Preliminary Investment Grade Energy Audit

Presented by
Ameresco Inc.
111 Speen Street, Suite 410
Framingham, MA 01701
T: (508) 661.2200 • F: (508) 661.2201

This Audit contains data and information that has been submitted in response to a request for proposal or similar solicitation and is provided in confidence. The contents include proprietary information and trade secrets that belong to Ameresco, Inc., ("Confidential Information") and is disclosed to the recipient only for purposes of evaluation. In the event Ameresco is awarded a contract or purchase order as a result of or in connection with the submission of this Audit, Customer shall have a limited right as set forth in the governing contract or purchase order to disclose the data herein, but only to the extent expressly allowed. This restriction does not limit the Customer's right to use or disclose data obtained without restriction from any source, including the proposer.

Executive Summary

Ameresco is pleased to offer this Preliminary Investment Grade Energy Audit (IGEA) that was produced in close partnership with various City staff, technical advisors, and community volunteers. The following executive summary is intended to provide a high level overview on the results of the IGEA process and fundamentally describe the project to be constructed. Additional information and specific project details are contained within the individual sections of the IGEA.

The Preliminary Site Assessment entailed the survey of approximately 1,800,000 sqft of municipal facilities, inclusive of over eighty (80) facilities, traffic lights, parks, support buildings, and pump stations. Over $30M of energy savings measures (ESMs) are identified, evaluated, and presented herein for consideration. Moreover, the PSA chronicles thirty-eight (38) distinct potential energy savings measures across the facility portfolio with estimated energy consumption, implementation cost, energy savings, prescriptive rebate / incentives, and payback threshold values calculated for each individual activity chronicled.

The IGEA report was based on this larger audit and was narrowed following feedback and direction received by the City and their representatives. The IGEA chronicles the selected eighteen (18) desired ESMs and their associated details. The schematic scopes of work, the solicited sub-contractor costs, energy savings, and estimated utility incentives are all commensurate with the requirements of an IGEA. In addition, Ameresco provided a summary technical description of potential wholesale HVAC solutions for the Southside Elementary School as requested. This summary is provided as a stand-alone report for the City's consideration.

Ameresco, following the direction of City staff, developed a preliminary selection of comprehensive energy conservation measures and financial incentives that combined will fund over $12.6M of needed capital improvements and energy conservation measures.

The following table presents the costs and savings for the preliminarily selected scope. Please refer to Section 4 for details surrounding the financial variables related to this preliminarily selected scope. For details regarding the full scope of work developed for this IGEA, please refer to the tables included in Section 3. The detailed measure write-ups in Section 3 provide details about all ESMs that were developed for this IGEA.

ESM #	ESM Name	Annual kW	Total kWh	Natural Gas (CCF)	#2 Fuel Oil (Gallons)	Max Daily Demand (Natural Gas) (CCF (Demand))	Energy Savings	O&M Savings	Total Project Savings	Total Project Costs	SPB
1A	Lighting System Improvements - Interior - LED	7,665	1,600,577	(16,681)	(11,636)	-	$ 252,871	$ 31,391	$ 284,263	$ 3,415,928	12.02
2	Lighting System Improvements - Exterior	-	521,666	-	-	-	$ 60,386	$ 380	$ 60,765	$ 517,044	8.51
3A	Lighting Controls - LED	-	75,083	(1,471)	(152)	-	$ 8,501	$ -	$ 8,501	$ 92,395	10.87
4	Energy Management System Upgrade/Expansion	-	108,455	8,735	2,252	8	$ 20,844	$ -	$ 20,844	$ 586,097	28.12
6	Demand Control Ventilation	-	100,672	2,922	2,122	-	$ 22,045	$ -	$ 22,045	$ 104,142	4.72
12	Variable Frequency Drives	-	54,906	-	-	-	$ 5,834	$ -	$ 5,834	$ 40,724	6.98
13	Transformer Replacement	457	333,583	-	-	-	$ 44,465	$ -	$ 44,465	$ 594,173	13.36
14	Steam Trap Replacement	-	-	4,520	4,498	-	$ 14,887	$ -	$ 14,887	$ 358,582	24.09
15	Pipe & Jacket Insulation	-	-	5,540	1,301	-	$ 6,664	$ -	$ 6,664	$ 60,231	9.04

Notes:
1 This Proforma Cash Flow reflects an estimated financing rate of 2.85%. The actual rate will increase or decrease based on market conditions and customer credit rating at the time of funding.
2 Savings are based on current utility rate structures and usage information provided for purposes of this project.

Summary of Desired ESMs

ESM 1 – Interior Lighting System Improvements - This measure calls for replacing or upgrading 18,477 existing fixtures (Base T8 option), and 18,518 existing fixtures (LED T8 option) and will enhance the quality, consistency, and color rendering of the City's lighting system. Ameresco will standardize the lighting system where practical, reducing the number of different products the City must purchase, stock and maintain.

There are two options for interior lighting that the City can choose between.

- **The "Base" Option** provides for most fixtures replaced or retrofitted with 4' T8 lamps will receive Linear Fluorescent 28 watt T8 lamps and instant-start ballasts. This premium combination yields maximum energy savings without sacrificing light output or quality. These 28 watt T8 lamps consume less energy while matching the light output of standard T8's. The 28 watt T8 lamp also maintains light output better than T12 and typical T8 lamps. Fluorescent 28 watt T8 lamps offer 40,000 hour rated life with 5 year warranty.

- **The "LED T8" Option** provides for most fixtures replaced or retrofitted with 4' T8 lamps will receive LED T8 lamps and instant-start ballasts. This premium combination yields maximum energy savings without sacrificing light output or quality just like the fluorescent T8's. In addition, these LED T8 lamps offer longer rated lifetimes and an additional year of warranty when paired with new ballasts. LED T8 lamps offer 50,000 hour rated life with 6 year warranty.

Ballast outputs were tailored to deliver optimum light levels in each room. The new lighting system is designed to maintain lighting levels, while meeting IESNA standards in affected areas. All recommendations were made with the intent to optimize energy savings without compromising the quality and the level of light output.

Again, the project replaces or upgrades 18,477 existing fixtures (Base option), and 18,518 existing fixtures (LED T8 option). We consider two adjoining fixtures sharing a ballast to be a single fixture. This method provides a more precise assessment of energy consumption and material inventory, but sometimes results in a lower apparent fixture count.

ESM 2 – Exterior Lighting System Improvements - This measure calls for replacing or upgrading a total of 1,129 exterior lighting fixtures as described below:

- 365 existing fixtures shall be replaced with a new LED wall-pack;
- 154 existing fixtures will receive a customized LED conversion kit for recessed cans which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals;
- 151 existing fixtures shall be replaced with a new LED flood;
- 148 existing fixtures shall be replaced with a new LED shoebox;
- 123 existing fixtures will receive LED lamps and electronic ballasts;
- 82 existing fixtures shall be replaced with a new LED canopies;

"Page content is subject to Confidentiality Restrictions"

- 69 existing fixtures will receive screw-based LED lamps. They are highly efficient, and with lifetimes up to 50,000 hours, maintenance intervals are greatly extended;
- 25 existing fixtures shall be replaced with new LED drums;
- 10 existing fixtures will receive a customized LED conversion kit for exterior area fixtures which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals; and
- 2 existing fixtures shall be replaced with new vaportights.

ESM 3 – Lighting Controls - Project wide, Ameresco will install 1,399 local lighting controls employing a variety of strategies, each of which was customized to the unique space. We selected appropriate areas that contain several controllable fixtures, which have intermittent occupancy, and where a safety hazard will not be created if the sensor inadvertently turns the lights off. Applicable areas include classrooms, offices, baths, the cafeteria, and the library.

> Please Note: For the two lighting options presented in ESM 1, (the base option and the LED option), the proposed lighting controls scope will remain the same, however the energy savings would be slightly less with the LED option due to the LEDs using less power and therefore less wattage to control.

Bathrooms or other areas without direct line-of-sight to the sensor, will receive dual-technology sensors that "listen" for activity in addition to "looking" for motion.

The high-bays in gyms will have motion sensors, allowing each one to operate independently for maximum savings and flexibility. The photocell option can also prevent fixtures from operating when ample daylight is available, if desired.

For some mechanical spaces, programmable timers will be installed. Staff will simply push the button to receive a preset amount of time. They can see the time running as it counts down on the display. Before the time runs out, the lights will flash, indicating that the occupant has a few minutes before the timer automatically turns off the lights.

ESM 4 – Energy Management System Upgrade - Ameresco proposes to update the existing EMS systems installed in the City Hall, Police Court Building, Dennis Malone Aquatic Center, Beals Senior Center, Main Library, Manross Library, and Youth Services Building. Ameresco will also install new programmable thermostats at the City Hall Annex maintenance garage.

The proposed EMS would be "open protocol" and "interoperable" with other manufacturer's products. This feature would allow products from any vendor to be installed as the system is maintained or expanded in the future. The recommended EMS would be accessible from any Internet-enabled personal computer with web browsing software and would provide reduced energy consumption, increase system reliability and improve occupant comfort for the City. The proposed EMS will provide dynamic systems control and utility consumption reporting capabilities for the entire City.

"Page content is subject to Confidentiality Restrictions"

Under the proposed EMS, Ameresco would install a new open protocol TridiumAX based EMS and new Direct Digital Control (DDC) actuators that would replace existing pneumatic controls for the air handling units and other control valves, as well as exhaust fans and circulator pumps. All existing pneumatic controls will be removed at the City Hall, Police Court building and Manross Library.

Ameresco will provide all software and licenses to the City so they have complete ownership of the software and hardware. This will empower the City to shop around operation and maintenance of the new system as well as expansion of the system in the future. The proposed Tridium system makes this possible. Ameresco proposes to network the new EMS using the School's and City's existing wide-area networks (WAN). New control system interface equipment will be connected to the existing communications infrastructure. An Internet interface built into the new EMS will allow an authorized and authenticated operator to access EMS information through standard web browser software from any computer connected to the WAN.

This measure will generate energy savings by enabling more sophisticated and aggressive energy management strategies to be used in the spaces served, including night setback, optimal start-stop, static pressure reset, and improved zone control. Due to lack of effective night setback strategies, the energy savings for this measure will be substantial. The DDC system upgrade will also incorporate several new control strategies which, when incorporated into the new, more robust, control system, will yield much greater energy savings and operational improvements. Some of these strategies include Demand Controlled Ventilation (DCV), chilled water reset, Variable Air Volume (VAV) system static pressure reset, modulating outdoor air dampers for morning warm-up and cool-down modes, and boiler sequencing controls.

ESM 6 – Demand Control Ventilation - Ameresco identified energy saving opportunities in a number of the School and City buildings through the installation of demand control ventilation (DCV) controls. DCV controls modulate the amount of outdoor air supplied to a space to maintain a required ventilation rate (CFM/person) based on the actual occupancy at that time. This strategy saves energy by reducing the amount of outdoor air that is conditioned during low occupancy periods. The sixteen (16) AHU's identified for this measure are listed in the table below. New CO2 sensors will be installed in the appropriate return air ductwork for each unit. All outdoor air damper actuators will be tested for proper operation (modulating). New CO2 sensors will monitor CO2 levels in the spaces and control ventilation rates for each occupied space according to ASHRAE Standard 62 requirements. The sensors will be wired back to existing AHU controllers. The existing controls will be modified and programmed to control the outdoor air dampers via CO2 levels. The new sensors will have the capability to override the outdoor air dampers based on a CO2 control algorithm. New variable frequency drives (VFDs) will be installed on a number of supply and exhaust fans. The new VFDs will provide electrical energy savings and permit ventilation flowrates to be varied based on the occupancy and control set points.

Ameresco proposes to reduce ventilation flow rates during periods of low occupancy. Flowrate overrides will occur as needed to maintain zone temperature set points. The system will be controlled by the EMS.

ESM 12 – Variable Frequency Drives - Ameresco proposes to install variable frequency drives for the existing fan motors serving AHU-1 at the City Hall and the two (2) space heating pumps serving the Chippens Middle School. The VFDs will be integrated to the new EMS system. The installation

"Page content is subject to Confidentiality Restrictions"

of VFDs and controls will allow for modulating with varying load more efficiently than the existing methods of control, which will reduce electrical energy and improve system efficiency.

ESM 13 – High Efficiency Transformers - Ameresco proposes to replace a number of existing step-down transformers with new energy-efficient transformers at the Central High School, Eastern High School, City Hall, Police Court, Main Library, City Yard and Water Pollution Control Park. All of the transformers are dry-type indoor transformers that step-down 480 volt power to 208Y/120 volt power. Ameresco proposes to replace these transformers with new premium efficiency units that will reduce the electric losses and lower the cooling load of some of the equipment rooms.

ESM 14 – Steam Trap Replacement - Ameresco proposes to replace steam traps at the Central High School and Eastern High School. The proposed replacement and/or repair of steam traps will improve the overall steam use and heating system efficiencies. Steam distribution is accomplished at low pressure with thermal energy wasted due to failing traps. Properly functioning steam traps pass air and drain condensate formed in the steam distribution system and prevent live steam from exiting. This measure will address approximately 588 existing steam traps, and the improvement will result in energy and maintenance cost savings for the City.

It is proposed that all existing orifice style traps at the two High schools be replaced with thermostatic traps.

Ameresco did not observe any major issues that would merit a significant allowance for piping repair. A small budget was included to make repairs to pipe and/or valves within twelve (12) inches of the steam traps. Major repairs to the existing steam and condensate piping are excluded from the scope.

Excluded from the scope of work is any asbestos abatement and repair of existing steam/condensate piping. Based on visual inspections, asbestos surrounding the steam traps was not present.

During construction a complete steam trap survey will be conducted including testing of each trap at Eastern High School to be eligible for the 50% incentive offered by Eversource. Central High School is heated by oil so there would not be an incentive from Eversource.

ESM 15 – Pipe & Jacket Insulation - Ameresco proposes to install a combined total of approximately 1,204 linear feet of insulation as detailed in the tables above. The proposed insulation will be a fibrous glass type with a factory applied fire retardant vapor barrier jacket. The insulation will have a K-factor of at least 0.27 at 75°F mean temperature. Typical manufacturers include Owens-Corning, Certain Teed, Manville or Knauf. Heating system efficiency will improve as less heat is lost to the unoccupied and unconditioned mechanical spaces.

ESM 18 – Window Replacements - Ameresco proposes to replace the existing single-glazed windows at City Hall. The windows at City Hall have aluminum frames that are not thermally broken. The windows identified in this measure have poor insulating properties and add to occupant discomfort in

"Page content is subject to Confidentiality Restrictions"

addition to the building heating and cooling loads. Ameresco will replace these windows with new, double-glazed units having aluminum frames with thermal breaks, low-E coatings, and argon fill. The colors will match the existing design and will improve comfort as well as save heating and cooling energy.

ESM 21 – Boiler Replacements - Ameresco proposes to replace the oil-fired hot water boiler serving the Fire Headquarters with a new high efficiency gas-fired equivalent boiler. Ameresco proposes as an option for the Police Court Building to replace the existing oil-fired steam boilers with new gas-fired equivalent steam boilers. A new natural gas service will be provided by Eversource to serve the new boilers. As part of the measure, the existing underground oil tanks will be removed along with all other fuel oil auxiliaries. The proposed measure will provide the buildings with higher efficiency systems as well as a less expensive fuel source for space heating and domestic hot water.

During the preliminary energy audit Ameresco identified additional boiler replacement measures which were not selected by the City.

ESM 23 – Steam to Hot Water Conversion - Ameresco proposes to convert the heating systems serving the City Hall and Police Court building from steam to hot water. At City Hall, the existing Columbia boilers will be converted from oil-fired boilers producing steam to gas-fired boilers producing hot water. The steam heating coils serving the existing air handling units will be replaced with hot water coils, sized to provide the same heating capacity. In addition the existing electric hot water storage heater providing domestic hot water (DHW) to City Hall will be replaced with a new gas-fired high efficiency storage heater.

The existing oil-fired steam boilers at the Police Court building will be replaced with new high-efficiency gas-fired hot water boilers. The steam heating coils serving the existing air handling units will be replaced with hot water coils, sized to provide the same heating capacity. New natural gas service will be provided by Eversource to serve the new boilers. As part of this measure, the existing underground oil tank at the Police Court will be removed along with all other fuel oil auxiliaries.

This measure will generate energy savings by enabling the Police Court building to utilize higher efficiency hot water boilers. Condensing hot water boilers can achieve up to 99% thermal efficiency compared to about 82% for newer Steam boilers. There will also be savings at the City Hall and Police Court by reducing distribution losses since steam boilers operate at a higher temperature and are more susceptible to heat loss. Failed steam traps are also a cause of system inefficiency. Steam is allowed to blow by failed traps and can unintentionally be distributed through condensate return lines causing overheating and occupant discomfort.

The proposed measure will provide the building with a higher efficiency system as well as a less expensive fuel source for space heating and domestic hot water.

ESM 26 – Condensing Unit Replacement - Ameresco proposes to replace the existing outdoor condensing unit serving the Manross Library with a new condensing unit. The unit is nearing the end

"Page content is subject to Confidentiality Restrictions"

of its useful life, and numerous service and repairs have been made to maintain the unit. The new unit will help improve reliability and alleviate expensive repairs as well as improving efficiency.

ESM 27 – AHU Replacement - Ameresco proposes to replace the two (2) existing air handling units (AHU's) serving Manross Library. These upgrades will provide new reliable equipment that will save energy and lower operating and maintenance costs. The existing units will be removed and replaced with new units sized to match the existing. The new units will be tied into the new EMS, which will eliminate the existing pneumatic controls. The controls along with new dampers and valve controls will be able to more accurately control discharge temperatures, which will increase occupant comfort and provide energy savings.

ESM 28 – Induction Unit Replacement – Ameresco proposes to replace the existing perimeter induction air terminal units at City Hall with new units equivalent in size and style. As part of the replacement, Ameresco will install new DDC dual temperature control valves on each unit that will be tied into the proposed energy management system. Replacing the existing induction units with new ones will help improve space temperature control, and will add to the reliability of the system and decrease maintenance requirements for the City.

While the energy savings from this measure are minimal and are not sufficient to warrant the measure by itself, combining it with the savings from other measures, allows for the inclusion of the installation of new induction units in the project. Installing new induction units under a performance contract releases capital improvement funds for other projects throughout the City.

ESM 28A – Induction Unit Refurbishment – As an alternate to ESM 28, Ameresco proposes to refurbish the majority of existing perimeter induction air terminal units at City Hall and replace twenty (20) of the worst shape units with new units equivalent in size and style. As part of the Refurbishment, Ameresco will replace each enclosure with new enclosures and install new DDC dual temperature control valves on each unit that will be tied into the proposed energy management system. Refurbishing the existing induction units as opposed to replacing all of them will improve each unit's functionality while costing less than a full replacement of all 195 units.

ESM 33 – WPCP Aeration Tank Blower Control Improvement - Ameresco proposes to improve the existing aeration control system at the Water Pollution Control Park by updating the existing aeration control software and switching the system from manual control to automatic control. The new system will provide better control of the dissolved oxygen (DO) levels in the tanks, reducing the required motor amperage from the air blowers, saving energy. Specifically, Ameresco proposes to upgrade the Bristol WPCP aeration control system. The existing Automation Direct PLC, I/O modules and OPTO-22 I/O modules will be replaced with Allen-Bradley CompactLogix PLC or approved equal and I/O module hardware. The new PLC and I/O will be installed into the existing control panel. SCADA program modifications will be implemented (existing GE iFix). The new control system will be set for automatic DO control, adjusting each tanks valves based on DO levels of 2.2 ± 0.2ppm.

"Page content is subject to Confidentiality Restrictions"

ESM 34 – WPCP - Install High Speed Turbo Blower - Ameresco proposes to replace one (1) 350 HP blower serving the aeration tanks at the Water Pollution Control Park (WPCP) with a new High Speed Turbo Blower (HSTB). The new blower will not only replace an old blower near the end of its useful life, but will provide a much more efficient and reliable unit.

ESM 38 – Street Lighting - Ameresco has developed a Street Lighting system to benefit the residents of Bristol, CT. This ESM replaces or upgrades 5,535 exterior fixtures and will enhance the quality of the City's street lighting. During design and implementation we will work with public safety officials and other stakeholders to verify appropriate wattages for critical areas.

We believe the new LED system will provide improved visibility when compared to the existing streetlight system. However, compliance with any recommended practice, standard, or code is neither assumed nor guaranteed.

These LED fixtures include the "field adjustable option" which allows for customization to local field conditions. Existing streetlight infrastructure is rarely uniform- therefore the ability to increase or decrease light output as needed during installation is a valuable benefit, ensuring a successful project. For example, during installation many customers decide that, due to the improved visual perception of a "white" light source, even lower wattage settings are possible and desirable.

The recommended LED systems will operate in the color temperature range of 4000K which will produce a white light as opposed to the existing HPS systems that produce a yellow colored light. The vast majority of people agree that "white" light improves visibility and aesthetics compared to "yellow" light. Additionally, the fixtures will include a good quality photocell. Though slightly more expensive than other photocells, we seek to avoid premature failures which cause street lights to operate during the daytime.

"Page content is subject to Confidentiality Restrictions"

Section 1: Baseline

Overview

Ameresco performed a Preliminary Investment Grade Energy Audit (IGEA) for the City of Bristol, Connecticut. The buildings are comprised of schools, fire stations, a police court building, libraries, public works buildings, Senior Center, Youth Services building, Animal shelter, Pump Stations, Water Pollution Control Park, and Parks buildings, and Aquatic Center.

Prior to the IGEA, Ameresco performed a Preliminary Site Assessment (PSA) for the City of Bristol on over eighty (60) facilities throughout the City, including thirteen (13) school buildings, fifteen (15) City run facilities, Water Department buildings, and seven (7) Parks sites. Ameresco also audited a number of water and sewer pump stations and reviewed the City's street lighting. The total area of building space audited was approximately 1,888,621 square feet based on the City's provided Sq.ft. Estimates, or 1,839,617 based on Ameresco's total calculated areas. After review of the facilities with City personnel, the list was narrowed down removing Memorial Blvd School, the Recreation Building, and the Community Services Building, from the list of sites to include in the IGEA phase. The area of building space included in the IGEA phase is approximately 1,745,705 square feet.

