verify proper maintenance is occurring. The observations during this inspection will be made part of the Annual Reconciliation Report.

ESM 38: Street Lighting

Ameresco will perform a yearly site inspection of a sampling of the lighting systems to ensure that the lamp and ballast technologies that were installed are in operation and that future replacement lamps and ballasts are at least as efficient as the Ameresco installed technologies. The observations during this inspection will be made part of the Annual Reconciliation Report.

"Page content is subject to Confidentiality Restrictions"

Operations and Maintenance Savings

$$AnnualSavings = \$MAINT/_{year} \times (1 + Esc)^{(CurrentYear - 2015)}$$

The maintenance savings breakdown per measure is as follows:

ESM	$MAINT/year
ESM 1: Lighting System Improvements - Interior	$31,391
ESM 2: Lighting System Improvements – Exterior	$380
ESM 21: Boiler Replacement	-$3,386
ESM 23: Steam to Hot Water Conversion	-$6,772
ESM 38: Street Lighting	$78,987
Totals	**$**100,600

ESM 1 & 2 O&M savings are based on reduced material replacements costs due to replacing old lamps and ballasts with new.

ESM 21 & 23 O&M savings are based on switching from oil to gas and the increased fixed gas costs that will be assessed by the utility.

ESM 38 O&M savings are based on switching from the utility owned tariff to the customer owned tariff.

The variable "Esc" equals 3.0% for the term of the project and is described in the Unit Prices section.

"Page content is subject to Confidentiality Restrictions"

Unit Prices Section

The following base unit prices are based on unit prices for the City, as provided for purposes of this project. These unit prices were utilized in calculating the financial savings associated with modified energy use.

Electricity Costs:

$$\$/_{kW} = Base_kW \times (1+Esc)^{(CurrentYear-2015)}$$

$$\$/_{kWh_{peak}} = Base_kWh_{peak} \times (1+Esc)^{(CurrentYear-2015)}$$

$$\$/_{kWh_{offpeak}} = Base_kWh_{offpeak} \times (1+Esc)^{(CurrentYear-2015)}$$

The base for each location is listed in the Utility Rate Table.

Fossil Fuel Costs:

$$\$/_{mmbtu_{gas}} = \frac{Base_gas}{100\, mbtu/_{Therm}} \times (1+Esc)^{(CurrentYear-2015)}$$

$$\$/_{mmbtu_{2oil}} = \frac{Base_oil}{138.7\, mbtu/_{Gal}} \times (1+Esc)^{(CurrentYear-2015)}$$

$$\$/_{mmbtu_{propane}} = \frac{Base_propane}{91.3\, mbtu/_{Gal}} \times (1+Esc)^{(CurrentYear-2015)}$$

The base for each location is listed in the Utility Rate Table.

Water Costs:

$$\$/_{kgal} = (Base_water + Base_sewer) \times (1+Esc)^{(CurrentYear-2015)}$$

The base for each location is listed in the Utility Rate Table.

Utility Escalation:

$$Esc = 3.0\%/_{yr}$$

For the purposes of the calculations set forth in this verification plan, the Parties stipulate that all Base Year utility rates and avoided maintenance cost savings shall be cumulatively escalated at three percent (3.0%) for each successive twelve (12) month period commencing with the first twelve (12) month period following the date of the energy audit. This escalation rate will be fixed for the full term of the project and applied annually to all energy unit prices.

Utility Rate Table:

The following table presents the floor utility rates to be used for calculating the energy cost savings, per building, associated with this project, unless modified by the tables following below. These utility rate tables are considered the floor rates. The rates used for calculating the annual energy cost savings will be the greater of the floor rates or the current rates in effect during the period covered by the Annual Reconciliation Report.

Facility	Electric Demand $/kW	Electric Peak $/kWh	Electric Off-Peak $/kWh	Natural Gas $/CCF	#2 Fuel Oil $/Gallon
Bristol Central High School	$16.34	$0.1825	$0.1511		$2.75
Bristol Eastern High School	$16.47	$0.1056	$0.1032	$0.5571	
Chippens Hill Middle School	$11.10	$0.1300	$0.1087	$0.5571	
Northeast Middle School	$19.02	$0.1043	$0.1043		$2.75
West Bristol K8 School	$16.47	$0.1056	$0.1032		
Green-Hills K8 School	$16.47	$0.1056	$0.1032		
Ellen P. Hubbell Elementary School	$19.02	$0.1043	$0.1043		$2.75
Stafford Elementary School	$ -	$0.1692	$0.1692		$2.75
Ivy Drive Elementary School	$ -	$0.1692	$0.1692	$0.5571	
Edgewood Elementary School	$19.02	$0.1043	$0.1043		$2.75
Mountain View Elementary School	$ -	$0.1692	$0.1692	$0.6264	
South Side Elementary School	$ -	$0.1692	$0.1692	$0.5571	
Board of Education Administration Building & Warehouse	$19.02	$0.1043	$0.1043	$0.6264	
City Hall & Annex	$11.10	$0.1106	$0.0893	$0.5953	$2.75
Water Main Office & Garage	$19.02	$0.0849	$0.0849		$2.75
Water Filtration Plant & High Service Pump Station	$11.10	$0.1106	$0.0893		$2.75
#1 Well House	$19.02	$0.0849	$0.0849		
#2 Well House	$8.26	$0.0845	$0.0845		
Chemical Control, Generator & #3-5 Well Houses	$8.26	$0.0845	$0.0845		
Chemical Control - Mechanic St	$ -	$0.1933	$0.1933		
Pump Control - Peck Lane	$19.02	$0.0849	$0.0849		
Pump Control & Generator - Hill St.	$19.02	$0.0849	$0.0849		$2.75
Pump and Control - Wolcott St	$19.02	$0.0849	$0.0849		
Police Court & Parking Garage	$11.10	$0.1106	$0.0893	$0.5831	$2.75
Rockwell Park & Pavilion	$19.02	$0.0849	$0.0849		$2.75
Muzzy Field	$15.54	$0.1139	$0.0900		
Ski Lodge	$19.02	$0.0849	$0.0849		
Page Park Pavilion	$19.02	$0.0849	$0.0849		$2.75
Recreation Building	$19.02	$0.0849	$0.0849		
Dennis Malone Aquatic Center	$19.02	$0.0849	$0.0849	$0.5571	
Fire Head Quarters	$19.02	$0.0849	$0.0849	$0.7001