As part of the IGEA, Ameresco developed a baseline model for each facility. The baseline developed for each building is based on the average of fiscal years 2014 and 2015 (FY14-FY15) utility data for electricity, natural gas, and #2 oil. Each of the fiscal years were weather adjusted to correlate to TMY3 (typical meteorological year) weather data for Hartford CT prior to averaging the two. The total baseline utility usage is approximately 20,730,818 kWh of electricity, 430,983 CCF of natural gas, and 281,111 gallons of #2 oil. The average total utility cost for this time period was approximately $4,344,389.

The baseline utility cost shown in the proforma located in Section 4 is based on current utility rates and does not include customer charges. Further, many of the tariffs the buildings receive natural gas under include block rate structures. These structures charge different rates depending on how much is used. Ameresco is only including rates that reflect blocks that will be affected by the Energy Saving Measures (ESMs). These rates are shown in Section 7 in the Utility Rate Table. The baseline utility cost shown in the proforma located in Section 4 is the product of the baseline utility energy units multiplied by the utility rates shown in Section 7.

"Page content is subject to Confidentiality Restrictions"

Table 1 gives the square footage for each facility analyzed, along with the energy performance of each building, in terms of fossil fuel and electricity usage per square foot. Energy performance is the ratio of yearly energy use by square footage and is a good indicator of how well a building performs. The energy performance of each of the municipal and school buildings was calculated from the utility information provided by City personnel and directly from the utility companies.

The total mbtu/gsf represents the total energy usage for the entire facility on a square foot basis. The total energy usage for the entire facility on a square foot basis is the addition of both electrical and fossil fuel performance (mbtu/gsf) if applicable. In the buildings evaluated the primary source for space heating is either natural gas or #2 oil. Electric heating is used at a few locations like pump stations. Electric cooling is utilized to varying degree in most municipal and school buildings, either via central chillers, packaged rooftop units or local space coolers.

Table 1: List of Audited Buildings and Energy Performance

Facility Name	Calculated Gross Square Feet (g.s.f)	Fuel MBTU / g.s.f.	Electric kWh / g.s.f.	Total EUI MBTU / g.s.f.

Pool	6,200	35	6.8	58
Totals	**1,745,705**			

Using information from the energy performance table along with investigating the existing conditions of equipment and systems, Ameresco has identified several key opportunities to reduce utility costs for each facility. Many of those savings opportunities have been captured in the ESMs and are detailed in Section 3.

Baseline Information

The baseline utility data for this Preliminary Investment Grade Energy Audit is based on the Fiscal 2014 and Fiscal 2015 energy data (July 2013 through June 2015). Annual heating degree days (HDD) for fiscal 2014 and 2015 were 2% and 6% greater than the thirty year average, respectively, which required weather adjustments in order to match 30-year average weather conditions for Bristol, Connecticut. The two adjusted fiscal years were averaged together for the established baseline. For annual energy usage see the table at the end of this section.

Utilities are supplied through a number of different providers. At present, Eversource provides delivery services while Constellation, Liberty Power, TransCanada, and Eversource provide commodity (supply) for electricity. Natural Gas is delivered and supplied by Eversource.

Table 2: Annual Energy Use by Facility

Facility Name	Natural Gas (CCF)	#2 Fuel Oil (Gallons)	Energy Consumption (kWh)
Bristol Central High School	4,091	79,341	1,082,160

***** Electric bill for Green-Hills School is manually billed each month by Eversource and is not published online. Ameresco has not yet received the usage from these manual bills from Eversource.
** Bathhouse utility account info was not supplied to Ameresco, so data could not be acquired.

Each ESM presented in this audit was explicitly "baselined" by a "temperature bin" analysis for temperature variant loads and by a fixed baseline for constant loads. Straightforward electrical saving ESMs such as lighting retrofits and motor replacements were analyzed by a combination of known operating hours, field measurements and engineering calculations. The baseline operating hours for each location or a portion thereof was determined from information from the City and review of metered data acquired during the IGEA. Energy cost savings for each ESM was calculated with the energy rates outlined in this section.

Electricity

The energy savings analyses for proposed retrofits use the following electric rate schedules to calculate dollar savings. Buildings listed under rates R30-School, R37-School, R40-School, R41 and R56-School currently receive electric supply from Constellation Energy Services at a rate of $0.0953/kWh. Buildings listed under rate R30-EVER currently receive electric supply from Eversource at a rate of $0.12139/kWh. Buildings listed under rates R30-Lib, R37-Lib, R56-Lib receive electric supply from Liberty Power at a rate of $0.07587/kWh. Eversource electricity delivery is charged to the City according to ten delivery rates. Electric rates are displayed in Table 3.

Table 3: Electric Rates (including supply and delivery)

Electricity Charges	On-Peak (kWh)	Off-Peak (kWh)	Electric Demand (kW)
Rate 001	$0.19328	$0.19328	-
R-27 (Muzzy Field)	$0.0381	$0.0142	$15.54
R30-Small General (School)	$0.1043	$0.1043	$19.02
R30-Small General (Lib)	$0.0849	$0.0849	$19.02
R30-Small General (EVER)	$0.1304	$0.1304	$19.02
35-Intermediate General Service	$0.0845	$0.0845	$8.26
37-Intermediate Time-Of-Day General (School)	$0.1300	$0.1087	$11.10
37-Intermediate Time-Of-Day General (Lib)	$0.1106	$0.0893	$11.10
40-Small Church and School (School)	$0.1692	$0.1692	-
41-Large Church and School	$0.1825	$0.1511	$16.34
56-Intermediate Time-Of-Day (School)	$0.1056	$0.1032	$16.47
56-Intermediate Time-Of-Day (Lib)	$0.0861	$0.0838	$16.47
Rate 116 – Street Lighting	$0.10068	$0.10068	-
Rate 117 – Street Lighting	$0.10054	$0.10054	-

Natural Gas

The energy savings analyses for proposed retrofits use the following natural gas rate schedules to calculate dollar savings. The City receives gas supply service from Eversource at commercial adjustable rates. We calculated these rates using known monthly published commercial adjustable rates from the most recent 12 months, and averaging these rates based on a HDD profile. The resulting supply rates are as follows:

- Small Service Supply Rate - $0.5908/CCF.
- Medium Service Supply Rate - $0.5498/CCF.
- Large Service Supply Rate - $0.5019/CCF.

"Page content is subject to Confidentiality Restrictions"

Eversource delivery rates utilize a usage block rate structure where over a monthly usage threshold of 200 CCF for small service, 1,000 CCF for medium service, and 2,500 CCF for large service, the rate is reduced. Ameresco assumed all of the savings would occur in the reduced rate threshold each month.

For the three sites where oil-to-gas conversions are proposed, the 'new service' rate was applied (R20E, R30E). A blended rate was calculated for each site based on an estimated monthly usage using a HDD profile.

Table 5 displays the total (supply & delivery) natural gas rates used for $ savings, and Table 6 displays the rates applied to each site.

Table 5: Gas Rates (includes Supply and Delivery)

Natural Gas Charges	Total ($/CCF)
R10 – Small General Service	$0.8423
R20 – Medium General Service	$0.6264
R30 – Large General Service	$0.5571
R20E – Medium General Service	$0.7001
R30E - CH – Large General Service	$0.5953
R30E – Pol - Large General Service	$0.5831

Fuel Oil

#2 fuel oil is delivered by East River Energy. For calculation purposes, the cost per gallon of $2.75 was used, which was calculated based on the average $/gallon for #2 oil of the most recent year for the Hartford CT area.

End-Use Breakdown

A baseline model was developed for each audited building. Fiscal year 2014 and 2015 utility data as previously described was used to calibrate the model(s). The energy end-use breakdown for natural gas, #2 oil and electricity was calculated from inventoried equipment ratings, local bin weather data, operational characteristics obtained from personnel, and building envelope characteristics. Where equipment data could not be obtained, engineering experience and judgment was used. The major fuel heating end-uses found in the municipal and school buildings audited includes space heating, (which consist of mechanical ventilation, conduction, and infiltration), domestic hot water usage, and cooking. Electrical usage includes lighting, space cooling, HVAC fan/pumps, kitchen equipment, and office equipment. The remaining energy was placed in the category of "miscellaneous loads" and includes other plug loads.

Section 2:
Existing Conditions

Bristol Central High School

Building

The Bristol Central High School building is a three-story brick building located at 480 Wolcott Street. The 217,027 sq. ft. building consists of classrooms, gymnasium, auditorium, library, cafeteria, and offices. Building envelope features include aluminum frame windows and doors with single pane glazing and a rubber roof with loose gravel top coat.

Building Occupancy

The Central High School building is primarily occupied Monday through Friday from 7:35 a.m. to 2:00 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot, indirect/direct pendant fixtures with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 26- and 32-Watt compact fluorescents, 500-Watt dimmable incandescent cans in the auditorium, T5 high-bays in the gym, T5 "biax" indirects, and a small number of strip fixtures in display cases with T12 lamps and magnetic ballasts. Exterior lighting consists of a variety of building-mounted or pole fixtures with high-pressure sodium or compact fluorescent lamps. The interior lights are typically in use weekdays 6:00 a.m. to 10:00 p.m. to allow for maintenance services and extracurricular activities.

HVAC

The classrooms are provided with heating, cooling and ventilation by five (5) GovernAir Model RSA-HWL-T make-up air units, MAU-1 through MAU-5, located on the rooftop. Each unit is equipped with steam coils, DX cooling coil, heat recovery wheel and supply and return fan motors ranging from 15 to 30 HP on VFDs. The MAUs operate in occupied mode from Mon. - Fri., 5:15 a.m. to 4:00 p.m. and in unoccupied mode at all other times.

MQuay AHU's serve the Auditorium (AC-1) with 15HP fan, Lecture Hall (AC-2) with 7.5HP fan, Cafeteria (AC-3) with 10HP fan, Media Center (AHU-1) with 10HP fan and VFD, and Offices (AHU-2) with 20HP fan and VFD. Heating & Ventilation units (HVs) serve various areas such as the Chorus Rm, Band Rm,

"Page content is subject to Confidentiality Restrictions"

Shops, Garage, Lobby, Varsity Locker, Boiler Rm, Cafeteria, Locker Rms, and the Gym (HV-12 thru HV-15). These units have fan motors ranging from 1.5HP to 7.5HP.

The majority of AHUs operate in occupied mode from Mon. - Fri., 6:00 a.m. to 3:00 p.m. and in unoccupied mode at all other times.

The Gym operates in occupied mode from Mon. - Fri., 6:00 a.m. to 7:00 p.m., Sunday 7:30 a.m. – 7:00 p.m. and in unoccupied mode at all other times.

Boiler

Three space heating boilers provide around 7 lbs of low pressure steam to the building. The two primary boilers used are HB Smith Series 28A-18, rated at 4,629 MBH output each, with dual fuel burners currently only using Oil. One Cleaver Brooks CR655-200 steam boiler with 8,375 MBH input installed in 1966 is used as back-up. Domestic Hot Water is provided by two (2) Duramax gas-fired atmospheric boilers each with 840 MBH input, serving a 350 gallon A.O. Smith indirect storage tank.

Cooling

Cooling is provided to the MAU's serving the classrooms by five (5) Trane RAUCC DX condensing units (CU1A-CU5A) totaling 220 tons. Cooling for AHU-1,2 and AC-1,2 is provided by four (4) McQuay ALP condensing untis (CU1-CU-4) which serve the Media Center, Admin, Auditorium, and Lecture Hall totaling 136 tons. Additional small condensing units on the roof serve the server rooms and media rooms.

Bristol Eastern High School

Building

The Bristol Eastern High School building is a two-story brick and block building located in Bristol, Connecticut. The building contains 210,403 sq. ft. of usable space and consists of classrooms, gymnasium, auditorium, library, cafeteria, and offices.

Building Occupancy

The Eastern High School building is occupied Monday through Friday from 7:35 a.m. to 2:00 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot, indirect/direct pendant fixtures with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 18- and 26-Watt compact fluorescents, dimmable incandescent cans in the auditorium, T5 high-bays in the gym, and T5 "biax" indirect/direct fixtures. Exterior lighting consists of a variety of building-mounted or pole fixtures with high-pressure sodium, compact fluorescent or incandescent lamps. The interior lights are typically in use weekdays 6:00 a.m. to 10:00 p.m. to allow for maintenance services and extracurricular.

"Page content is subject to Confidentiality Restrictions"

HVAC

The classrooms are provided with heating, cooling and ventilation by six (6) GovernAir Model RSA-HWL-T make-up air units, MAU-1 through MAU-6, located on the rooftop. Each unit is equipped with steam coils, DX cooling coil, heat recovery wheel and supply and return fan motors ranging from 15 to 25 HP on VFDs. The MAUs are scheduled to operate in occupied mode at different times Mon. - Fri., ranging from 5:30 a.m. start, 9:00 am start to 2:00 p.m. or 3:00 p.m. and in unoccupied mode at all other times.

MQuay RTU's serve the Admin/Media Center (RTU-1) with 10HP fan, Blue House Area (RTU-2) with 5HP fan,Grey House Area (RTU-3) with 3HP fan, Section G (RTU-4) with 1.5HP fan. Ten (10) AHU's serve areas such as the Small gym, locker rooms, and offices. Heating & Ventilation units (HVs) serve various areas such as the old gym, locker rooms, wrestling room, music room, cafeteria, band room, halls, and rifle range (HV-1 thru HV-9). These units have fan motors ranging from 0.75 HP to 3HP.

The majority of AHUs operate in occupied mode from Mon. - Fri., 9:00 a.m. to 2:30 p.m. and in unoccupied mode at all other times.

The Gym operates in occupied mode from Mon. - Fri., 7:30 a.m. to 6:00 p.m., and on weekends 9:00 a.m. – 2:00 p.m. and in unoccupied mode at all other times.

Boiler

Two space heating boilers provide low pressure steam to the building. The two primary boilers used are Smith Mills 400A cast iron sectional, rated at 5,093 MBH output each, with dual fuel burners currently using gas. Domestic Hot Water is produced by an indirect system consisting of the space heating boilers and a A.O. Smith custom model HWG350 indirect storage tank.

Cooling

Cooling is provided to the MAU's serving the classrooms by six (6) Trane RAUCC DX condensing units (CU1A-CU6A) totaling 220 tons. Cooling for RTU-1,2 3, and 4 is provided by four (4) McQuay ALP condensing untis (CU1-CU-4) which serve the Media, Admin, Blue House, Grey House, and Section G, totaling 36 tons. Additional small condensing units on the roof serve the special Ed Wing, server rooms and media rooms.

"Page content is subject to Confidentiality Restrictions"

Chippens Hill Middle School

Building

The Chippens Hill Middle School is a three-story masonry block and brick building constructed in 1993. The 166,855 sq. ft. building contains a library, gymnasium, auditorium, cafeteria, offices and classrooms. The flat rubber roof has a top layer of loose gravel and supports a number of HVAC equipment. There are fixed and awning style windows throughout with double glazing in aluminum frames.

Building Occupancy

The Chippens Hill Middle School building in Bristol is occupied on Monday from 8:15 a.m. to 5:20 p.m., Tuesday through Thursday 8:15 a.m. to 4:50 p.m. and Friday from 8:15 a.m. to 5:05 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot, indirect/direct pendant fixtures with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 18- and 26-Watt compact fluorescents, dimmable incandescent cans in the auditorium, and T5 high-bays in the gym. Exterior lighting consists of a variety of building-mounted or pole fixtures with metal halide, compact fluorescent or standard linear T8 lamps. The interior lights are typically in use weekdays 7:30 a.m. to 10:00 p.m. to allow for maintenance services and extracurricular activities.

HVAC

The majority of the building is provided with heating, cooling and ventilation by rooftop units RTU-1 through RTU-10 serving the Library, Computer Rm A-215, Computer Rm A-216, Faculty Lounge, Cafeteria, Gym A, Gym B, Gym C, Administration, and Auditorium Stage, respectively. These units are equipped with gas heaters, single-stage DX cooling coils and economizers, with supply fans in the range of 5 HP to 10 HP. AHU-1, 2 and 3 serve the Auditorium area and are equipped with hot water coils, two-stage DX cooling coils, economizers and 5 HP supply fans. MAU-1 through 5 provide heating and ventilation to Tech Ed 105, Tech Ed 108, Tech Ed 111, Rm C233 and Rm C239, respectively. These units have gas heaters and 1 HP supply fans. There are approximately 34 fractional HP rooftop exhaust fans that provide exhaust to most of the building. Much of the rooftop equipment is 20 years old or greater and showing signs of deterioration. None of the equipment appears to be controlled with VFDs. Most MAUs, RTUs and AHUs are interlocked with their respective exhaust fans and all cycle between occupied/unoccupied modes according to BMS schedules.

Perimeter classrooms and offices are provided with supplementary heat by hot water convectors. Common areas and some interior spaces are heated and ventilated by ceiling mounted hot water fan coil units.

"Page content is subject to Confidentiality Restrictions"

Boiler

Heating hot water is generated by two H.B. Smith Series 28A-16 dual-fuel boilers, each with an input capacity of 5,189 MBH. Two 20 HP pumps distribute heating hot water throughout the building to the radiation loop and terminal units. The motors have efficiencies of 92.4% and are constant speed, constant volume.

Cooling

The majority of the building is cooled by rooftop units RTU-1 through RTU-10 serving the Library, Computer Rm A-215, Computer Rm A-216, Faculty Lounge, Cafeteria, Gym A, Gym B, Gym C, Administration, and Auditorium Stage, respectively. These packaged rooftop units are equipped with single-stage DX cooling coils and air-cooled condensers and have a combined cooling capacity of approximately 50 tons.

Northeast Middle School

Building

The Northeast Middle School building is a two-story brick building constructed in 1961. The building contains 72,731 sq. ft. of usable space consisting of a gym, café, library, classrooms and offices. The roof is flat with a rubber membrane and top layer of loose gravel. The hopper and awning style windows throughout are single pane in metal frames and are in worn condition.

Building Occupancy

The Northeast Middle School building in Bristol is occupied Monday through Friday from 8:15 a.m. to 2:50 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot wrap fixtures with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 13- and 26-Watt compact fluorescents and T5 high-bays in the gym. Exterior lighting consists of a variety of building-mounted or pole fixtures with high-pressure sodium, metal halide or compact fluorescent lamps. The interior lights are typically in use weekdays 6:30 a.m. to 10:00 p.m. to allow for maintenance services and extracurricular activities.

HVAC

The building is provided with very little outdoor air ventilation. Two ceiling-hung HV units provide heating and ventilation to the gym. The units have 1 HP constant speed supply fans, hot water coils and outdoor air dampers. A similar indoor unit, AHU-2, serves the cafeteria. Perimeter spaces are heated by hot water

"Page content is subject to Confidentiality Restrictions"

convectors located along outside walls. A few interior rooms are heated with hot water unit heaters. There are approximately 34 exhaust fans that provide general exhaust throughout the building.

Boiler

Heating hot water is generated by two H.B. Smith 28A-13 oil-fired boilers, each with an input capacity of 1,036 MBH. Main pumps P-1 and P-2, each 15 HP, distribute the heating hot water to the radiation loop. They have constant speed motors with efficiencies of 93%. A small 2 HP pump, P-3, distributed heating hot water to the gym units. The boilers and pumps operate based on Tork time clocks that cycle the equipment between occupied and unoccupied modes. Terminal unit valves and dampers are all pneumatically controlled and communicate with pneumatic thermostats.

Cooling

The administration offices are cooled by a 3-ton AC unit consisting of a roof mounted condensing unit and ceiling-hung fan coil unit. The IT sever room is cooled by a Sanyo split-system. 5 window air conditioners provide cooling to the library and a few classrooms.

West Bristol K8 School

Building

The West Bristol K8 School is one of two newly constructed K8 School buildings that opened in 2012. The brick and masonry block building is made up of two-story north and west wings and a three story south wing. The building contains 124,678 sq. ft. of usable space which includes a library, gymnasium, cafeteria, classrooms, offices, and large atrium lobby. Building architectural features include a multi-color plate panel system, exterior sun shades on south facing windows, a white membrane roof and over 200 rooftop solar modules.

Building Occupancy

The building is occupied Monday through Friday from 7:30 a.m. to 5:30 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot, indirect/direct pendant fixtures with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 26- and 8x42-Watt compact fluorescents (gym), T5 biax fixtures for the cafeteria and metal halide up lights in the library and main lobby. Exterior lighting consists of a variety of building-mounted or pole fixtures with LED lamps. The interior lights are typically in use weekdays 6:00 a.m. to 9:00 p.m. to allow for maintenance services and extracurricular activities.

"Page content is subject to Confidentiality Restrictions"

HVAC

The majority of the classroom and office areas of the building are provided with heating and cooling by Mitsubishi Electric City Multi variable refrigerant volume heat pumps. Ventilation is provided to these areas by 4 rooftop DOAS units that feed an overhead VAV system. These units are equipped with energy recovery wheels that transfer energy from the exhaust air stream to the outdoor air supply stream. Additional heat is provided to classrooms by an underfloor radiant heating system. The remaining large areas including the café, auditorium, and gym are provided with heating, cooling and ventilation by AHU-1 and rooftop units RTU-1 through 4, all equipped with energy recovery wheels and DX heating/cooling coils. MAU-1 serving the mechanical room is the only gas-fired unit in the building.

Boiler

The building is provided with heated water by 4 ClimateMaster geothermal heat pumps that operate in place of a traditional boiler. Each unit has a heating capacity of 238 MBH. Hot water is distributed by two 5 HP pumps equipped with VFDs to the underfloor radiation loops.

Cooling

100% of the building is cooled, either by water-source DX cooling coils in the rooftop equipment or Mitsubishi heat pumps. Condenser water is distributed through the building loop to the terminal unit condensers by two 20 HP pumps equipped with VFDs and then returned to the ground water loop.

Green-Hills K8 School

Building

The Green-Hills K8 School is one of two newly constructed K8 School buildings that opened in 2012. The 134,056 sq. ft. school has 2 story sections that house the K-5 grade classrooms, offices, gym, cafeteria, and media center and a three story section consisting of 6-8 grade classrooms. The building has architectural wall panels and aluminum sun shades on south facing windows. The flat roof is covered in a white membrane and supports over 230 rooftop solar modules.

Building Occupancy

The Green-Hills K8 School building in Bristol is occupied from 8:15 a.m. to 4:20 p.m. on Mondays and Wednesdays and from 8:15 a.m. to 2:50 p.m. on Tuesdays, Thursdays and Fridays, with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot, indirect/direct pendant fixtures with standard, 32-Watt T8 lamps and electronic ballasts and T5 fixtures. Additional lighting includes 2x26-Watt (cafeteria) and 8x42-Watt compact fluorescents (gym). Exterior lighting consists of a variety of building-mounted or pole fixtures with LED lamps. The interior lights are typically in use weekdays 6:00 a.m. to 9:00 p.m. to allow for maintenance services and extracurricular activities.

"Page content is subject to Confidentiality Restrictions"

HVAC

The majority of the classroom and office areas of the building are provided with heating and cooling by LG Multi V variable refrigerant volume heat pumps. Ventilation is provided to these areas by 4 ERV units that feed an overhead VAV system. These units are equipped with energy recovery wheels that transfer energy from the exhaust air stream to the outdoor air supply stream. Additional heat is provided to classrooms by an underfloor radiant heating system. The cafeteria and gym are provided with heating, cooling and ventilation by AHU-1 and 2 respectively, each equipped with energy recovery wheels and DX heating/cooling coils. MAU-1 serving the mechanical room is the only gas-fired unit in the building.

Boiler

The building is provided with heated water by 4 ClimateMaster geothermal heat pumps that operate in place of a traditional boiler. Each unit has a heating capacity of 253 MBH. Hot water is distributed by two 5 HP pumps equipped with VFDs to the underfloor radiation loops.

Cooling

100% of the building is cooled, either by water-source DX cooling coils in the AHUs or LG heat pumps. Condenser water is distributed through the building loop to the terminal unit condensers by two 7.5 HP pumps equipped with VFDs and then returned to the ground water loop.

Ellen P. Hubbell Elementary School

Building

The Ellen P. Hubbell Elementary School building is a one-story brick and block building constructed in 1950. The building contains 60,070 sq. ft. of usable space consisting of a gym, café, library, classrooms and offices. Windows throughout the building are double glazing in aluminum frames and appear to be in good condition. The roof is flat with a rubber membrane covered in loose gravel.

Building Occupancy

The Ellen P. Hubbell Elementary School building in Bristol is occupied Monday through Friday from 9:05 a.m. to 3:25 p.m. with occasional use on weekends.

Lighting

Ellen P. Hubbell Elementary School: Interior lighting consists primarily of 2-lamp, 4-foot, wraps and troffers with standard, 32-Watt T8 lamps and electronic ballasts and T5 biax troffers. Additional lighting includes 13-Watt compact fluorescents, T5 high-bays in the gym. Exterior lighting consists of a variety of building-mounted or pole fixtures with high-pressure sodium or metal halide lamps. The interior lights are typically in use weekdays 6:00 a.m. to 9:00 p.m. to allow for maintenance services and extracurricular activities.

"Page content is subject to Confidentiality Restrictions"

HVAC

Indoor units AHU-1, 2 and 3 provide heating and ventilation to the media center, library and cafeteria and are equipped with hot water coils. Perimeter spaces are heated by hot water convectors located along exterior walls. Hot water cabinet unit heaters provide heat to common areas like corridors. 19 rooftop exhaust fans provide general exhaust to the building.

Boiler

Heating hot water is generated by two H.B. Smith 440 Mills boilers with input capacities of 2,499 MBH each. Each is equipped with an oil-fired Carlin burner. Heating hot water is distributed by two pairs of pumps. P-1 and P-2 are 3 HP each and serve the original building radiation loop. P-3 and P-4 are 7.5 HP and serve the east wing radiation loop. All pumps are constant volume. The hot water supply temperature is controlled by a pneumatic three-way mixing valve located in the boiler room. Terminal unit hot water valves are pneumatically controlled and communicate with a variety of Johnson Controls pneumatic thermostats.

Cooling

Indoor fan coil units AC-1 and AC-2 provide cooling and ventilation to the main office and faculty room. These units are equipped with DX cooling coils and electric reheat coils and are tied to rooftop air-cooled condensing units.

Stafford Elementary School

Building

The Stafford Elementary School building was constructed in 1950 of masonry blocks and a brick. The building contains 56,076 sq. ft. of usable space. The first floor consists of the library, gym, offices and classrooms while the basement level houses the cafeteria and additional classes. The hopper and fixed windows throughout are about 30 years old and have double pane glazing in aluminum frames. Doors are metal panels with various percentages of double pane glazing. Weather stripping on both the doors and operable windows are in poor condition.

Building Occupancy

The Stafford Elementary School building in Bristol is occupied Monday through Friday from 9:05 a.m. to 3:25 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot, valances, troffers, and wraps with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 9- and 13-Watt compact fluorescents and T5 high-bays in the gym. Exterior lighting consists of a variety of building-mounted fixtures with metal halide, high-pressure sodium, or incandescent quartz lamps or LED's. The interior lights are typically in use weekdays 6:00 a.m. to 9:00 p.m. to allow for maintenance services and extracurricular activities.

"Page content is subject to Confidentiality Restrictions"

HVAC

There is no outdoor air ventilation provided to the building. A number of rooftop exhaust fans provide general and restroom exhaust.

Boiler

The building is provided with low pressure steam by 2 H.B. Smith 3500 Mills cast iron boilers, each with an output capacity of 3,140 MBH. Both are equipped with Carlin 1150FFD oil-fired burners. Steam is distributed throughout the building in a two-pipe system to terminal units including cabinet unit heaters and convectors. Cabinet unit heaters have local TRV controls while convectors are equipped with pneumatic 2-way valves controlled by pneumatic thermostats. The steam system operates based on day and night pressure settings controlled by an Intermatic time clock.

Cooling

Only a small percentage of the building is cooled. The office area is cooled by a 5 ton Trane split-system that provides conditioned air through an overhead diffusers. There are 10 window air conditioners that provide cooling to a number of classrooms throughout the building.

Ivy Drive Elementary School

Building

The Ivy Drive Elementary School building is a one-story brick and block building constructed in 1966. The 60,914 sq. ft. building contains classrooms, offices, a multi-purpose room, cafeteria, and media center. The building was renovated about 5 years ago with new double pane aluminum framed windows and insulated panel doors. A north and a south courtyard provide daylight to interior classrooms.

Building Occupancy

The Ivy Drive Elementary building in Bristol is occupied Monday through Friday from 9:05 a.m. to 3:25 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot wraps with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes T5 troffers and indirect pendant fixtures. Exterior lighting consists of a variety of building-mounted or pole fixtures with metal halide or compact fluorescent lamps. The interior lights are typically in use weekdays 6:00 a.m. to 9:00 p.m. to allow for maintenance services and extracurricular activities.

HVAC

The building is provided with heating, cooling and ventilation by 3 RTUs and 5 MAUs located on the roof and by 2 AHUs located in a mechanical mezzanine. RTU-1 and 2 serve the media center and administration area, respectively. These units are gas-fired for heating, are equipped with DX coils for cooling and have VFDs on the fans. RTU-3 provides combustion air to the boiler room. MAU-1 through 4 provide heating, cooling and ventilation to the classrooms and are equipped with VFDs, heat recovery wheels, gas-fired burners for heating, and DX coils for cooling. MAU-5 provides make-up air to the kitchen area and is also gas-fired. AHU-1 and AHU-2 provide heating, cooling and ventilation to the multi-purpose room and cafeteria and are equipped with DX cooling coils, hot water heating coils and VFDs. 18 rooftop exhaust fans provide exhaust to restrooms, cafeteria, kitchen, and custodian closets.

Boiler

The building is provided with heating hot water by 2 gas-fired H.B. Smith 28A-10 cast iron boilers, each with an input capacity of 3,172 MBH. The hot water is distributed throughout the two-pipe system by 4 pumps equipped with VFDs that operate based on differential pressure. 2 HP pump P-1 and 7.5 HP pump P-3 operate for a week, then 2 HP pump P-2 and 7.5 HP pump P-4 will cycle on the following week. The majority of classrooms, offices, and common areas are heated by hot water convectors equipped with electronic two-way valves. The boilers are enabled when the outside air temperature is below 65 deg. F and are equipped with modulating burners to adjust the hot water supply temperature.

Cooling

The building is cooled by RTU-1, RTU-2, MAU-1, MAU-2, MAU-3, MAU-4, AHU-1, and AHU-2. All of these units are packaged rooftop units with DX cooling coils and air-cooled condensing units, except for AHU-1 and AHU-2 which are indoor units with the air-cooled condensing sections located on the rooftop. There are 5 Mitsubishi Mr. Slim split-systems that serve small offices and IT rooms. The combined cooling capacity of this equipment is 173 tons.

Edgewood Elementary School

Building

The Edgewood Elementary School building is a one-story brick building constructed in 1957. The building contains 41,888 sq. ft. of usable space consisting of an all-purpose room, library, offices, and classrooms. The curtain wall systems throughout the building were installed about 15 years ago and consist of a lower 1/3 insulated panel and upper 2/3 aluminum framed double pane windows. Exterior classroom doors are metal slab doors while main entrance doors have various percentages of glazing. Doors appear to have gaps and worn weather stripping.

"Page content is subject to Confidentiality Restrictions"

Building Occupancy

The Edgewood Elementary School building in Bristol is occupied Monday through Friday from 9:05 a.m. to 3:25 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot wraps with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 60- and 90-Watt incandescent cans and squares, 9- and 13-Watt compact fluorescents, single-lamp cove fixtures with T12 lamps and magnetic ballasts, and T5 high-bays in the cafeteria. Exterior lighting consists of a variety of building-mounted fixtures with metal halide or high-pressure sodium lamps. The interior lights are typically in use weekdays 6:00 a.m. to 9:00 p.m. to allow for maintenance services and extracurricular activities.

HVAC

The 2 unit ventilators serving the all-purpose room are equipped with hot water coils that provide heating and ventilation to the space. The unit ventilators serving the classrooms are equipped with hot water coils for providing heat but the outdoor air louvers have been permanently sealed because they were too drafty. About a dozen rooftop exhaust fans provide general and restroom exhaust.

Boiler

The building is provided with heating hot water by 2 H.B. Smith 28A-9 cast iron boilers, each with an input capacity of 2,744 MBH. Both are equipped with Powerflame C2-OB oil-fired burners. The hot water is distributed to 3 building zones by 5 pumps. The 10 HP pumps P-1 and P-2 operate in lead/lag and serve the northern classrooms. The 1 HP pump P-3 serves the administration area. The 1 HP pumps P-4 and P-5 operate in lead/lag and serve the southern classrooms. The majority of the classrooms and offices have hot water convectors that are equipped with pneumatic 2-way valves controlled by pneumatic thermostats. 2 ceiling-hung Trane unit ventilators equipped with hot water coils heat the all-purpose room. Floor-mounted unit ventilators heat a handful of classrooms. Unit ventilators have pneumatically controlled dampers and 2-way hot water valves. The boilers operate based on day and night pressure settings controlled by an Intermatic time clock.

Cooling

Only a small percentage of the building is cooled. The main office area is cooled by a DX split-system that distributes the conditioned air through overhead ductwork. There are three window air conditioners that cool Classroom 16, the health office and the faculty room. Additional cooling is provided to the IT room by a Sanyo split-system.

"Page content is subject to Confidentiality Restrictions"

Mountain View Elementary School

Building

The Mountain View Elementary School building is a two-story brick and concrete block building constructed in 1966. The 56,522 sq. ft. building contains a media center, multi-purpose room, cafeteria, classrooms and offices. The building was renovated in 2007 with double glazed aluminum frame hopper and fixed style windows. The building has a flat rubber roof with a gravel top coat. A central courtyard provides day light to the main corridor and a few interior spaces.

Building Occupancy

The Mountain View Elementary School building in Bristol is occupied Monday through Friday from 9:05 a.m. to 3:25 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot wraps with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 18-Watt compact fluorescents, and T5 biax high-bays in the gym. Exterior lighting consists of a variety of building-mounted fixtures with metal halide, compact fluorescent or standard T8 lamps. The interior lights are typically in use weekdays 6:00 a.m. to 9:00 p.m. to allow for maintenance services and extracurricular activities.

HVAC

The HVAC system was renovated in 2007 with all new equipment and distribution systems. The classrooms are provided with heating, cooling and ventilation by MAU-1 through 4 located on the roof. These units are equipped with air-to-air heat exchangers, supply and return fan VFDs, gas heaters, and DX cooling coils. MAU-5 serves the kitchen make-up air requirements. AHU-1 located in a mechanical mezzanine serves the multi-purpose room and provides heating, cooling and ventilation. The unit is equipped with a hot water heating coil, DX cooling coil, and supply fan VFD. Rooftop units RTU-1 through 4 serve the media center, administration, cafeteria and boiler room, respectively. These units are equipped with gas heaters but only RTU-1 and RTU-2 have DX cooling coils and only RTU-3 has a supply fan VFD. All of the classrooms and offices with exterior walls are provided with additional heat by hot water convectors equipped with electronic two-way valves. 12 rooftop exhaust fans provide exhaust to restrooms, kitchen, elevator room, and kiln. All HVAC equipment is controlled by a BMS and operate based on setpoint temperatures and schedules.

Boiler

The building is provided with heating hot water by 2 gas-fired Burnham V1110 cast iron boilers, each with an input capacity of 2,396 MBH. Heating hot water is distributed to the baseboard radiation loop by 5 HP pumps HWP-3 and HWP-4 equipped with VFDs and operating in lead/lag sequence. Heating hot water is

"Page content is subject to Confidentiality Restrictions"

distributed to AHU-1 by 1 HP pumps HWP-5 and HWP-6, also equipped with VFDs and operating in lead/lag sequence. The boilers are controlled by a BMS that operates them in lead/lag sequence when the outdoor air temperature is below 55 deg. F. The hot water supply temperature is on a reset schedule based on outdoor air temperature as well.

Cooling

A majority of the occupied building space is cooled by one of the rooftop MAUs, AHU or RTUs. The rooftop equipment is packaged with the air-cooled condensing unit while indoor AHU-1 is paired with an outdoor air-cooled condensing unit. The units have a total cooling capacity of 101 tons.

South Side Elementary School

Building

The South Side Elementary School building is a two-story brick and block building constructed in 1970. The building contains 64,590 sq. ft. of usable space consisting of classrooms, offices, cafeteria, gym, auditorium, and library. Windows throughout the building are single glazed in metal frames but are in fair condition. The flat roof has a rubber membrane top coat and is also in fair condition.

Building Occupancy

The South Side Elementary School building in Bristol is occupied Monday through Friday from 9:05 a.m. to 3:25 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2- and 4-lamp, 4-foot boxes with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 13-Watt compact fluorescents, 32-Watt circline, 4-lamp T5 high-bays in the gym, and a small number of incandescent lamps. Exterior lighting consists of a variety of building-mounted or pole fixtures with high-pressure sodium, incandescent floods or LED's. The interior lights are typically in use weekdays 6:00 a.m. to 9:00 p.m. to allow for maintenance services and extracurricular activities.

HVAC

A building is provided with heating, cooling, and ventilation by a combination of RTUs, indoor HVs, and unit ventilators. A packaged Aaon RTU provides heating, cooling, and ventilation to the library with dual temperature water coil and economizer. The unit has a 5 HP supply fan and 2 HP return fan, both with premium efficiency motors. HV-1, 2, and 3 serve the left side of gym, right side of gym and café and provide steam heating and ventilation only. 33 AAF unit ventilators provide heating, cooling and ventilation to the classrooms. These units have dual temperature water coils and outdoor air dampers for modulating ventilation rates. 7 rooftop exhaust fans provide general exhaust for the building.

"Page content is subject to Confidentiality Restrictions"

Boiler

Low pressure steam is generated by two H.B. Smith 4500 Mills cast iron boilers, each with a gas input capacity of 3,207 MBH. LPS is sent to a heat exchanger that transfers the energy to the heating hot water supply. 5 HP pumps P-1 and P-2 distribute the heating hot water through the dual temperature loop.

Cooling

Chilled water for the AHU and UVs is produced by a Carrier chiller with a cooling capacity of 140 tons. Chilled water is delivered to the terminal coils by a 5 HP pump P-3. The boilers are enabled during the heating season and then the dual temperature system is manually switched to cooling and the chiller is enabled during the cooling season.

Administration Building & Warehouse

Building

The Board of Education Administration building was constructed in 1930 and initially served as the Bristol South Side School. The three-story brick and concrete building currently contains 30,256 sq. ft. of office and meeting space.

The Administrative Warehouse building is located in the rear lot of the Administration building and receives water and gas service from the Administration building. The single story building was constructed in 1980 of steel and concrete with exterior metal siding. It contains 7,616 sq. ft. of usable space used primarily for storage.

Building Occupancy

Both the Administrative building and adjacent Warehouse are primarily occupied Monday through Friday from 8:00 a.m. to 4:00 p.m.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot troffers with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 13-Watt compact fluorescents, and 60-, 100-, 150- or 300-Watt incandescent lamps, primarily in recessed cans, track lighting or decorative fixtures. Exterior lighting consists of a variety of building-mounted fixtures with high-pressure sodium or compact fluorescent lamps. The interior lights are typically in use weekdays from 8:00 a.m. to 4:00 p.m. with extended hours for maintenance services and occasional use on weekends.

"Page content is subject to Confidentiality Restrictions"

HVAC

The Administration 2nd and 3rd floors are provided with cooling and ventilation only by a packaged Trane RTU that distributes the conditioned air through an overhead VAV system. The RTU has a cooling capacity of 30 tons, a 10 HP supply fan and 2 HP return fan. A small packaged Carrier RTU provides cooling and ventilation to the auditorium and has a cooling capacity of 5 tons. The 1st floor is cooled by a small indoor AHU with a cooling capacity of 1.5 tons. The building is heated primarily by hot water baseboard units controlled by old electronic thermostats. The cooling only units are controlled by separate digital thermostats.

The Warehouse is heated by two gas-fired unit heaters, each with an input capacity of 130 MBH. The office is cooled by a window air conditioner with ½ ton cooling capacity.

Boiler

The heating fuel source was recently converted from oil to natural gas. Heating hot water is provided by two fairly new HB Smith 19HE-06 boilers, each with input capacity of 938 MBH. Two 3 HP pumps distribute the heating hot water throughout the building's radiation loop. The boilers are controlled by a Heat-Timer SQ-Elite-8T controller that operates the boilers based on outdoor air temperature and targeted hot water supply temperature. The pumps operate in lead/lag sequence.

Cooling

Cooling at the Administration Building is provided by two packaged RTUs, one AHU, and a Sanyo split-system. All units have DX cooling coils and air-cooled condensers and have a combined cooling capacity of approximately 40 tons.

City Hall & Annex

Building

The Bristol City Hall is a four story building constructed in 1963. The building contains 58,289 sq. ft. of space consisting of offices and meeting space serving departments such as the Mayor's Office, City Treasurer, Clerk, Building and Parks Department, and Council Chambers. The building's exterior is concrete and brick veneer with window openings located at each column. The windows are metal frame, single pane windows with storms.

The City Hall Annex building located in the west parking lot is a single story structure made of brick and concrete. The building contains 1,764 sq. ft. of space used for storage and maintenance.

Building Occupancy

The City Hall building and Annex are occupied primarily Monday through Friday from 8:30 a.m. to 5:00 p.m.

Lighting

Interior lighting consists primarily of 4-lamp, 4-foot troffers, 2-lamp industrials and 1-lamp valences with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 15-Watt compact fluorescents. Exterior lighting consists of 25-Watt compact fluorescent building-mounted fixtures and high-pressure sodium parking area floods. The interior lights are typically in use weekdays 8:30 a.m. to 5:00 p.m. with extended hours for maintenance services and occasional use on weekends.

HVAC

The majority of the building is heated, cooled and ventilated by vintage American Standard AHUs located in the mechanical penthouse. AHU-1 through AHU-5, and AHU-8 serve the interior zones, perimeter zones, office areas, council chambers, public works and maintenance office, respectively. AHU-1 serves a constant volume system and is equipped with hot water coil, chilled water coil, economizer, 15 HP supply air fan and 7.5 HP return air fan. AHU-2 has a steam coil, chilled water coil, 15 HP supply air fan, and shares the 7.5 return air fan from AHU-1. AHU-3 has a steam coil, chilled water coil, and 2 HP supply air fan. AHU-4 has a steam coil, chilled water coil, economizer and 3 HP supply air fan. AHU-5 located in a basement mechanical room provides heating, cooling and ventilation to the adjacent public works office area. The unit has a steam coil, chilled water coil, economizer and 10 HP supply air fan. AHU-8 has a steam coil, chilled water coil, economizer and 3 HP supply air fan. The AHUs have outdoor air reset control that adjusts the supply air discharge temperatures based on outdoor air temperature. Heating and cooling is controlled by a BMS with an Invensys GCM front end that communicates with thermostats controlling pneumatic valves and actuators throughout the building by means of I/P transducers. Interior zones are conditioned by AHU-1 using VAV boxes located above the dropped ceilings in each space. Thermostats within the conditioned spaces communicate with the VAV boxes to open or close either the bypass damper or space damper, depending on demand. Perimeter offices are heated by floor mounted induction units equipped with hot water coils and 2-way valves. Primary air for these units is provided by AHU-2. Offices have temperature sensors that communicate with the BMS and terminal units. The basement shooting range is heated and ventilated by an outdoor gas-fired Reznor unit with a local timer control. Seven vintage American Standard exhaust fans provide general exhaust to the building.

Boiler

Two oil-fired Columbia MPH-60 boilers generate low pressure steam that is used directly by AHU coils and also feeds into shell and tube heat exchangers to generate heating hot water. Each boiler is rated at 60 HP and are equipped with dual-fuel burners. A 15 HP pump, DTP-2, distributes HHW during the winter only. A 5 HP pump, DTP-1, can be used as back-up for both CHWS and HHW.

There is a large changeover valve in boiler room to switch between winter HHW and summer CHW.

Cooling

An original Trane Model CGWB dual-compressor, semi-hermetic, water-cooled packaged chiller with a cooling capacity of 180 tons is still in operation and was rebuilt in late 1980's. Two new compressors were installed last year on the chiller. CHWS ties into the dual temperature hydronic system in the boiler room. No

"Page content is subject to Confidentiality Restrictions"

VFDs are installed on these pumps. A 10 HP pump, CHWP-1, distributes chilled water during summer only. A 5 HP pump, DTP-1, can be used as back-up for both CHWS and HHW. Two 15 HP pumps serve the condenser water system and are equipped with VFDs. Condenser water is pumped up to a BAC cooling tower located on roof. The chiller has outdoor air reset control that adjusts chilled water supply temperature based on outdoor air temperature.

Water Main Office & Garage

Building

The Water Main Office building is a single story brick and block building with a flat rubber roof. The building contains 10,753 sq. ft. of office space used by the Bristol Water Department.

The Water Main Office Garage is located in the rear lot of the Office building. The 10,753 sq. ft. concrete block building has a brick veneer, sloped roof with asphalt shingles and is used primarily for vehicle maintenance.

Building Occupancy

The Water Main Office and Garage is occupied Monday through Friday from 7:00 a.m. to 4:00 p.m. with occasional use on weekends.

Lighting

Interior lighting for the Main Office consists primarily of 2-, 3-, or 4-lamp fixtures with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 13-Watt compact fluorescents, 32-/22-Watt circline, 75- or 100-Watt incandescent lamps, 2-lamp, 8-foot T12 lamps with magnetic ballasts, and LED's. Interior lighting for the garage consists of 2-lamp 4-foot standard, 32-Watt T8 industrials. Exterior lighting for the Main Office consists of a variety of building-mounted or pole fixtures with high-pressure sodium or metal halide lamps. Exterior lighting for the Garage consists of high-pressure sodium wall packs. The interior lights are typically in use weekdays from 7:00 a.m. to 4:00 p.m. with extended hours for maintenance services and occasional use on weekends.

HVAC

The Water Main Office is supplied with electric heating and cooling by a single 10 ton Carrier heat pump unit located on the roof. Perimeter heating is also supplied to the building through baseboard hot water heaters. The building has dedicated cooling for the server closet and the meter shop. These spaces are cooled by DX split systems with outdoor condensers rated at 4 tons each. Hot water unit heaters and electric air conditioning units can be found in the kitchen, lobby and shop areas as well.

"Page content is subject to Confidentiality Restrictions"

The Water Main Office Garage building is heated by four gas fired unit heaters throughout the space rated at an estimated 100 MBH each. These units are controlled by standalone wall mounted thermostats.

Boiler

The Water Main office is heated by an A.O. Smith oil-fired hot water boiler Model 19A-S/W-05 and rated at 560 MBH. The buildings domestic hot water supply is produced by a 40 gallon, 4500w, A.O. Smith electric storage water heater.

Cooling

The building cooling is served by the Carrier heat pump unit serving the interior offices. This building has no chilled water plant. Dedicated cooling for the server closet and the meter shop are served by DX split systems rated at 4 tons each.

Water Filtration Plant & High Service Pump Station

Building

The Water Filtration Plant & High Service Pump Station building is a one-story brick and block building located in Bristol, Connecticut. The building contains 29,776 sq. ft. of usable space.

Building Occupancy

The Water Filtration Plant & High Service Pump Station building in Bristol is occupied Monday through Sunday from 12:00 a.m. to 12:00 a.m.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot troffers or vapor-tights with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes T5 lamps in high-bays, 15-Watt compact fluorescents, and 60-, 100-, 150- or 300-Watt incandescent lamps, primarily in recessed cans, keyless sockets or floods. Exterior lighting consists of a variety of building-mounted fixtures with incandescent or high-pressure sodium lamps and driveway poles with high-pressure sodium lamps.
The interior lights in key areas are in use on a 24-hour basis.

HVAC

The office building is heated and ventilated by a central air system. The main AHU-1 found in the boiler room is a hot deck/ cold deck unit operating on a Barber Coleman pneumatic system. This multi-zone air handler is equipped with a 10 HP supply fan and has an 84% efficiency rating. The discharge air temperature for each zone is adjusted by pneumatic

"Page content is subject to Confidentiality Restrictions"

mixing dampers and controlled by a local thermostat. Perimeter heating consists of hot water baseboard and unit heaters throughout the space. The High Service Pump Station building is ventilated through a louver and exhausted by a dedicated exhaust fan on the roof. The main piping gallery is dehumidified by a Dry-o-tron desiccant dehumidifier and a secondary reheat coil.

Boiler

The Filtration Plant central boiler is a Crown Freeport model VH-11 hot water boiler with a gross output rating of 2,500 MBH and efficiency of approximately 83%. The High Service Pump Station is served by a Dunkirk oil fired boiler serving the hot water rated at a gross output of 178 MBH.

Cooling

A TRANE model CGW reciprocating central chiller serves this site with plant cooling. This chiller is rated for 30 tons and gets service water from underground recycling.

#1 Well House

Building

The Well House #1 building is a one-story brick and block building located in Bristol, Connecticut. The building contains 257 sq. ft. of usable space.

Building Occupancy

The Well House #1 building in Bristol is occupied Monday through Sunday from 6:00 a.m. to 6:30 a.m.

Lighting

Interior lighting consists of 2-lamp, 4-foot industrials with T12 lamps and magnetic ballasts. Exterior lighting consists of a two-lamp, 75-Watt incandescent flood. The interior lights are typically in use on average 30 minutes per day.

HVAC

The building is served by an exhaust fan controlled by a thermostat.

Boiler

This Well House is served by one hanging Qmark electric unit heater with a full load input capacity of 24 MBH.

Cooling

The building is not cooled.

"Page content is subject to Confidentiality Restrictions"

#2 Well House

Building

The Well House #2 building is a one-story brick and block building located in Bristol, Connecticut. The building contains 257 sq. ft. of usable space.

Building Occupancy

The Well House #2 building in Bristol is occupied Monday through Sunday from 6:00 a.m. to 6:30 a.m.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot vapor-tights with T12 lamps and magnetic ballasts. Additional lighting includes 2-lamp, 4-foot vapor-tights with standard, 32-Watt T8 lamps and electronic ballasts. Exterior lighting consists of a high-pressure sodium wall pack and compact fluorescent cylinders. The interior lights are typically in use on average 30 minutes per day.

HVAC

The building is served by an exhaust fan controlled by a thermostat.

Boiler

This Well House is heated by one hanging Qmark electric unit heater with a full load input capacity of 24 MBH.

Cooling

The building is not cooled.

Chemical Control, Generator & #3-5 Well Houses

Building

The Chemical Control, Generator & Well Houses #3-5 building is a one-story brick and block building located in Bristol, Connecticut. The building contains 1,673 sq. ft. of usable space.

Building Occupancy

The Chemical Control, Generator & Well Houses #3-5 building in Bristol is occupied Monday through Sunday from 6:00 a.m. to 6:30 a.m.

"Page content is subject to Confidentiality Restrictions"

Lighting

Interior lighting consists primarily of 100- or 150-Watt incandescent lamps in explosion-proof fixtures. Additional lighting includes 2-lamp, 8-foot strips with T12 lamps and magnetic ballasts. Exterior lighting consists of high-pressure sodium wall packs and a 75-Watt incandescent lamp in an explosion-proof fixture. The interior lights are typically in use on average 30 minutes per day.

HVAC

Well Houses #3, #4 and #5 do not receive outdoor air ventilation, they are each served by an exhaust fan and a unit heater on a thermostat.

The Chemical Control Building is also served by an exhaust fan and a unit heater on a thermostat.

Boiler

Well Houses #3, #4 and #5 are each served by one hanging Berko electric unit heater with a full load input capacity of 24 MBH. The Chemical Control Building is served by three hanging Qmark electric unit heaters with a total full load input capacity of 71 MBH.

Cooling

The building is not cooled.

Mechanic Street Chemical Control

Building

The Mechanic Street Chemical Control building is a one-story block building located in Bristol, Connecticut. The building contains 912 sq. ft. of usable space.

Building Occupancy

The Mechanic Street Chemical Control building in Bristol is occupied Monday through Sunday from 6:00 a.m. to 6:30 a.m.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot vapor-tights with T12 lamps and magnetic ballasts. Additional lighting includes a 28-Watt compact fluorescent rectangle. Exterior lighting consists of compact fluorescent cylinders. The interior lights are typically in use on average 30 minutes per day.

"Page content is subject to Confidentiality Restrictions"

HVAC

The Chemical Control Building on Mechanic Street is served by an exhaust fan on a thermostat.

Boiler

The Chemical Control Building on Mechanic Street is served by two hanging Federal Pacific electric unit heaters with a full load input capacity of 24 MBH each.

Cooling

The building is not cooled.

Peck Lane Pump Control

Building

The Peck Lane Pump Control building is a one-story block building located in Bristol, Connecticut. The building contains 865 sq. ft. of usable space.

Building Occupancy

The Peck Lane Pump Control building in Bristol is occupied Monday through Sunday from 6:00 a.m. to 6:30 a.m.

Lighting

Interior lighting consists of 2-lamp, 4-foot vapor-tights with standard 32-Watt T8 lamps and electronic ballasts. Exterior lighting consists of compact fluorescent wall packs and a 2-lamp, 75-Watt flood. The interior lights are typically in use on average 30 minutes per day.

HVAC

The Pump Control Building on Peck Lane is served by an exhaust fan on a thermostat.

Boiler

The Pump Control Building on Peck Lane is heated by one hanging Taskmaster electric unit heater with a full load input capacity of 24 MBH.

Cooling

The building is not cooled.

"Page content is subject to Confidentiality Restrictions"

Hill Street Pump Control & Generator

Building

The Hill Street Pump Control & Generator building is a one-story block building located in Bristol, Connecticut. The building contains 2,400 sq. ft. of usable space.

Building Occupancy

The Hill Street Pump Control & Generator building in Bristol is occupied Monday through Sunday from 6:00 a.m. to 6:30 a.m.

Lighting

Interior lighting consists of 200-Watt lamps in keyless sockets. Exterior lighting consists of a 13-Watt compact fluorescent jar. The interior lights are typically in use on average 30 minutes per day.

HVAC

The Pump Control & Generator Building on Hill Street is served by an exhaust on a thermostat. Hot water baseboard serves each room controlled by stand-alone thermostats.

Boiler

One space heating oil-fired Dunkirk Empire II hot water boiler with an input capacity of 175 MBH heats this space. This boiler has a rated efficiency of 82.4%. The space is also served by one hanging Singer electric unit heater with a full load input capacity of 24 MBH.

Cooling

The building is not cooled.

Wolcott Street Pump and Control

Building

The Wolcott Street Pump and Control building is a four-story vinyl and concrete building located in Bristol, Connecticut. The building contains 610 sq. ft. of usable space.

Building Occupancy

The Wolcott Street Pump & Control building in Bristol is occupied Monday through Sunday from 6:00 a.m. to 6:30 a.m.

Lighting

Interior lighting consists of 2-lamp, 4-foot vapor-tights with standard 32-Watt T8 lamps and electronic ballasts. Exterior lighting consists of high-pressure sodium wall packs. The interior lights are typically in use on average 30 minutes per day.

HVAC

The Pump Control Building on Wolcott Street is served by an exhaust fan on a thermostat.

Boiler

This Building is heated by one hanging Qmark electric unit heater with a full load input capacity of 24 MBH.

Cooling

The building is not cooled.

Police Court & Parking Garage

Building

The Police Court & Parking Garage building is a four-story brick and concrete building located adjacent to City Hall and connected by an elevated catwalk. The 83,343 sq. ft. building houses court rooms, offices and a garage.

Building Occupancy

The Police Court & Parking Garage building is occupied 24 hours per day, 365 days per year.

Lighting

Interior lighting consists primarily of 4-lamp, 4-foot troffers and 2-lamp wraps with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 18- and 26-Watt compact fluorescents and LED's. Exterior lighting consists of 2-lamp, 4-foot wraps with standard 32-Watt T8 lamps and electronic ballasts and metal halide shoe fixtures. The interior lights in key areas are in use on a 24-hour basis.

HVAC

The first and second floors of the Police Court building are heated, cooled, and ventilated by five (5) AHU's with supply fans ranging from 7.5HP-15HP. AHU-1 serves the police department admin wing and has VFDs

"Page content is subject to Confidentiality Restrictions"

on its supply and return fan motors. AHU-2 also serves this area but does not have VFD controls. AHU-3 and AHU-4 serve the court areas. These air handlers have 3-way valves on the chilled water coils and 2-way valves on the hot water coils. Variable Air Volume (VAV) boxes regulate air flow from the air handlers to control space temperatures can also be found throughout the building. The basement garage is heated by hot water unit heaters which are typically controlled by unit mounted controllers. Eleven (11) exhaust fans help ventilate spaces in the building such as the basement garage, holding cells, kitchen and other general areas.

Boiler

The Police Court building is served by three oil-fired boilers. Two (2) HB smith 350 Mills cast iron boilers generate low pressure steam and each have an output capacity of 1,036 MBH input. Low pressure steam is sent to a heat exchanger in the boiler room which generates heating hot water to be distributed by eight (8) pumps serving the basement garage, main floor, second floor, and reheat coils. One (1) Weil McClain 478 oil-fired, hot water boiler is used for summer use as well as additional heat for the cell holding area.

Cooling

A new Marley SPX cooling tower located on the roof serves a 150-ton TRANE RTHB150FMC- scroll water-cooled chiller and supplies the first and second floor with cooling. The chilled water produced by this chiller runs through the buildings air handling units. The basement area is served by a Trane RAUA-2504-MC 25 ton air-cooled condensing unit located on the roof. The Data room is 5-ton Data Aire DRCF-0534 split system. Two additional Sanyo split systems serve additional space in the Police Court building.

Rockwell Park & Pavilion

Building

The Rockwell Park & Pavilion building is a one-story brick and block building located in Bristol, Connecticut. The building contains 5,302 sq. ft. of usable space.

Building Occupancy

The Rockwell Park & Pavilion building in Bristol is typically occupied Monday through Friday from 6:00 a.m. to 3:00 p.m.

Lighting

Interior lighting consists primarily of 2-lamp wraps with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 13-Watt compact fluorescents and 60-Watt incandescent jars, squares and keyless sockets. The interior lights have low operating hours and is used primarily for holiday festivities.

HVAC

The Rockwell Park building is served by baseboard hot water heaters throughout the offices and common area. Two hanging hot water Modine unit heaters serve the garage and main sitting area, which are both on their own thermostats. This space is ventilated by a switch operated exhaust fan.

The Rockwell Park Pavilion building is served by two oil-fired hot air furnaces each on their own thermostat.

Boiler

The Rockwell Park building is served by one Burnham 84 WNH hot water boiler with an input load capacity of 159 MBH. Domestic hot water is produced by a 30 gallon A.O. Smith electric storage heater.

The Pavilion Building is served by two oil fired International forced air furnaces, which both have an input capacity of 127 MBH. Domestic hot water is provided by a 40 gallon GE electric storage heater.

Cooling

Window and wall AC units serve the Rockwell park building.

Bathhouse

Building

The Bathhouse building is a one-story brick and block building located in Bristol, Connecticut. The building contains 0 sq. ft. of usable space.

Building Occupancy

The Bathhouse building is unoccupied.

Lighting

Interior lighting consists of 60-Watt incandescent squares. Exterior lighting consists of high-pressure sodium wall packs. The facility is currently not used.

HVAC

The building does not receive outdoor air ventilation. The Bathhouse is served by an exhaust fan and two electric unit heaters rated at 4kW each on a single thermostat.

Boiler

The domestic hot water for the building is produced by a 30 gallon electric water heater.

Cooling

This building is not cooled.

"Page content is subject to Confidentiality Restrictions"

Muzzy Field

Building

The Muzzy Field building is a one-story brick and block building located in Bristol, Connecticut. The building contains 1,104 sq. ft. of usable space.

Building Occupancy

Muzzy Field has varying times of occupancy depending on when the field is used for games and events throughout the spring, summer and fall.

Lighting

Interior lighting consists primarily of 2- or 4-lamp, 4-foot wraps or troffers or 2-lamp, 8-foot wraps with T12 lamps and magnetic ballasts. Additional lighting includes 60-Watt incandescent lamps in keyless sockets. Exterior lighting consists of 1,500-Watt metal halide high-poles and 175-Watt metal halide shoebox fixtures for the sports field and building-mounted wall packs with metal halide lamps. The facility currently has low use with lighting in use approximately 150 hours per year.

HVAC

Qmark electric unit heaters provide heating to some of the conditioned space at Muzzy field. The locker rooms are heated by two gas fired unit heaters. Two rooftop exhaust fans serve each of the restrooms. The press box is heated and cooled by a through-the-wall air conditioner with an electric resistance heating element.

Boiler

There are two gas fired Hot Water heaters used to serve the showers and sinks. The first is a 40 gallon Rheem and the other is a 50 gallon Vanguard which are found in the bathrooms. There is also a 120 gallon Hubbell electric water heater in the mechanical room which serves additional domestic hot water loads.

Cooling

The building is not cooled.

Ski Lodge

Building

The Ski Lodge building is a one-story wood framed structure with interior and exterior wood paneling. The building contains 655 sq. ft. of open, usable space. The building has single pane, aluminum framed windows and doors in poor condition. The sloped, asphalt shingle roof also looks to be worn.

Building Occupancy

The Ski Lodge building is used sparingly throughout the year for a language course as little as 1 hour per week.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot wraps with T12 lamps and magnetic ballasts. Additional lighting includes 26-Watt compact fluorescent and 60-Watt incandescent squares. Exterior lighting consists of metal halide wall packs.

HVAC

The building does not receive outdoor air ventilation. 2 Singer 3000W electric unit heaters provide heating to the space and operate based on a local control dial. A rooftop exhaust fan serves the restroom.

Boiler

Domestic hot water for the restrooms is provided by a 6 gallon electric A.O. Smith water heater.

Cooling

The building is not cooled.

Page Park Pavilion

Building

The single story Page Park Pavilion building was constructed in 1963 and has a steel and wood frame structure with a combination of masonry block walls and wood siding. Windows at the entrance vestibule are double pane glazing in aluminum frame but the remaining windows are Plexiglas panels in wooden frames. The building was recently renovated with a new standing seam metal roof system. The building contains a 2,938 sq. ft. open space used for public gymnastic and art classes.

"Page content is subject to Confidentiality Restrictions"

Building Occupancy

The Page Park Pavilion building is occupied sparingly throughout the year for gymnastic and art classes.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot wraps with standard 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 2-lamp, 4-foot wraps with T12 lamps and magnetic ballasts, 22-/32-Watt circline drums, and 60-Watt incandescent squares.

HVAC

Two ceiling fans circulate conditioned air throughout the space. A sidewall exhaust fan provides exhaust for the restroom.

Boiler

Heating hot water is generated by an oil-fired cast iron boiler with an input capacity of 707 MBH. The boiler is equipped with a Carlin 201CRD burner. Two fractional HP pumps distribute heating hot water to terminal units along the east and west zones of the building including cabinet unit heaters and convectors. A 19 gallon, 6,000W electric water heater provides domestic hot water for the restroom. The boiler is controlled by two vintage Johnson Control thermostats that operate the boiler based on setpoint temperature.

Cooling

The building is not cooled.

Dennis Malone Aquatic Center

Building

The Dennis Malone Aquatic Center building is a one-story vinyl building located in Bristol, Connecticut. The building contains 14,484 sq. ft. of usable space.

Building Occupancy

The Dennis Malone Aquatic Center building in Bristol is occupied Monday through Friday from 7:00 a.m. to 9:00 p.m., on Saturday from 6:30 a.m. to 5:45 p.m. and Sunday from 7:00 a.m. to 5:45 p.m.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot troffers, vapor-tights and wraps with standard, 32-Watt T8 lamps and electronic ballasts and 250-Watt mercury vapor high-bays in the pool area. Additional lighting includes 13- and 18-Watt compact fluorescents, 60-Watt incandescent lamps, 2-lamp, 4-foot T12 lamps with

"Page content is subject to Confidentiality Restrictions"

magnetic ballasts, and 250-Watt mercury vapor cylinders. Exterior lighting consists of a variety of building-mounted fixtures with mercury vapor, incandescent, or metal halide. The interior lights are typically in use 14 hours per day Monday through Friday and 12 hours per day Saturday and Sunday.

HVAC

This building is served by one Zephyr DP-6000 dehumidifying pool heater located on the mezzanine floor of the building providing 14,375 of supply air through registers located along the perimeter of the pool. A 28 kW Heatrix unit provides supplemental electric heat to the supply air after being dehumidified. Stand-alone Johnson controls control the Zephyr unit, and maintain an air temperature 3 degrees higher than the pool water temp. Rooftop exhaust fans serve each of the restrooms in the facility.

Boiler

A gas fired atmospheric Peerless 211A boiler rated at 1,050 MBH input and 840 MBH output, severs the perimeter hot water radiation for the building and hot water coil in the dehumidifying pool heater. The pool is heated by an A.O. Smith DuraMax DW-720-1810 atmospheric boiler rated at 1,210 MBH input. Domestic hot water is provided by an indirect system consisting of an A.O. Smith Burkay copper coil water heater serving a large A.O. smith storage tank located in the adjacent room.

Cooling

A condensing unit located outside the building serves the dehumidifying pool heater. A Carrier PTAC unit serves the office space.

Fire Head Quarters

Building

The Fire Head Quarters building is a two-story brick and block building located in Bristol, Connecticut. The building contains 12,084 sq. ft. of usable space.

Building Occupancy

The Fire Head Quarters building in Bristol is occupied Monday through Sunday from 12:00 a.m. to 12:00 a.m.

Lighting

Interior lighting consists primarily of 4-lamp, 4-foot troffers, with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes T5 bay fixtures and 60- and 300-Watt incandescent lamps in keyless sockets. Exterior lighting consists of building-mounted, 60-Watt incandescent decorative fixtures and 400-Watt mercury vapor floods. The interior lights in key areas are in use on a 24-hour basis.

"Page content is subject to Confidentiality Restrictions"

HVAC

Fire Head Quarters is primarily heated by perimeter baseboard hot water heaters throughout the building. Two AHU's in the 2nd floor ceiling provide cooling and ventilation air to the 2nd floor living quarters. Hot water unit heaters serve the garage bays and controlled by standard wall mount thermostats.

Boiler

An oil-fired A.O. Smith cast iron hot water boiler serves three zone pumps distributing hot water to the 1st, floor, 2nd floor and garage bays. The boiler has a rated input capacity of 1,137 MBH. Domestic hot water for the building is provided by an 80 gallon, 3500W, A.O. Smith ProMax electric storage water heater located in the boiler room with supplemental hot water storage from a TrangleTube Phase III TR-75 storage tank.

Cooling

The 2nd floor of the Fire HQ is cooled by a split system of two AHU's located in the ceiling served by two DX condensing units each 3.5 tons. Three (3) window AC units serve the first floor offices, and break room.

Engine 2

Building

The Engine 2 building is a one-story brick and block building located in Bristol, Connecticut. The building contains 4,016 sq. ft. of usable space.

Building Occupancy

The Engine 2 building in Bristol is occupied Monday through Sunday from 12:00 a.m. to 12:00 a.m.

Lighting

Interior lighting consists primarily of 1-lamp, 4-foot industrials or 2-lamp wraps with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 13-Watt compact fluorescent and 60-Watt incandescent lamps. Exterior lighting consists of building-mounted, 13- or 18-Watt compact fluorescent squares or floods and incandescent quartz floods. The interior lights in key areas are in use on a 24-hour basis.

HVAC

Engine 2 is heated by perimeter baseboard hot water heaters throughout the building.

Hot water unit heaters serve the garage bays, controlled by wall-mount thermostats.

"Page content is subject to Confidentiality Restrictions"

Boiler

This building has an oil fired, HB Smith boiler 25 Mills series, which has a capacity of 348 MBH. This boiler makes hot water for the perimeter baseboard heating in the offices and living areas and unit heaters in the bay. A 40 gallon, 4500W A.O. Smith electric storage water heater rated at 15 MBH, provides the building with domestic hot water.

Cooling

The living quarters and break room are served by two separate window air conditioners rated for 1 and 1.5 tons.

Engine 3

Building

The Engine 3 building is a one-story brick and block building located in Bristol, Connecticut. The building contains 3,268 sq. ft. of usable space.

Building Occupancy

The Engine 3 building in Bristol is occupied Monday through Sunday from 12:00 a.m. to 12:00 a.m.

Lighting

Interior lighting consists primarily of 1-lamp, 4-foot industrials or 2-lamp wraps with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 60-Watt incandescent lamps in keyless sockets. Exterior lighting consists of building-mounted incandescent quartz floods and a 75-Watt incandescent can. The interior lights in key areas are in use on a 24-hour basis.

HVAC

Engine 3 is heated by perimeter baseboard hot water heaters throughout the building. The garage bays are served by two (2) gas-fired PanelBloc Infrared radiant heaters rated at a capacity of 125 MBH each.

Boiler

Engine 3 is served by a fairly new gas-fired, Weil-McLain GV90+6 hot water boiler with a capacity of 175 MBH input with a Taco Zone control board controlling the boiler. Hot water serves perimeter baseboard heating in

"Page content is subject to Confidentiality Restrictions"

the offices and living areas. A 40 gallon, 4500W GE electric storage water heater rated at 15 MBH, provides the building with domestic hot water.

Cooling

The living quarters and break room are served by two separate window air conditioners rated for 1.5 tons each.

Engine 5

Building

The Engine 5 building is a one-story brick and block building located in Bristol, Connecticut. The building contains 3,587 sq. ft. of usable space.

Building Occupancy

The Engine 5 building in Bristol is occupied Monday through Sunday from 12:00 a.m. to 12:00 a.m.

Lighting

Interior lighting consists primarily of 1-lamp, 4-foot industrials or 2-lamp troffers with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 13-Watt compact fluorescents and 60-Watt incandescent lamps in keyless sockets. Exterior lighting consists of building-mounted incandescent quartz floods and a 2-lamp, compact fluorescent flood. The interior lights in key areas are in use on a 24-hour basis.

HVAC

Engine 5 is heated by perimeter baseboard hot water heaters throughout the building. Hot water unit heaters serve the garage bays.

Boiler

This building has an oil fired, HB Smith boiler 19 series-5, with a rated capacity of 660 MBH input. The boiler makes hot water for the perimeter baseboard heating in the offices and living areas and unit heaters in the bay. A 40 gallon, 4500W A.O. Smith electric storage water heater rated at 15 MBH, provides the building with domestic hot water.

Cooling

The living quarters are served by a window air conditioner unit rated for 1.5 tons.

"Page content is subject to Confidentiality Restrictions"

Beals Senior Center

Building

The Beals Senior Center building is a one-story half brick and block, half vinyl building located in Bristol, Connecticut. The building contains 55,866 sq. ft. of usable space.

Building Occupancy

The Beals Senior Center building in Bristol is occupied Monday through Friday from 8:00 a.m. to 5:00 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2-, 3-, and 4-lamp, 4-foot troffers with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 2-lamp, 2- and 3-foot troffers with T8 lamps and electronic ballasts, 13- and 28-Watt compact fluorescents, T5 high-bays in the gym and 60- and 75-Watt incandescent lamps in track cans and keyless sockets. Exterior lighting consists of a variety of building-mounted or pole fixtures with high-pressure sodium, incandescent, metal halide, and compact fluorescent lamps. Building signage is illuminated with 1-lamp, 4-foot and 8-foot T12 lamps with magnetic ballasts. The interior lights are typically in use Monday through Friday from 8:00 a.m. to 5:00 p.m. with occasional use on weekends.

HVAC

Heating, cooling, and ventilation air are provided to the Senior Center by six (6) York XTO-roof top units (AHU-1 thru AHU-6). The AHU's have Supply and Return fan motors ranging from 1.5 HP to 15 HP and supply a minimum of 720 - 3,720 CFM of outdoor air. AHU-1 serves the main office, AHU-2 serves the game room, AHU-3 serves the cafeteria, AHU-4 serves the pool room, AHU-5 serves the senior center and AHU-6 serves the dental/board of health section of the building. A make-up air unit MAU-1 serves the kitchen. The building is ventilated through the use of 19 different exhaust fans on the roof as well as a separate dedicated exhaust fan for the kitchen. The classroom wing is heated, cooled and ventilated by newly installed unit ventilators. Additional heat in the building is provided by baseboard and reheats in Variable Air Volume boxes. Building control is provided by a newly installed JCI Metasys system, and it was reported this will be the first winter with the new control system.

Boiler

This building's central boiler plant consists of three (3) new Patterson-Kelly MACH C-1500 gas-fired condensing boilers rated at 1,501 MBH input, 1,440 MBH output each. The boilers provide hot water to two 15HP hot water pumps which feed roof top units, air-handling units, perimeter baseboard and reheats throughout the building. Domestic hot water for the building is provided by two A.O. Smith Cyclone BTH

"Page content is subject to Confidentiality Restrictions"

199A-100 gas-fired storage water heaters. These water heaters both have a 100 gallon capacity and are rated at 200 MBH each.

Cooling

Cooling for the Senior Center is provided by two (2) York YLAA0091YE17 air cool scroll chillers located outside, each rated for 82.3 tons of cooling capacity and serve all the rooftop air handling units in order to distribute cooling throughout the building. A Trane TCH210C300EA 17.5 ton packaged unit serves the gym.

Main Library

Building

The Main Library is a two-story brick building with sections of sloped architectural roof and sections of flat rubber roof that houses mechanical equipment. The building had a major renovation performed in 2006. The building contains 55,468 sq. ft. of space used for reading, circulation materials, and audio & visual activities.

Building Occupancy

The Main Library building in Bristol is occupied Monday through Friday from 8:30 a.m. to 8:00 p.m. and on Saturday from 8:30 a.m. to 5:00 p.m.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot, indirect/direct pendant T5 biax fixtures and 2- and 4-lamp, 4-foot indirects, troffers or wraps with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 26- or 42-Watt compact fluorescents and 30-Watt incandescent halogen lamps. Exterior lighting consists of a variety of building-mounted or pole fixtures with high-pressure sodium, metal halide or compact fluorescent lamps. The interior lights are typically in use Monday through Friday from 8:30 a.m. to 8:00 p.m. and on Saturday from 8:30 a.m. to 5:00 p.m. with extended hours for maintenance services.

HVAC

The building HVAC system installed in 2006 serves the entire Library. Three (3) energy recovery units (ERUs) on the roof provide heating, cooling and ventilation air. Each unit contains chilled water coils, hot water coils and a heat recovery. A single make-up air unit MAU-1 containing hot water coils provides the mechanical room with heating and outdoor air. The history room is served by a separate RTU for its heating and cooling as well. Ventilation for this building is supplied through the use of six rooftop exhaust fans. An Invensys GCM building management system controls the HVAC system in the building.

"Page content is subject to Confidentiality Restrictions"

Boiler

The central boiler plant is comprised of two H.B. Smith gas-fired boilers rated at 1,770 MBH and 85% efficiency each which provide hot water to space heating terminal units and hot water coils in the three ERUs on the roof. The majority of system pumps are equipped with variable frequency drives (VFDs). Domestic hot water is supplied to the library by a Bradford White electric storage water heater. This water heater has a 30 gallon capacity and is rated at 15 MBH.

Cooling

Cooling for The Main Library is provided by a Cooling Technology Evapco LRC-174 outdoor chiller with a built in evaporative condenser. This chiller is 146 tons and has a 20 HP fan motor. The chilled water output is circulated through the central air handlers and 4 pipe terminal units in order to provide the building with cooling. A Trane Model YSC 4-ton unit serves the History room.

Manross Library

Building

The Manross Library is a one-story masonry block building with sloped asphalt shingle roof. The building contains 17,237 sq. ft. of space used mostly for reading and housing circulation materials. There is a small central atrium with clerestory windows that allows ample daylight to enter the building.

Building Occupancy

The Manross Library building in Bristol is occupied Monday through Thursday from 10:00 a.m. to 8:0 p.m. and on Friday through Saturday from 9:00 a.m. to 5:00 p.m.

Lighting

Interior lighting consists primarily of 2- and 4-lamp, 4-foot troffers with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 2-lamp, 3-foot T8 lamps with electronic ballasts, and 13-, 18- or 26-Watt compact fluorescents. Exterior lighting consists of a variety of building-mounted or pole fixtures with LED's, metal halide, or compact fluorescent lamps. The interior lights are typically in use Monday through Thursday from 10:00 a.m. to 8:00 p.m. and on Friday through Saturday from 9:00 a.m. to 5:00 p.m. with extended hours for maintenance services.

HVAC

The Manross Public Library is heated by hot water baseboard, Singer Incremental PTAC units and two (2) air handling units. AHU-1 is a Trane BRCA-2006-0A with a 3HP motor that services the main floor. AHU-2 is a Trane SAUA-1506A and services the basement. The building is on a digital control system but has to call a

"Page content is subject to Confidentiality Restrictions"

separate building to make any adjustments. The library is ventilated by the use of three separate exhaust fans which serve the restrooms as well as the common area.

Boiler

Hot water is provided by an H.B. Smith G2500L gas-fired boiler rated at 1,200 MBH and 83.1% efficiency. Three (3) pumps 1/4, and 1/3 HP serve the AHU's and perimeter heat. Domestic hot water is supplied to the library by two A.O. Smith EJC 6200 electric storage water heaters. These water heaters have a 6 gallon capacity each at 1650W.

Cooling

Cooling for this building is provided by a Trane RAUA-2006-MB outdoor air cooled condensing unit which is rated for 20 tons which serves the two air handling units for the first floor and basement cooling. Sixteen (16) PTAC units provide additional cooling to the main floor area.

Youth Services

Building

The Youth Services building is a three-story half brick half vinyl building located in Bristol, Connecticut. The building contains 12,816 sq. ft. of usable space.

Building Occupancy

The Youth Services building in Bristol is occupied Monday through Friday from 8:30 a.m. to 5:00 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2 U-bend lamps in troffers with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 13-Watt compact fluorescent or incandescent squares and 60-Watt, incandescent lamps in keyless sockets. Exterior lighting consists of a variety of building-mounted fixtures with compact fluorescent, incandescent or linear fluorescent T12 lamps with magnetic ballasts. The interior lights are typically in use Monday through Friday from 8:30 a.m. to 5:00 p.m. with occasional use on weekends.

HVAC

Heating, cooling and ventilation air is provided to the Youth Services building by five (5) First Co. --MBXB-HW air handling units (AHU-1 thru 5) ranging from 650-1,980 CFM.

Temperature is controlled by an EMS system, that does not have a local front end.

"Page content is subject to Confidentiality Restrictions"

Boiler

This building receives its heating from a Peerless EC/ECT-06-300 W/S oil-fired boiler. This boiler is rated 347 MBH output. This boiler also works with a TriangleTube Phase III Smart 30 indirect hot water tank with a capacity of 30 gallons.

Cooling

The cooling is supplied by five (5) Allegiance 14 - 2A7A40- condensing units located outside ranging from 1.5 to 5 tons in size. Two condensing units located on the roof serve AHU-1 and AHU-5. The other three units located on the ground outside serve AHU-2, AHU-3 and AHU-4.

Animal Control

Building

The Animal Control building is a one-story half brick half vinyl building located in Bristol, Connecticut. The building contains 2,126 sq. ft. of usable space.

Building Occupancy

The Animal Control building in Bristol operates 24/7.

Lighting

Interior lighting consists of 2-and 4-lamp wraps with standard, 32-Watt T8 lamps and electronic ballasts and a 2x60-Watt incandescent vanity. Exterior lighting consists of building-mounted can and a rectangle with incandescent lamps and an LED flood. The interior lights are typically in use on average 4 hours per day.

HVAC

This building is heated by a Conguest 90 condensing hot air furnace rated for 120 MBH. This furnace services the office, bathroom and kitchen areas. Two (2) Carrier gas-fire unit heaters each rated at 60 MBH output capacity provide heating to the kennel section of the building. All areas are controlled by local thermostats and ventilation is provided to the building by an exhaust fan on the roof.

Boiler

The Animal Control Facility is provided with domestic hot water by an A.O. Smith FCG gas-fired hot water storage heater. This heater has a capacity of 74 gallons and is rated for 75 MBH.

"Page content is subject to Confidentiality Restrictions"

Cooling

No cooling was observed in this building.

Hill Street

Building

The Hill Street building is a two-story half brick half vinyl building located in Bristol, Connecticut. The building contains 4,904 sq. ft. of vacant space.

Building Occupancy

The Hill Street building in Bristol is currently unoccupied at this time.

Lighting

Interior lighting consists primarily of 2-and 4-lamp, 4-foot wraps or troffers with T12 lamps and magnetic ballasts. Additional lighting includes 13-Watt compact fluorescents and 60-Watt incandescent. Exterior lighting consists of a 2-lamp building-mounted flood fixture. The facility is currently unoccupied at this time.

HVAC

This building receives its heating through steam radiator units.

Boiler

This building is heated by an oil-fired H.B. Smith steam boiler rated for an input capacity of 226 MBH.

Cooling

There is no cooling in this building.

City Yard

Building

The City Yard building consists of two garages, one old and one newer garage. The Old garage has offices, lunch room, locker room, tool rooms and garage bay. The newer garage consists of oil room, offices, and tool rooms, and garage bays. The buildings contain 22,629 sq. ft. of usable space.

"Page content is subject to Confidentiality Restrictions"

Building Occupancy

The City Yard building in Bristol is occupied Monday through Friday from 6:00 a.m. to 3:00 p.m.

Lighting

Interior lighting consists primarily of 1-or 2-lamp, 4-foot, troffers or industrials with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 400-Watt incandescent quartz floods, and 4-lamp T5 high-bays. Exterior lighting consists of a variety of building-mounted or pole fixtures with LED's, high-pressure sodium, metal halide, or incandescent quartz lamps. The interior lights are typically in use Monday through Friday from 6:00 a.m. to 3:00 p.m.

HVAC

The Old Garage building is heated by four (4) heating units including a gas-fired air handling unit serving the lunch room, tool room and offices, two (2) Modine heaters serve one wing of the old garage, and a waste-oil heater serves the other end. The New Garage is heated by roughly eleven Reznor and Modine gas-fired unit heaters mounted on the ceiling throughout the space.

Boiler

Domestic hot water for this building is provided by two A.O. Smith electric storage hot water heaters. The first heater has a storage capacity of 50 gallons and is rated at 12 MBH and 3375W. The second storage heater has a capacity of 15 gallons and is rated at 5 MBH and 1500W.

Cooling

Cooling for these buildings is supplied by eight window air conditioners in the offices, conference room, carpenter shop and lunch room.

Lake Ave Transfer Station

Building

The Lake Ave Transfer Station consists of a one-story trailer with wood paneling, a large shed with metal siding and batt insulation, and a gate house located in Bristol, Connecticut. The office building contains 2,763 sq. ft. of usable space.

Building Occupancy

The Lake Ave Transfer Station building in Bristol is occupied Monday through Friday from 7:00 a.m. to 3:00 p.m. with occasional use on weekends.

"Page content is subject to Confidentiality Restrictions"

Lighting

Interior lighting consists primarily of 4-lamp, 4-foot, troffers with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes low-bay fixtures with high-pressure sodium lamps and 2-lamp, 4-foot wraps with T12 lamps and magnetic ballasts. Exterior lighting consists of a variety of building-mounted fixtures with high-pressure sodium or metal halide lamps. The interior lights are typically in use Monday through Friday 7:15 a.m. to 2:45 p.m. and 7:30 a.m. to 1:00 p.m. on Saturday.

HVAC

Heating, cooling and ventilation air for the office trailer building is served by two PTAC units with built in control, one in each office.

A Reznor waste-oil heater (MN: RA-235) serves the shed building.

Cooling

PTAC units provide cooling to the office, and a roof mount unit serves the gate house.

Water Pollution Control Park

Building

The Water Pollution Control Park consists of an Administration building, Headworks, Primary Pump house, Secondary Pump Gallery, Operations building, Sludge Storage &Thickening Building, Air Blowers building, and Sludge Disposal building. All buildings are one-story brick and block construction located in Bristol, Connecticut. The buildings contain around 13,751 sq. ft. of usable space.

Building Occupancy

The Water Pollution Control Park building operates 24/7, with some buildings occupied Monday through Friday from 7:30 a.m. to 5:30 p.m. with occasional use on weekends.

Lighting

Interior lighting consists primarily of 2- and 4-lamp, 4-foot, troffers, wraps, or vapor-tights with standard, 32-Watt T8 lamps and electronic ballasts. Additional lighting includes 4-lamp T5 high-bays, 18-Watt compact fluorescents, 60- and 75-Watt incandescent cans and keyless sockets and high-pressure sodium keyless fixtures. Exterior lighting consists of a variety of building-mounted and pole fixtures with high-pressure sodium or metal halide lamps. The interior lights in key areas are in use on a 24-hour basis.

"Page content is subject to Confidentiality Restrictions"

HVAC

Heating and cooling is provided to the Administration building by newly installed PTAC units with self contained controls.

Direct gas-fired Reznor make-up air units (125-400 MBH input) serve a number of the spaces found at the WPCP, however failed MAU's have since been replaced with

Modine gas-fired, and electric horizontal unit heaters, all controlled by stand-alone thermostats.

Exhaust fans are found through out the park, including two (2) exhaust units with 25 HP motors serving the Headworks building and Sludge Thickening building which exhaust air under ground to alleviate odor. These two exhaust fans were reported to be turned off during winter when odor is less of an issue.

Boiler

There are no boilers on site, the buildings are heated by gas-fired MAU's and horizontal unit heaters as described above.

Cooling

Cooling is only provided to the Administration building through the use of PTAC units.

Remote Pumping Stations

Building

The Bristol waste water system includes fourteen (14) remote pumping stations throughout the City. Each pump station is typically a one-story brick, block, or vinyl siding type building located in Bristol, Connecticut. The buildings total around 6,750 sq. ft. of unoccupied space.

Building Occupancy

The building in Bristol is occupied Monday through Sunday from 6:00 a.m. to 6:30 a.m.

Lighting

Interior lighting consists primarily of 2-lamp, 4-foot wraps, strips, or vapor-tights with T12 lamps and magnetic ballasts. Additional lighting includes 100-Watt incandescent globes and 2-lamp vapor-tights with T12 lamps and magnetic ballasts or T8 lamps and electronic ballasts. Exterior lighting consists of a variety of building-mounted and pole fixtures with high-pressure sodium, compact fluorescent or incandescent lamps. The interior lights are typically in use on average 30 minutes per day.

"Page content is subject to Confidentiality Restrictions"

HVAC

The majority of the pump station buildings are ventilated by exhaust fans on thermostats. A number of buildings had plug-in dehumidifiers.

Boiler

The pump station buildings are primarily heated by electric resistive unit heaters rated around 5 kW controlled on thermostats.

Cooling

No cooling is present at any of the pumping stations.

Page Park Pool

Building

The Page Park Pool building is a two story concrete building with a steel structure. The 6,200 sq. ft. building contains offices, locker rooms and mechanical rooms. There is an outdoor pool located in the rear of the building that is used in the summer months.

Building Occupancy

The Page Park Pool building in Bristol is occupied daily during summer months from 7:30 a.m. to 5:30 p.m.

Lighting

Interior lighting consists primarily of 13- and 28-Watt compact fluorescent lamps. Additional lighting includes 2-lamp T12 wraps and vapor-tights, 60-Watt incandescent squares and LED's. Exterior lighting consists of building-mounted canopies with high-pressure sodium or incandescent lamps. The interior lights are in use in the summer months from 7:30 a.m. to 5:30 p.m.

HVAC

The first floor offices are heated by a number of cabinet unit heaters and ceiling hung unit heaters. The lower level locker rooms are heated by ceiling hung radiators and unit heaters. All the terminal units are equipped with steam heating coils. These units are controlled locally by T87 round thermostats. Rooftop exhaust fans serve the lower level locker rooms.

Boiler

Low pressure steam is generated by an oil-fired HB Smith 28-4 boiler with an input capacity of 980 MBH. The boiler also serves an adjacent heat exchanger that generates domestic hot water.

"Page content is subject to Confidentiality Restrictions"

Cooling

The building is not cooled.

Maintenance Requirements per ESM

For the majority of measures included in this project, O&M is expected to be approximately equal to what the City currently incurs for overall operations and maintenance, therefore O&M can continue to be performed as is. City personnel will receive training on the proper operation and maintenance of the new equipment once equipment commissioning is complete. The City will be expected to perform maintenance on a scheduled basis and repair/replacement of failed components in a timely manner, all in accordance with manufacturer's standards and/or Ameresco O&M manuals for the measures installed under this Performance Contract. If the City is unable to perform these tasks, Ameresco can provide these services for an additional fee and/or the City shall outsource to a qualified service provider. Failure of the City to carry out the aforementioned during the term of the contract, may require Ameresco to adjust the savings guarantee.

The following table describes the general maintenance responsibilities of the parties. Final operational and maintenance tasks will be developed in detail once these Energy Savings Measures (ESMs) are commissioned. Ameresco will provide the City with a set of O&M manuals that will details these tasks.

Warranty and Maintenance Response

Warranty

Ameresco will warrant the labor and material for each ESM for a period of one year from the issuance of substantial completion for each ESM. This warranty is for repair of equipment installed by Ameresco

[1] Ameresco has included a line item for costs associated with maintaining the new street lights, however, the City can either contract with Ameresco to perform these services or another third party.

only and does not include operation and maintenance unless otherwise included in the table above. After the one year period, any remaining manufacturer's warranties will be passed on to the City.

Maintenance Response

To the extent that any Ameresco maintenance services are included in the final project, all operations and services will be coordinated through the Ameresco corporate office located in Middletown, Connecticut and through local area contractors. This will provide the City with a local, single point of contact. Ameresco's Operations Manager will serve as the single point of contact for the City throughout the entire operations phase of the project.

ESM 1:
Lighting System Improvements - Interior

ESM Overview

Ameresco will install a state-of-the-art lighting system to benefit the building occupants of the City of Bristol. Our project replaces or upgrades **18,477** existing fixtures (Base T8 option), and **18,518** existing fixtures (LED T8 option) and will enhance the quality, consistency, and color rendering of the City's lighting system.

Our in-house lighting experts completed a detailed survey of the City's facilities. Ameresco has eliminated the middle-man, and having implemented projects at hundreds of facilities with similar needs, is fully capable and responsible for meeting the City's lighting needs.

Figure 1.1: New fixtures will improve aesthetics and provide substantial energy savings.

ESM Detail

Existing System

General Information about the Existing System at All Sites

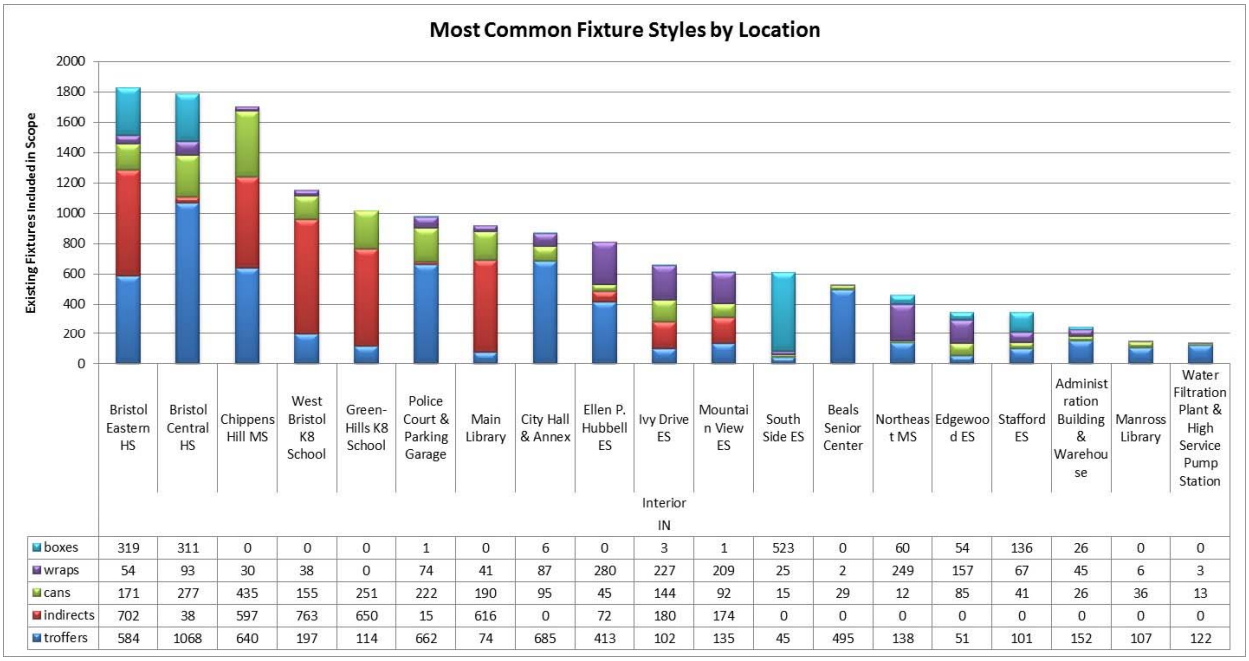
Ameresco identified 375 different lamp/ballast/fixture combinations, the majority of which are linear fluorescent, which provide general lighting in key areas such as classrooms, offices, & halls.

Approximately 86% of linear fluorescent fixtures use standard-grade T8s on electronic ballasts with a mixture of ballast factors.

There are 12% of linear fluorescent fixtures using T5s with electronic ballasts. These are found in gyms, classrooms, libraries, hallways, offices and garages.

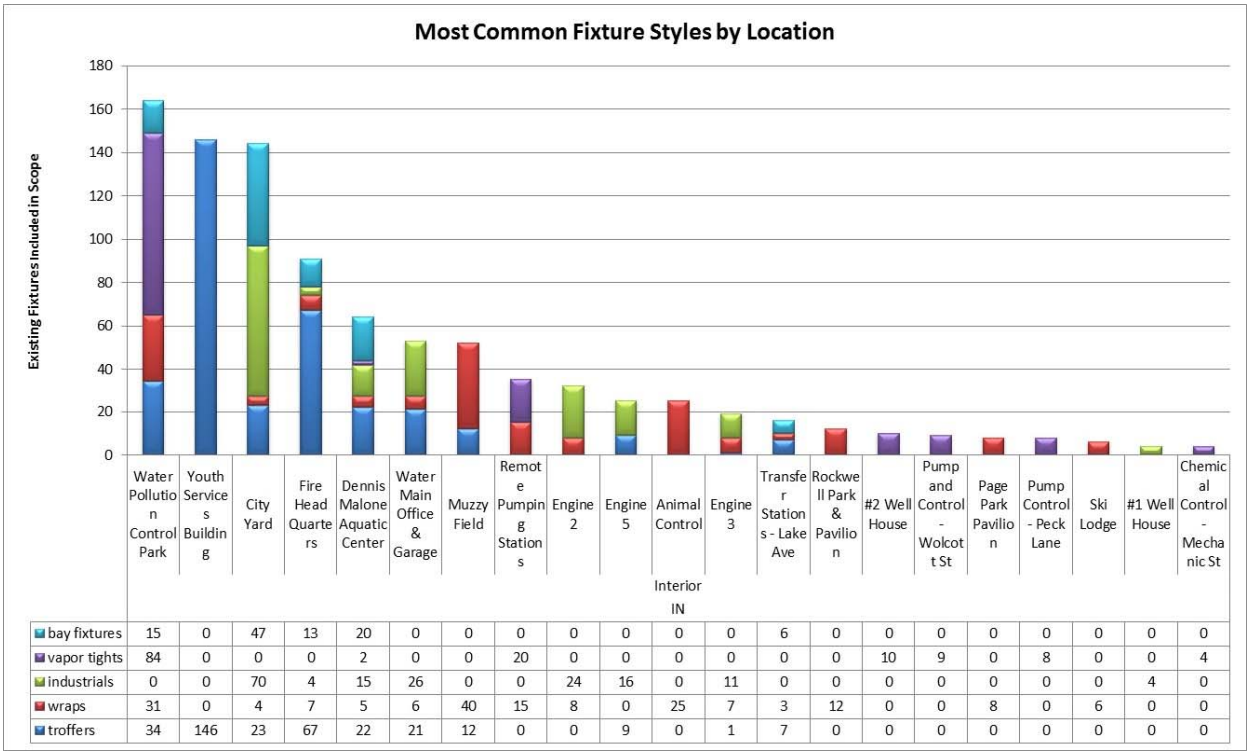
The remaining 3% of linear fluorescent fixtures use T12s with magnetic ballasts. Many of these are found in low use storage areas in most buildings. These lamps are not only inefficient, but also noisy due to the age of ballast.

High-intensity discharge (HID) lamps are used in stairwells, libraries, and hallways. Color rendition is fair to poor depending on lamp quality and age, which unfortunately can be a characteristic of HID lamps.



"Page content is subject to Confidentiality Restrictions"

Incandescent lamps are installed in 4% of fixtures. Many are used in specialized applications such as libraries, stages, and auditoriums.



Compact fluorescents comprise 13% of the existing fixture total. Many of these are used in recessed cans.

Although the lighting system is generally performing as designed, improvements are possible. Light levels are appropriate in the majority of areas and most fixtures are in good condition. We installed data loggers in key locations to obtain an accurate representation of operating hours.

Proposed System

General Information about the Proposed System

Ameresco will standardize the lighting system where practical, reducing the number of different products the City must purchase, stock and maintain.

There are two options for interior lighting that the City can choose between.

- The "Base" option provides for most fixtures replaced or retrofitted with 4' T8 lamps will receive **Linear Fluorescent 28 watt T8** lamps and instant-start ballasts. This premium combination yields maximum energy savings without sacrificing light output or quality. These **28 watt T8** lamps consume less energy while matching the light output of standard T8's. The **28 watt T8** lamp also maintains light output better than T12 and typical T8 lamps.
    - Fluorescent 28 watt T8 lamps offer 40,000 hour rated life with 5 year warranty.
- The "LED T8" option provides for most fixtures replaced or retrofitted with 4' T8 lamps will receive **LED T8** lamps and instant-start ballasts. This premium combination yields maximum energy savings without sacrificing light output or quality just like the fluorescent T8's. In addition, these **LED T8** lamps offer longer rated lifetimes and an additional year of warranty when paired with new ballasts.

- LED T8 lamps offer 50,000 hour rated life with 6 year warranty.

Ballast outputs were tailored to deliver optimum light levels in each room. The new lighting system is designed to maintain lighting levels, while meeting IESNA standards in affected areas. All recommendations were made with the intent to optimize energy savings without compromising the quality and the level of light output.

Our project replaces or upgrades **18,477** existing fixtures (Base option), and **18,518** existing fixtures (LED T8 option). We consider two adjoining fixtures sharing a ballast to be a single fixture. This method provides a more precise assessment of energy consumption and material inventory, but sometimes results in a lower apparent fixture count.

Following are highlights of the proposed scope, with predominant applications presented first. We then proceed in descending order, with each subsequent item representing a smaller portion of the scope. Please refer to the "Lighting System Analysis" in Appendix I, as this is a complete list of work to be performed. Only locations that appear in that document are included in this project.

Specific Information about the Proposed Base System, by Strategy

11,611 existing fixtures will receive T8 lamps and electronic ballasts.

2,478 existing fixtures will receive T8 lamps, electronic ballasts, and reflectors designed to improve fixture efficiency.

1,574 existing fixtures will receive a customized LED conversion kit for recessed cans which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.

821 existing fixtures will receive a customized LED conversion kit for troffers which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.

806 existing fixtures will receive screw-based LED lamps. They are highly efficient, and with lifetimes up to 50,000 hours, maintenance intervals are greatly extended.

444 existing fixtures shall be replaced with new LED high-bays. These high-performance fixtures will improve light levels & distribution, reduce shadowing and "hot spots", while savings substantial energy. Additional benefits of LED over HID sources are improved color rendition, better lumen maintenance, and reduced color shift over lamp life. Further, HID's need time to re-strike when hot, whereas LED fixtures are instant on, allowing us to specify lighting controls in ESM 3 to reduce total operating hours.

286 existing fixtures shall be replaced with new LED drums.

233 existing fixtures will receive new T8 lamps, which are more efficient than the existing lamps.

55 existing fixtures shall be replaced with a new LED flood.

34 existing fixtures shall be replaced with new wraps.

30 existing fixtures shall be replaced with new LED indirects.

27 existing fixtures shall be replaced with new strips.

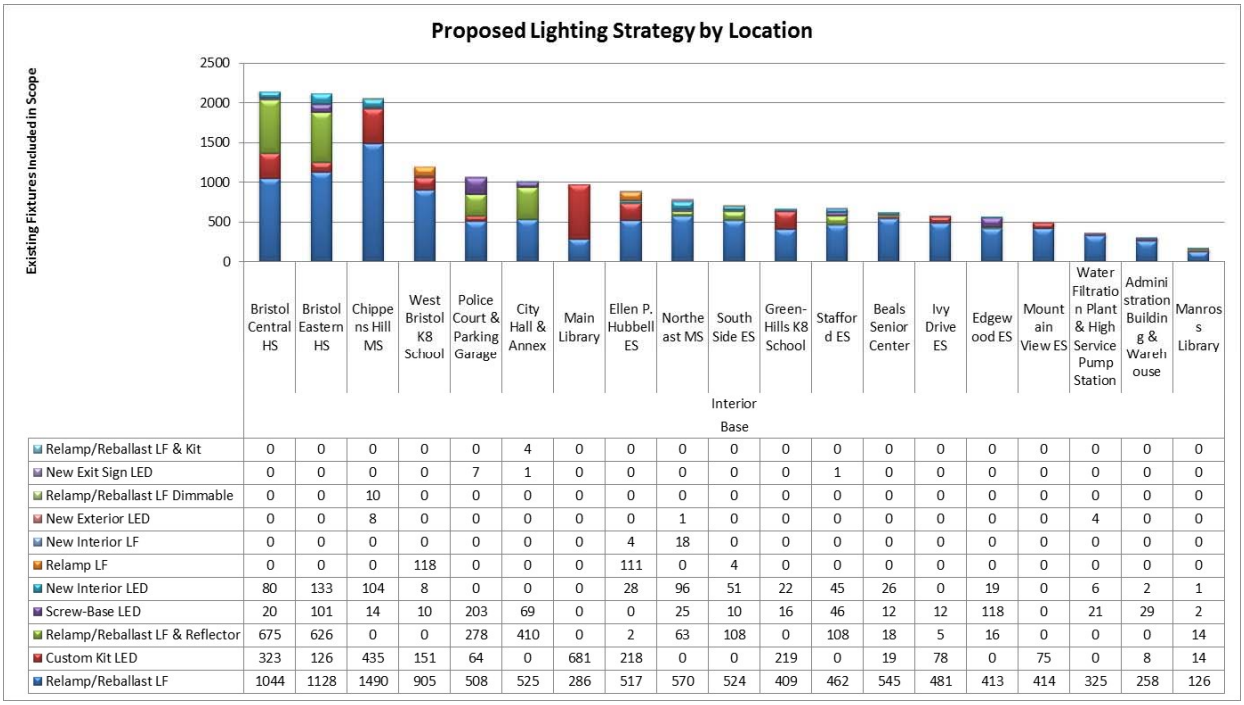
"Page content is subject to Confidentiality Restrictions"

16 existing fixtures will receive a customized LED conversion kit designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.

14 existing fixtures shall be replaced with a new LED canopies.

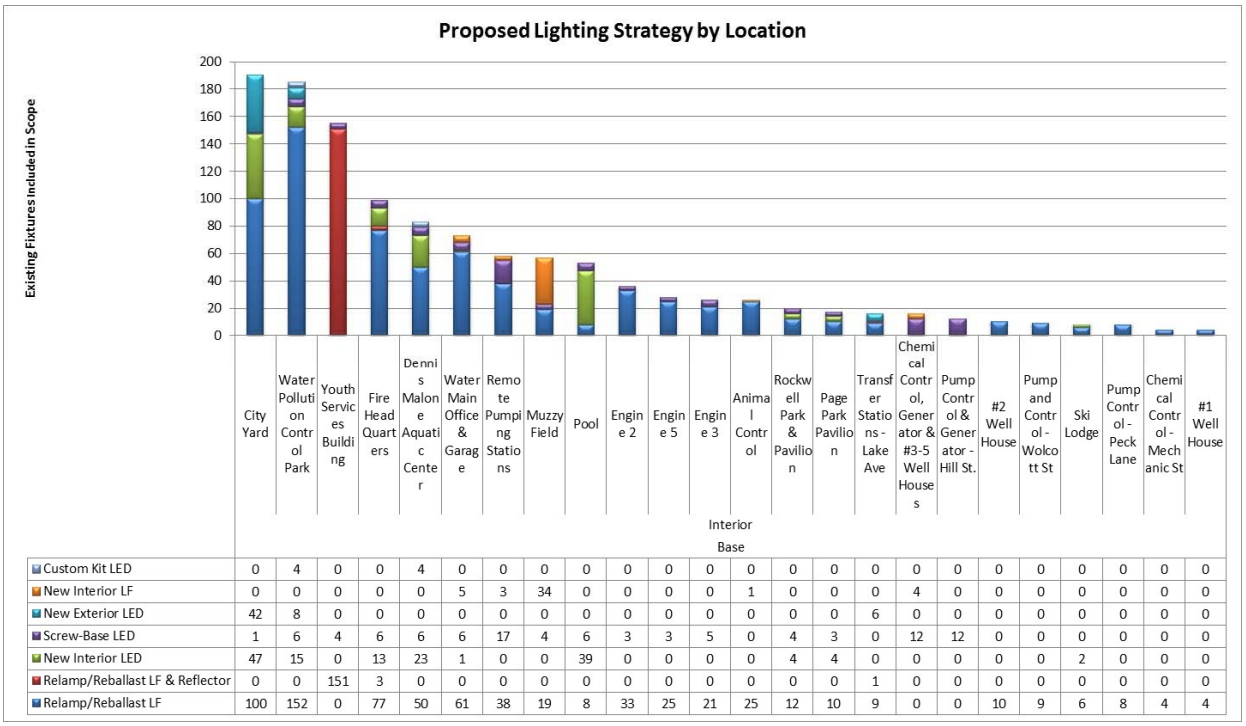
10 existing fixtures will receive T8 lamps and electronic ballasts that dim the lights when there is sufficient daylight to offset the artificial light.

9 existing fixtures shall be replaced with new LED exit signs. Due to their constant operation, exit signs are one of the best applications of LED technology. Fluorescent exit signs consume about 14 watts per sign and have a rated lamp life of 10,000 hours, so they must be re-lamped every 1 to 1½ years; incandescent exit signs consume about 20 to 40 watts per sign and have a rated life of 2,000 hours and must be re-lamped four to five times per year. LED exit signs consume a few watts per sign and have a rated life of 5+ years.



9 existing fixtures shall be replaced with a new LED track head.

8 existing fixtures will receive a customized LED conversion kit for exterior area fixtures which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.



5 existing fixtures shall be replaced with new vanities.

4 existing fixtures will receive T8 lamps, electronic ballasts, and retrofit kits.

3 existing fixtures shall be replaced with new vaportights.

Specific Information about the Proposed LED T8 System, by Strategy

11,113 existing fixtures will receive LED lamps and electronic ballasts.

3,005 existing fixtures will receive LED lamps, electronic ballasts, and reflectors designed to improve fixture efficiency.

1,574 existing fixtures will receive a customized LED conversion kit for recessed cans which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.

831 existing fixtures will receive a customized LED conversion kit for troffers which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.

806 existing fixtures will receive screw-based LED lamps. They are highly efficient, and with lifetimes up to 50,000 hours, maintenance intervals are greatly extended.

444 existing fixtures shall be replaced with new LED high-bays. These high-performance fixtures will improve light levels & distribution, reduce shadowing and "hot spots", while savings substantial energy. Additional benefits of LED over HID sources are improved color rendition, better lumen maintenance, and reduced color shift over lamp life. Further, HID's need time to re-strike when hot, whereas LED fixtures are instant on, allowing us to specify lighting controls in ESM 3 to reduce total operating hours.

286 existing fixtures shall be replaced with new LED drums.

245 existing fixtures will receive new linear LED lamps, which are more efficient than the existing lamps.

55 existing fixtures shall be replaced with a new LED flood.

"Page content is subject to Confidentiality Restrictions"

34 existing fixtures shall be replaced with new wraps.

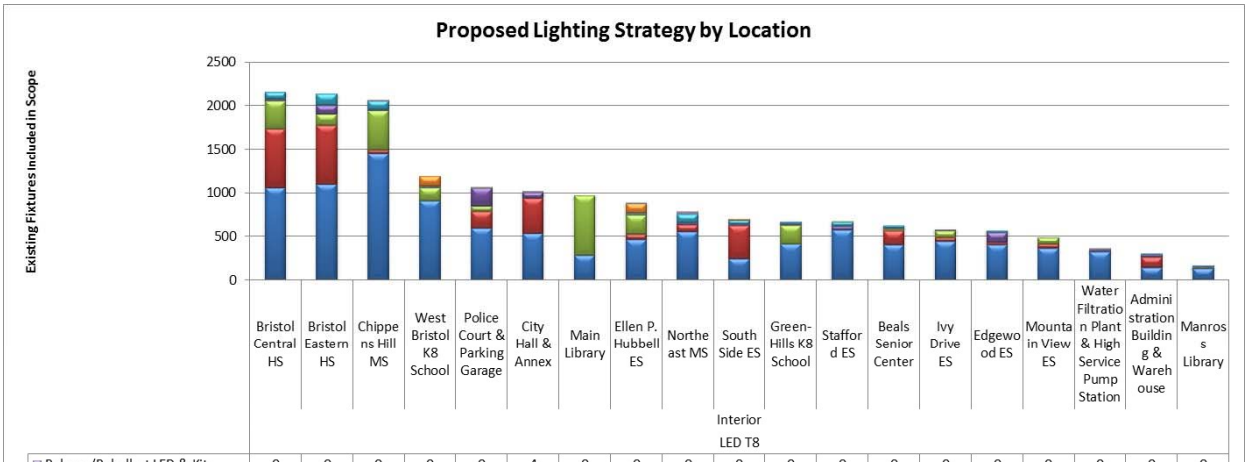
30 existing fixtures shall be replaced with new LED indirects.

27 existing fixtures shall be replaced with new strips.

16 existing fixtures will receive a customized LED conversion kit designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.

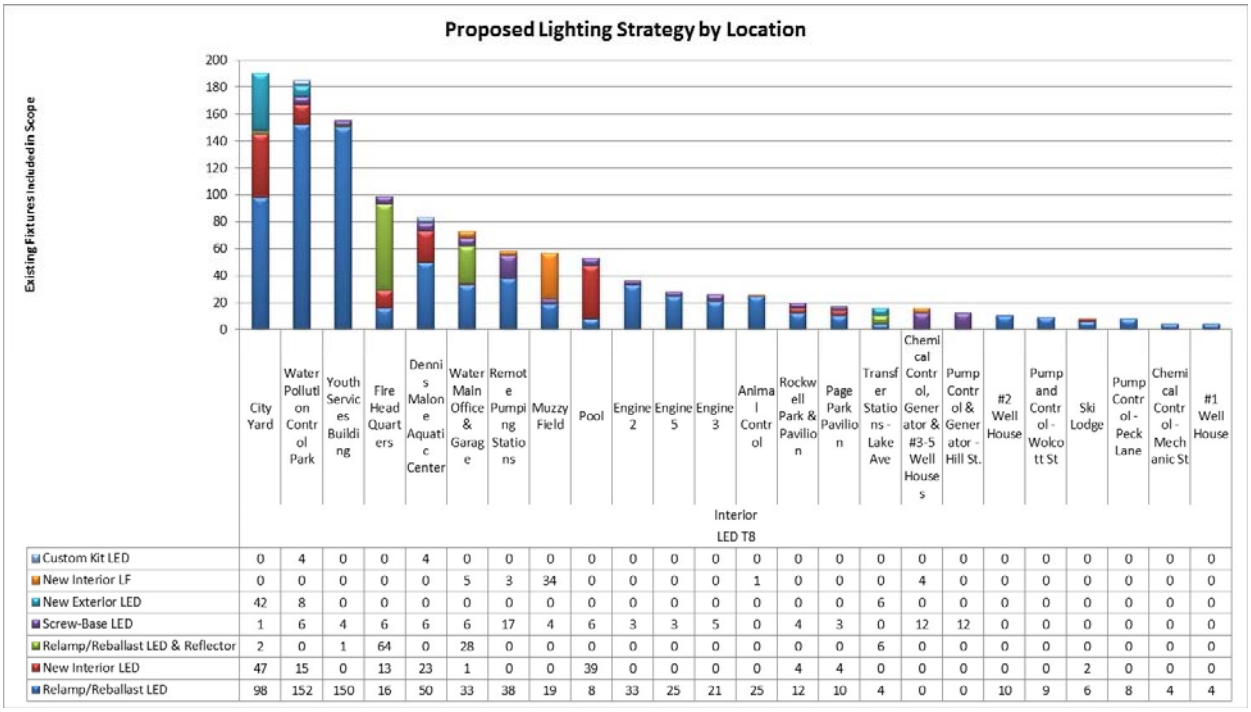
14 existing fixtures shall be replaced with a new LED canopies.

9 existing fixtures shall be replaced with new LED exit signs. Due to their constant operation, exit signs are one of the best applications of LED technology. Fluorescent exit signs consume about 14 watts per sign and have a rated lamp life of 10,000 hours, so they must be re-lamped every 1 to 1½ years; incandescent exit signs consume about 20 to 40 watts per sign and have a rated life of 2,000 hours and must be re-lamped four to five times per year. LED exit signs consume a few watts per sign and have a rated life of 5+ years.



9 existing fixtures shall be replaced with a new LED track head.

8 existing fixtures will receive a customized LED conversion kit for exterior area fixtures which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.



5 existing fixtures shall be replaced with new vanities.

4 existing fixtures will receive LED lamps, electronic ballasts, and retrofit kits.

3 existing fixtures shall be replaced with new vaportights.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. The lighting system audit completed for each facility will be submitted as the basis for construction. Despite our best efforts, cataloguing every single fixture in every location is extremely difficult. **Therefore, fixtures or areas not listed are excluded from our scope.** Typical examples are low use areas such as closets and crawlspaces, areas inaccessible during the audit, areas to be renovated, high-security locations, and specialty fixtures such as medical or stage lighting. Additionally, if your staff escorted us full-time through a site, we assume that we were shown every location you desire be included in the project. Therefore, areas not visited may not appear in the scope.

The audit will include the existing descriptions, operating hours, and proposed retrofit description. These documents will be submitted for review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions, and submitted in multiple for record.

>Impact on Facility Operations and Performance

All installations will be conducted during normal business hours or after normal operating hours if interruption of functions is anticipated. Installations will be coordinated with appointed personnel.

>Integration of Proposed Equipment with Existing Systems

The new lighting system, and all components thereof, will be fully integrated into the existing lighting systems. We assume the entire lighting and lighting controls systems comply with, but not limited to, the latest codes, the latest standards, local jurisdictions, and work was done in a quality workmanship manner, per

"Page content is subject to Confidentiality Restrictions"

NECA, and other applicable recommend best practices universally accepted throughout the electrical industry. Further we assume that all existing devices, which are defined in NEC, which includes but not limited to switches, outlets, wiring, etc. are in acceptable condition in order to implement our scope as outlined in the contract documents. All existing junction boxes, poles, mounting surfaces and structures are assumed to be in acceptable condition to allow the installation of the products indicated in the scope. Required upgrades to meet safety or other codes, and/or to prepare the location for the installation as described above, can be performed on a time and material basis.

>Environmental Impact

There are no potential adverse environmental impacts associated with this lighting upgrade. During construction, Ameresco will remove, package, and recycle all existing lamps that contain mercury and ballasts that contain PCBs or DEHP according to applicable regulations.

Appendix for ESM 1:
Lighting System Improvements - Interior

I. Energy Savings Calculations

Notes:	
A	Applicable building included in comprehensive energy audit
B	Lighting demand savings {kW} associated with lighting retrofit measures
C	Lighting energy savings {kWh} associated with lighting retrofit measures
D	Estimated percentage of lighting energy transmitted to conditioned space
E	Estimated length of heating season
F	Estimated heating system efficiency, interacted with other measures
G	Resulting heating penalty due to lighting upgrades = [col C] x [col D] x 3,413 x ([col E] / 12) / [col F] / 1,000,000
H	Estimated percentage of space cooled
I	Estimated Length of cooling season
J	Estimated cooling system efficiency, interacted with other measures
K	Resulting cooling benefit due to lighting upgrades = [col C] x [col D] x 3,413 x ([col I] / 12) / [col J] / 1,000,000

Notes:	
A	Applicable building included in comprehensive energy audit
B	Lighting demand savings {kW} associated with lighting retrofit measures
C	Lighting energy savings {kWh} associated with lighting retrofit measures
D	Estimated percentage of lighting energy transmitted to conditioned space
E	Estimated length of heating season
F	Estimated heating system efficiency, interacted with other measures
G	Resulting heating penalty due to lighting upgrades = [col C] x [col D] x 3,413 x ([col E] / 12) / [col F] / 1,000,000
H	Estimated percentage of space cooled
I	Estimated Length of cooling season
J	Estimated cooling system efficiency, interacted with other measures
K	Resulting cooling benefit due to lighting upgrades = [col C] x [col D] x 3,413 x ([col I] / 12) / [col J] / 1,000,000

OCTRON® 800 XP® SUPERSAVER® ECOLOGIC®3

EXtended Performance Fluorescent Lamps

The OCTRON 800 XP SUPERSAVER T8 fluorescent offering includes a full complement of lengths and wattages, ensuring there is an energy-saving lamp to satisfy nearly all applications. These lamps operate on standard T8 instant start systems and provide up to 22 percent energy savings over 32 Watt lamps. At 11¢/kWh and 4000 hours of operation per year, the 22 percent energy savings translate to a savings of $12.32 per fixture per year for a 4-lamp fixture. The initial lumen output, lumen maintenance and high color rendering of the OCTRON 800 XP SUPERSAVER/ECO3 lamps help ensure that lighting quality is maintained while energy is saved. These lamps pass the Federal TCLP test, classifying them as non-hazardous waste in most states and feature lead-free glass, bases and manufacturing process, reducing overall environmental impact.

For optimal performance and system warranty, pair with QUICKTRONIC® electronic ballast systems.

Key Features & Benefits

- Energy savings compared to standard 32W T8 lamp
  - 22% with the 25W XP/SS
  - 12% with the 28W XP/SS
  - 6% with the 30W XP/SS
- 94% mean lumens
- Lead free
- Made in the USA
- Dimmable (see application note 5)
- TCLP and RoHS compliant
- Meets CEE Standards
- Retrofit lamp for existing T8 instant start systems
  - 40,000 hours rated life @ 12 hours per start
- Increased life on SYLVANIA QUICKTRONIC® PROStart® PSX and PSN programmed rapid start ballasts
  - 42,000 hours rated life @ 12 hours per start
- QUICK 60+® system warranty when lamps are paired with QUICKTRONIC electronic ballasts

SYLVANIA OCTRON ECOLOGIC3 T8 fluorescent lamps pass the Federal Toxic Characteristic Leaching Procedure (TCLP)[1] criteria for classification as non-hazardous waste in most states[2].

ECOLOGIC3 represents a more comprehensive approach to sustainability encompassing high efficiency, long life and RoHS/TCLP compliance.

1. TCLP test results are based on NEMA LL Series standards and are available on request.
2. Lamp disposal regulations may vary; check your local & state regulations.

MADE IN USA

LEAD-FREE

RoHS compliant
This light source meets restrictions on hazardous substances.

Application Information

Applications

- Cove
- Direct/indirect luminaires
- Recessed troffers
- Schools
- Valance

Application Notes

1. FO25, FO28 and FO30 SUPERSAVER lamps are recommended to be used on F32T8 instant start ballast with minimum open circuit voltage of 550V RMS at the lamp.
   a. Electronically ballasted fixture configurations which operate lamps remotely, such as Master/Satellite applications, can cause reduction of lamp open circuit voltage, in the remote fixture, below the minimum required for reliable lamp starting. For more information, please call 1-800-LIGHTBULB and ask for Ballast Technical Assistance or call your fixture manufacturer.
   b. Not recommended to be used: (1) in remotely ballasted fixtures with lamp open circuit voltages below 550V, (2) in air handling fixtures, (3) on low power factor ballasts or (4) inverter operated emergency lighting systems unless any of the above equipment is specifically listed for SUPERSAVER (SS) lamps. Any of the above situations could result in lamp starting and stabilization problems, or system compatibility issues.
2. FO96 SUPERSAVER lamps are recommended to be used on F96T8 instant start ballast with minimum open circuit voltage of 725V.
3. If a 28W SUPERSAVER lamp is exposed to drafts or the ambient temperature falls below 60°F (70°F for 25W), striation (a rhythmic pulsing pattern of light running down the tube) and/or reduction in lamp brightness may occur. While visually disconcerting, neither behavior is damaging to the lamp and removing the cause (draft or temperature) will return the lamp to normal operation.
4. Fixture must conform to ANSI C78.81–2005 requirements for luminaire design.
5. FO96 types are not dimmable. For all other types, contact OSRAM SYLVANIA for approved dimming ballasts.

QUICK 60+® System Warranty (Literature code: ECS140)

Sample Specification

Lamp shall be OCTRON® 800 XP® SUPERSAVER® ECOLOGIC®3 (15W, 21W, 25W, 28W, 30W, 50W, 54W) lamp having medium bi-pin bases or 50W and 54W lamp having single pin bases. Lamp shall be designed to pass the Federal TCLP test in force at the time of manufacture. Lamps shall have initial lumens of (1200, 1925, 2500, 2725, 2850, 5400, 5700), mean lumens of (1130, 1810, 2325, 2560, 2680, 5075, 5360) and a correlated color temperature of (3000, 3500, 4100) Kelvin. Lamp shall have an average rated life of (24,000, 40,000, 42,000) on (instant start, programmed rapid start) ballasts, 94% or 96% lumen maintenance at 40% of rated life and a CRI of (85, 81). The OCTRON XP SUPERSAVER ECOLOGIC3 lamp shall be operated on QUICKTRONIC® electronic, high frequency ballasts with complete system warranty from the manufacturer covering lamps and ballast.

QUICKTRONIC® T8 Instant Start Universal Voltage Systems

NEMA Premium

RoHS compliant

Type CC
Lamp Striation Control
Low Ballast Factor

High Efficiency Series

QHE T8 ISL CC

Lamp / Ballast Guide

32W T8 – OCTRON® lamps
1-lamp QHE1x32T8/UNV-ISL-SC-1
2-lamp QHE2x32T8/UNV-ISL-SC-1
3-lamp QHE3x32T8/UNV-ISL-SC-1
4-lamp QHE4x32T8/UNV-ISL-SC-1
Also operates:
FBO32, FBO31, FO25, FBO24, FO17, FBO16, FO30/SS (30W), FBO30/SS (30W), FBO29/SS (29W), FO28/SS (28W) & FO25/SS (25W)
Display lamps:
FO13, FO14, FO21 & FO28
Preheat lamps:
F15T8, F25T8 & F30T8
F40T8 operation:
1 lamp on 2L ballast; 2 lamps on 3L ballast; 3 lamps on 4L ballast

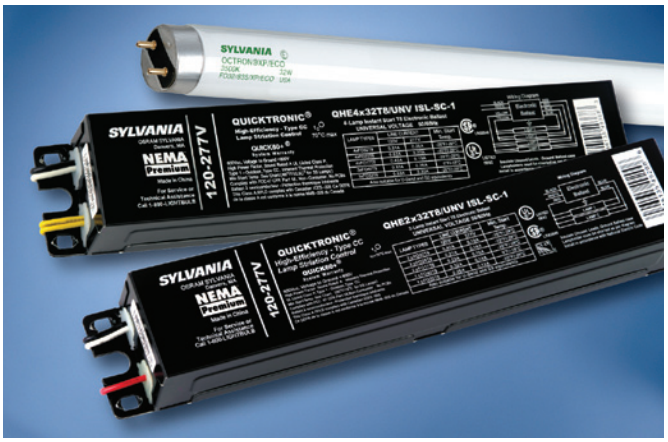
Key System Features

- High Efficiency Systems over 90% efficient
- NEMA Premium Electronic Ballast Program compliant
- **UL Type CC Rated** (Commercial Cabinet)
- **Lamp Striation Control (LSC)**
- Min. Starting Temp:
  - -20°F(-29°C) for T8 lamps
  - 60°F (16°C) for Energy Saving T8 lamps
  - 0°F (-18°C) for FO40T8 lamps
- Flexible De-Lamp Combinations — see wiring diagrams on next page
- 30-50% Energy savings
- RoHS compliant
- Lead-free solder and manufacturing process

Application Information

SYLVANIA QUICKTRONIC High Efficiency (QHE) ballasts are ideally suited for:

UL Type CC
- Refrigerated cases*
- Walk-in coolers*
- Commercial cabinets
- Display cases
- Applications that could expose lamp and sockets to vibration and potential movement



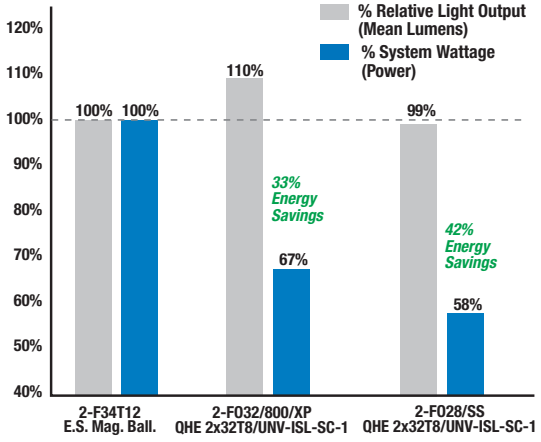
*T8 energy saving lamps should not be used in applications below 60°F lamp ambient.

Lamp Striation Control, (LSC)
- General lighting applications where energy saving T8 lamps may striate, particularly for the F25 energy saving T8 lamps.

SYLVANIA QUICKTRONIC High Efficiency, (QHE) Type CC energy saving electronic T8 ballasts offer **four** major advantages:

1. **Same Light, Less Power!**
   - **Up to 6% in energy savings** compared to standard T8 low power electronic ballasts without compromising light output
   - **Maximum energy savings** when compared to F40T12 magnetically ballasted systems
2. **UL Type CC compliant:** ballasts utilize a micro-controller based circuit to reduce arcing caused by loose connections or improper lamp pin to socket connections.
3. **Lamp Striation Control (LSC):** T8 energy saving lamps should be operated above 60°F, but under certain conditions the lamps may striate. LSC circuitry may minimize or eliminate this condition; however there are limited applications where LSC circuitry may not entirely mitigate lamp striations. (Please consult lamp manufacturers for additional details.)
4. **NEMA Premium Electronic Ballast Program compliant.** The program promotes the use of high efficiency T8 electronic ballasts by meeting or exceeding the Ballast Efficiency Factors, (BEF) established by the CEE, (Consortium for Energy Efficiency). For additional information on this program go to: ***www.cee1.org or www.nema.org***

These ballasts are also RoHS compliant and feature lead-free solder and manufacturing process.



System Information

SYLVANIA QUICKTRONIC High Efficiency (QHE) System advantages:

- Operate from 120V through 277V
  - Eliminates "wrong voltage" errors
  - Reduces inventory by 50%
- Utilizes Instant Start operation for
  - Highest System Efficacy
  - Low temperature starting capability
  - Parallel circuity - keeps remaining lamps lit if one or more go out
- Very low harmonic distortion (<10%)THD
- Operate at >42 kHz to reduce potential interference with infrared control systems

System Type (2 lamp)	Input Power (W)	Initial System Lumens	System Efficacy (lm/W)	Mean System Lumens	Relative Mean Light Output	% Energy Savings

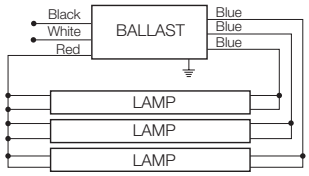
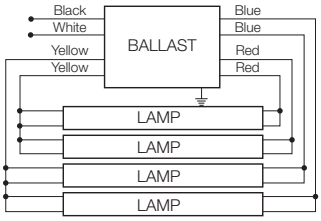
Banded Pack contains 10 pieces, (add "-B" to Description).
1 Ballast Efficiency Factor (BEF) shown = (Ballast Factor x 100) divided by Input Power (Note: calculation based on lowest wattage value).



QUICKTRONIC 1x32

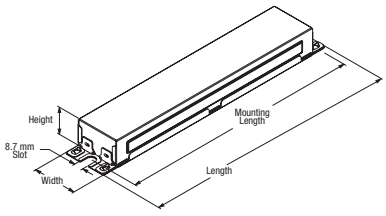


Note: For one lamp application, cap any blue lead. Insulate to 600 volts.

QUICKTRONIC 2x32

Note: For two lamp application, cap any blue lead. For one lamp application, cap any two blue leads. Insulate to 600 volts.

QUICKTRONIC 3x32



Note: For three lamp application, cap any unused blue lead. For two lamp application, cap two blue leads individually. For one lamp application, cap two blue leads, one red and one yellow lead individually. Insulate to 600 volts.

QUICKTRONIC 4x32

Dimensions:
Overall: 9.5" L x 1.68" W x 1.18" H
Mounting: 8.90"

Product Weight:
1.6 lbs each (approx.)

Wiring:
Leads only (no connectors provided)

Performance Guide

Data based upon SYLVANIA OCTRON® lamps shown. QUICKTRONIC® QHE Instant Start ballasts are also compatible with other manufacturers equivalent lamp types that meet ANSI specifications.

QHE Instant Start ballasts will also operate F17, F25, F32 and the U-Bend equivalent & energy saving T8 lamps. Complete performance data is available in the QUICKSYSTEMS section of the SYLVANIA Ballast Technology & Specification Guide.

Specifications

Data based on F32T8

Starting Method: Instant Start
Ballast Factor: 0.77
Circuit Type: Parallel
Lamp Frequency: >42 kHz
Lamp CCF: Less than 1.7
Starting Temp:[2]
-20°F (-29°C) for OCTRON T8 lamps;
60°F (16°C) for SUPERSAVER® T8 lamps
0°F (-18°C) for FO40T8
Input Frequency: 50/60 Hz
Low THD: <10%
Power Factor: >98%
Voltage Range: ±10% of 120-277V rated line (108-305V)
UL Listed Class P, Type 1 Outdoor

UL Type CC Rated
CSA Certified
70°C Max Case Temperature
FCC 47 CFR Part 18 Non-Consumer
Class A Sound Rating
RoHS Compliant[3]
ANSI 62.41 Cat. A Transient Protection
GFCI compatible
Emergency ballast compatible
Remote Mounting (Max. wire length from ballast case to lampholder):
- 20 ft: full wattage T8s
- 10 ft: energy saving T8s
- 4 ft: 25W energy saving T8s

2 Operation below 50°F (10°C) may affect light output or lamp operation – see "Low Temp. Starting" definition.

3 Complies with European Union Restriction of Hazardous Substances Directive (Directive EC 2002/95)

System Life / Warranty

QUICKTRONIC products are covered by the QUICK 60+® warranty, a comprehensive lamp and ballast system warranty. For additional details, refer to the QUICK 60+ warranty bulletin.

the system solution®

Easily upgrade to LED from fluorescent.

PHILIPS INSTANTFIT LED T8 LAMPS

Philips InstantFit LED T8 Lamps are an ideal energy saving choice for existing linear fluorescent fixtures.

Perfect for a wide range of applications

- Full light output in spaces with temperatures down to -4˚F (-20˚C)
- Perfect for applications with frequent "on/off" switching cycles
- Buildings that desire to be mercury free

Easy to experience

- Instant on, no flicker or buzz
- Fits into existing linear fixtures
- Optimized performance with Instant Start Ballasts[1]
- Compatible with select Program Start Ballasts[1]
- Eliminates the need for rewiring and allows the fixture to maintain original UL and CSA compliance[2]

Energy savings

- 41% energy savings vs F32T8 electronic instant start systems[3]

Sustainable lighting solution

- No mercury allowing for non-hazardous waste disposal
- Emits virtually no UV rays or IR
- Glass-free for use in food areas and refrigerated food displays
- 5 year limited warranty[4]

Easily upgrade to LED from fluorescent.

PHILIPS INSTANTFIT LED T8 LAMPS

Philips InstantFit LED T8 Lamps are an ideal energy saving choice for existing linear fluorescent fixtures.

Perfect for a wide range of applications

- Full light output in spaces with temperatures down to -4˚F (-20˚C)
- Perfect for applications with frequent "on/off" switching cycles
- Buildings that desire to be mercury free

Easy to experience

- Instant on, no flicker or buzz
- Fits into existing linear fixtures
- Optimized performance with Instant Start Ballasts[1]
- Compatible with select Program Start Ballasts[1]
- Eliminates the need for rewiring and allows the fixture to maintain original UL and CSA compliance[2]

Energy savings

- 41% energy savings vs F32T8 electronic instant start systems[3]

Sustainable lighting solution

- No mercury allowing for non-hazardous waste disposal
- Emits virtually no UV rays or IR
- Glass-free for use in food areas and refrigerated food displays
- 5 year limited warranty[4]

Philips - Bodine	LP600STU	1
Philips - Chloride	DEB-6LP	1

1. Philips InstantFit LED T8 and Philips Advance Ballasts have passed internal compatibility tests. Certified compatibility from Philips.
2. Philips InstantFit LED T8 and third party ballasts have passed internal compatibility tests. Certified compatibility from lamp manufacturer only.

* UL, RoHS, CSA and NSF logos applicable to InstantFit products only (9290002840, 9290002841, 9290002842, 9290002862, 9290008964, 9290008965). They do not apply to listed ballasts. Restrictions on Hazardous Substances (RoHS) is a European directive (2002/95/EC) designed to limit the content of 6 substances [lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE)] in electrical and electronic products. For products used in North America compliance to RoHS is voluntary and self-certified.

Tested to B50 L70 requirement. For systems using a low (0.78) or normal (0.88 or less) ballast factor, InstantFit lamps are rated for 50,000 hours. For systems using a high ballast factor (greater than 0.88), InstantFit products are rated for 40,000 hours. Based on usage of 12 hrs/day.

Energy Savings based on average wattage for 2 lamp F32T8 Electronic Instant Start System with 0.88 Ballast Factor (58 System Watts) versus average wattage for 2 lamp Philips InstantFit LED T8 system (34 System Watts). 58 - 34 = 24 System Watts Saved. 24/58 = 41.4% Energy Saved. Actual savings may vary depending on type of lamp and ballast used.

Please contact Philips for questions about third party ballasts that are not on this list.

QUICKTRONIC® POWERSENSE® T8 Universal Voltage Dimming Systems

NEMA Premium

RoHS compliant

Fluorescent Controllable Lighting Systems

High Efficiency Series

POWERSENSE T8 DIM

Lamp / Ballast Guide

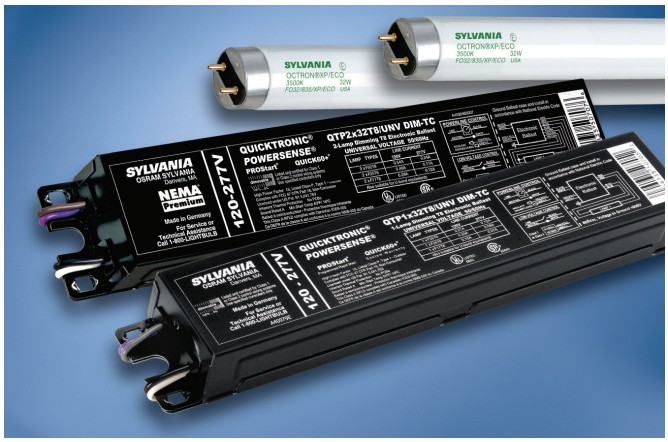
32W T8 - SYLVANIA OCTRON® lamps
1-lamp QTP1x32T8/UNV DIM
2-lamp QTP2x32T8/UNV DIM
3-lamp QTP3x32T8/UNV DIM
4-lamp QTP4x32T8/UNV DIM

Primary Lamp Types
F032, FB032 & FB031

Also operates:
F030/SS, F028/SS, F025/SS, F025, F017, FB024 & FB016

Key System Features

- Industry's first ballast that combines dimming inputs from 0-10V and/or two-wire AC dimming providing maximum flexibility
- Compatible with low voltage and power line fluorescent dimmers
- High Efficiency
- NEMA Premium Electronic Ballast Program compliant
- Lamp Detection Technology
- Universal voltage (120-277V)
- 100 - 5% Dimming Range
- PROStart® Programmed Rapid Start
- Anti-flash circuitry - turns on in dimmed mode
- Operates at >42kHz
- QUICK 60+ ballast and lamp warranty
- RoHS compliant
- Lead-free solder and manufacturing process



Application Information

SYLVANIA QUICKTRONIC POWERSENSE ballasts
are ideally suited for:

- Occupancy sensors
- Daylight harvesting
- Energy management
- Load shedding
- New construction
- Retrofit

SYLVANIA QUICKTRONIC High Efficiency, POWERSENSE T8 electronic ballasts offer several advantages:

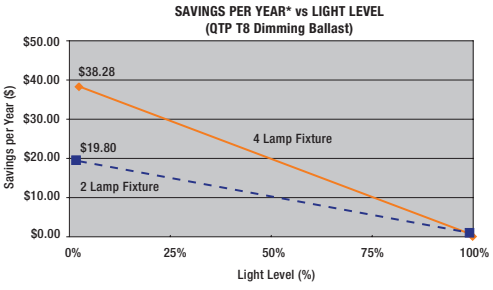
- **Wide Dimming Range:** operate linear fluorescent T8 lamps over a 100-5% dimming range and provide true versatility in controls selection.
- **Industry's Most Adaptable Dimming Ballast:** ballasts feature micro-controller technology for compatibility with:
  - low voltage controls
  - power line fluorescent dimmers
  - any line voltage from 120V to 277V
- **Unmatched Performance:** patented lamp detection technology that virtually eliminates variations in brightness from lamp-to-lamp and provides uniform lighting throughout the dimming range. At light levels of >75% unnecessary lamp-coil power is turned off, delivering energy efficiences comparable to non-dimming Instant start electronic ballast. This technology also eases installation and troubleshooting by recognizing failed lamps, faulty wiring or loose connections, and shutting down.

When the problem is corrected, the system restarts automatically.

- **NEMA Premium Electronic Ballast Program compliant.** This program promotes the use of high efficiency T8 electronic ballasts by meeting or exceeding the Ballast Efficiency Factors, (BEF) established by the CEE, (Consortium for Energy Efficiency). For additional information on this program go to: *www.cee1.org or www.nema.org*

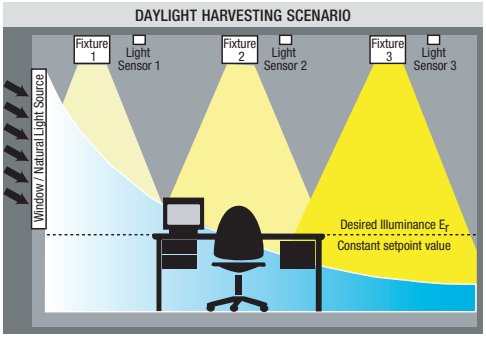
These ballasts are RoHS compliant and feature lead-free solder and manufacturing process.

Setting the standard for quality, QUICKTRONIC POWERSENSE ballasts are covered by the QUICK 60+® warranty, the first and most comprehensive lamp & ballast system warranty in the industry.



System Information

QUICKTRONIC POWERSENSE ballasts operate from standard low voltage (0-10VDC) fluorescent controllers or compatible 2-wire power line fluorescent dimmers, making them ideal for individual office lighting or automated building applications, both in new construction and retrofit projects.



For the individual office or conference room, installation can be streamlined by using a 2-wire power line fluorescent dimmer; eliminating the need for additional control wires.

For more advanced systems, such as daylight harvesting or building automation applications, standard low voltage devices (0-10VDC, Class 1 or 2) are used to control the lighting system. In this daylight harvesting example, each lighting fixture (or fixture row) is controlled by it's own photosensor; regulating the light output to compensate for changes in natural daylight. Depending upon the specific application, energy savings of up to 60% compared to fixed output T8 electronic systems can be realized.

All QUICKTRONIC POWERSENSE ballasts include a line voltage protection circuit, which protects the ballast in the event that line voltage is inadvertently applied to the low voltage control inputs.

* F032/XP lamps with QUICKTRONIC T8 POWERSENSE ballast
* Based on 4000 hrs/yr, $0.11/kWh, and 120V operation
* Savings per Year (@Light Level) = Cost of operation (100% Light Level) - Cost of operation (@Light Level)

Controls Guide

Warning

Install and wire these ballast and controls in accordance with the National Electrical Code (NEC), all applicable Federal, State and local electrical codes, as well as the specific instructions provided with the compatible control that you purchased. Installation should be performed by qualified personnel only.

These instructions are guidelines only. Installation may vary for different controls/ fixtures/applications. Be sure to follow the control instructions and all applicable codes and standards when installing dimming systems.

Please contact controls manufacturer listed in the OSRAM SYLVANIA Inc. controls cross reference for compatible controls and instruction wiring.

NOTES:

1. Dimming ballasts source < 0.5mA (0-10VDC control input).
2. Powerline controls must be rated for the type (e.g. Fluorescent Phase-control) and size (e.g. 600W, 1000W, 1500W & 2000W etc.) of the connected load. Do NOT use incandescent powerline controls; incandescent dimmers are not rated for fluorescent loads and are NOT compatible with POWERSENSE ballasts.

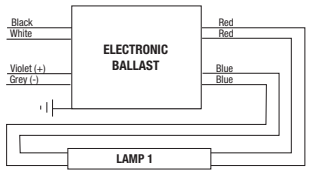
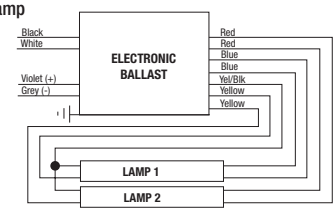
Products are all 10-pack. **Striation might occur with SUPERSAVER lamps.*



1: System Efficacy calculation based on lowest input power value.

2: Ballast Efficiency Factor (BEF) shown = (Ballast Factor x 100) divided by Input Power (Note: calculation based on lowest wattage value).



Wiring Diagrams

Output Wiring: Lamp wiring for dimming ballasts can differ significantly from non-dimming ballasts and from other manufacturers dimming ballasts. Take care to connect lamp lead wires as shown on the applicable ballast diagram. **Lamp Seasoning:** For optimal performance, fluorescent lamps may require seasoning for up to 12 hours prior to low temperature starting & low level dimming. Refer to NEMA LSD 23-2002 Lighting Systems Division: Recommended Practice — Lamp Seasoning for Fluorescent Dimming Systems

Performance Guide

Data based on SYLVANIA OCTRON® lamps shown. QUICKTRONIC® POWERSENSE ballasts are also compatible with other manufacturers equivalent lamp types that meet ANSI specifications, including F17, F25, F32, U-Bend equivalent lamps and SUPERSAVER lamps.

Specifications

Data based on F32T8

Starting Method: Programmed Rapid Start
Circuit Type: Series
Lamp Frequency: >40 kHz
Lamp CCF: Less than 1.7
Starting Temp: 50°F/10°C minimum for OCTRON T8 lamps
Input Voltage: 120-277V, ±10%
Input Frequency: 50/60 Hz
THD: <10% @ Full Output
Power Factor: >98% @ Full Output
UL Listed Class P, Type 1 Outdoor
CSA or C/UL Certified
70°C Max Case Temperature
FCC 47CFR Part 18 Non-Consumer Class A Sound Rating
RoHS compliant[3]
ANSI C62.41 Cat. A Transient Protection
Remote mounting (Max. wire length from ballast case to lampholder)

- up to 8ft for full wattage T8s
- no remote mounting for SUPERSAVER

3 Complies with European Union Restriction of Hazardous Substances Directive (Directive EC 2002/95)

Control Information

QUICKTRONIC POWERSENSE ballasts are compatible with a wide range of low voltage (0-10VDC) and power line fluorescent controllers available from various manufacturers.
Low Voltage Control Specs: Ballast will source up to 0.5mA for 0-10VDC control purposes. May be wired as a Class 1 or Class 2 circuit-consult Local and National Electrical Codes.
Power Line Control Specs: Specification-grade fluorescent controls are available for 120V or 277V operation of controllable analog electronic fluorescent ballasts. Controls must be suitably rated for both the type (e.g. Fluorescent Phasecontrol) and size (e.g. 600W) of the connected load.

System Life / Warranty

QUICKTRONIC products are covered by the QUICK 60+® warranty, a comprehensive lamp and ballast system warranty. For additional details, refer to the QUICK 60+ warranty bulletin.

VOLTAGE TYPE JOB SERIES

SPECIFICATIONS

- HOUSING — 22-gauge die-formed C.R.S.
- REFLECTIVE SURFACES — Highly-specular, multi-faceted aluminum reflector standard, 92% average reflectance white powder coat reflector optional.
- SHIELDING — Self-captive extruded clear acrylic prismatic diffuser with 30% DR high-impact additive.
- FINISH — 92% minimum average reflective white powder coat with multi-stage iron/phosphate prepared metal.
- ELECTRICAL — Electronic ballast standard, instant start T8, rated Class P.
- LABELS — UL/CUL listed as fluorescent luminaire suitable for dry or damp locations.
- MOUNTING — Surface or suspended.

FEATURES

- Over 90% efficient.
- Highly-specular multi-faceted reflector provides wide distribution for uniform illumination.
- Balanced fixture requires only two mounting points for all lamp configurations.
- Individual or continuous row mounting.
- Available in 2 ft., 4 ft., and 8 ft. lengths.
- Diffuser may be replaced without the use of tools.
- Wireway is accessible without the use of tools.
- Ballast secured by two captive bolts and nuts to ensure a tight, reliable fit for maximum heat dissipation and minimal ballast noise.
- All parts painted after fabrication to facilitate installation, increase efficiency, and inhibit corrosion.
- This fixture is proudly made in the USA.

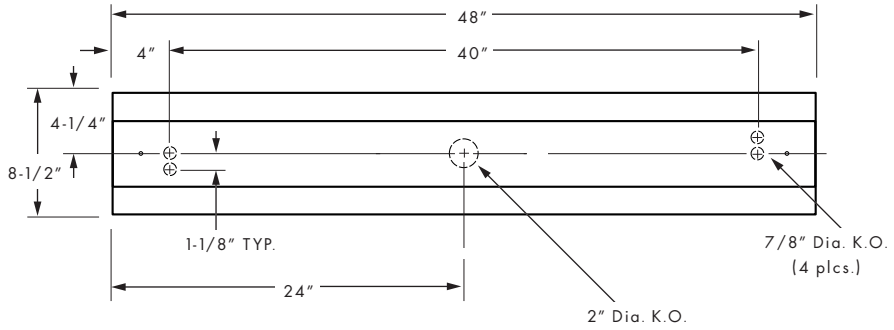
TYPICAL CLASSROOM INSTALLATION



1-lamp cross section EW-4-132-A-EB1
30′ x 30′ room, 9′ ceilings, 80/50/20 reflectances
Three 24′ rows, 10′ on center, Electronic ballast,
1.18 ballast factor, Workplane height = 2.5′

Average = 52 FC
Maximum = 68 FC
Minimum = 28 FC
Max. to Min. = 2.4
Watts per sq. ft. = 0.78

MOUNTING

Back punching of 8′ fixture consists of duplicate 4′ punchings.

Footnotes:
[56] Must specify voltage.

Accessories (order separately)

FBX CHAIN KIT – 54" chains & V brackets
FBX-GRIP5 – 5' cables & V brackets
FBX-GRIP10 – 10' cables & V brackets
FBX-PENHGR – Pendant hanger (Not available for 36,000 or 45,000 lumen versions)
WG-FBX-2N – Wire guard for 8,000 and 12,000 lumen versions
WG-FBX-2W – Wire guard for 16,000, 20,000, and 24,000 lumen versions
WG-FBX-4 – Wire guard for 36,000 and 45,000 lumen versions

Wiring Notes

Standard cords have 3 wires. Consult factory for other cord options.

General Notes

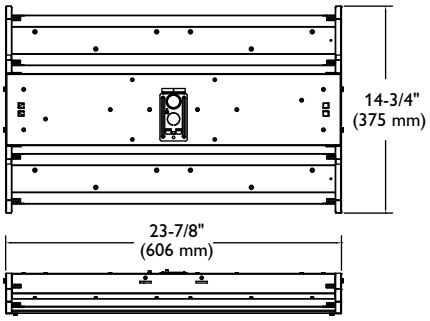
All options factory installed.
All accessories are field installed.
Many luminaire components, such as reflectors, refractors, lenses, sockets, lampholders, and LEDs are made from various types of plastics which can be adversely affected by airborne contaminants. If sulfur based chemicals, petroleum based products, cleaning solutions, or other contaminants are expected in the intended area of use, consult factory for compatibility.

Predicted L_{70} Lifetime

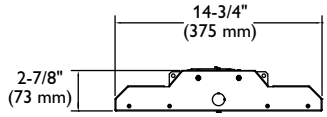
40°C Ambient > 100,000 hours
40°C Ambient = 60,000 hours (for 8Klm and 16Klm)
(based upon LED manufacturer's supplied LM-80 data and in-situ laboratory testing)

PHILIPS Day-Brite
PHILIPS CFI

LED HIGH BAY
FBX

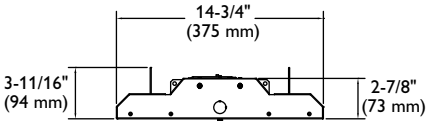


Application



- This luminaire can be used to illuminate retail, cold storage, manufacturing, warehousing and many other large indoor spaces with control and precision.

Construction & Features



- Metal housing and reflectors provide excellent thermal transfer to extend component life.
- End holes to attach V bracket for chain or cable hanging.
- May be cable, chain, or pendant mounted.
- 7/8" K.O. at each end of luminaire for wiring or motion detector.
- Polyester powder finish for excellent impact and corrosion resistance.
- LED light engines and drivers are field replaceable.
- 5 Year Limited Warranty.
- Components are RoHS compliant.
- Listed by ETL to meet UL 1598 standards for damp location and -35°C to 40°C ambient. High ambient 55°C is optional.
- Dimming drivers are standard. Control is 0-10V DC.
- Optional motion detector.
- DLC Listing for most variations. Please check the DLC Qualified Products List to confirm (www.designlights.org/QPL).

Photometry

LED High Bay FBX, General Distribution, 24,000 nominal delivered lumens

Catalog No.	FBX24LL40-UNV
Test No.	32714
S/MH	1.3
Lamp Type	LED
Lumens	22,277
Input Watts	197
Efficacy	113

Comparative yearly lighting energy cost per 1000 lumens – **$2.12** based on 3000 hrs. and $.08 pwr KWH.

The photometric results were obtained in the Philips Day-Brite laboratory which is NVLAP accredited by the National Institute of Standards and Technology.

Photometric values based on test performed in compliance with LM-79.

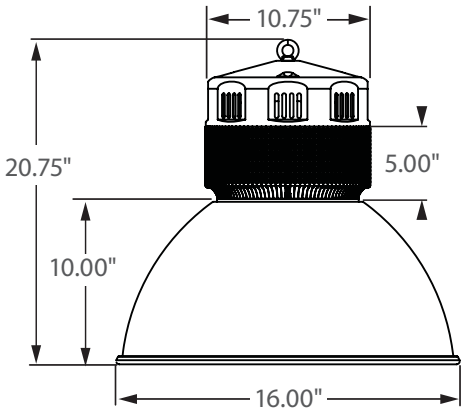
NEPTUN LIGHT

LED
16" POLYCARBONATE LOW BAY FIXTURES



Please check latest update for complete information.
http://www.designlights.org/solidstate.about.QualifiedProductsList_Publicv2.php

** AVAILABLE **

Bi-Level 100% | Dimming 50%

0 - 10V FULL DIMMING

Incredible 75,000 hrs

GENERAL DESCRIPTION

Neptun's LED Polycarbonate Low-Bay fixtures combine classic form and versatility to make it an excellent choice for new construction or retrofit applications. The polycarbonate refractor offers excellent optics with horizontal and vertical footcandles. The 16" housing is offered in a variety of wattages to provide maximum flexibility in all types of applications. It can replace existing HID & HPS fixtures up to 250W.

APPLICATION

- Retail Lighting
- Showroom Lighting
- Grocery Store Lighting
- Area & Storage Lighting

STRUCTURE, MATERIALS, & FEATURES

- 16" High Efficiency, heat and impact resistant, UV protected, non yellowing, polycarbonate refractor.
- Corrosion resistant die-cast aluminum gear box with electrocoat finish.
- High Output COB LED's.
- High power factor, low THD driver with 10kV Surge Protection.
- High performance Thermal Management system.
- Instant-On flicker-free Cold Start and Hot Re-Start.
- Bright white light (5000˚K) for greater visibility and safety.
- Up to 15 year maintenance free operation.
- 5 Year Warranty on complete fixture. (LED's, Driver, & Housing)
- **Optional**: Bi-Level Dimming, 0-10V Dimming, Wi-Fi Control, Remote Monitoring and ON/ OFF Control

ORDERING INFORMATION

SPECIFICATIONS

- Driver ..... Constant Current
- Start Method ..... InstantON
- Hot Re-start ..... InstantON
- Power Supply 350mA
- Driver UL Rating ..... Class 1
- Driver UL Outdoor Rated ..... Wet Location
- Sound Rating ..... Class A
- ANSI Surge Protection ..... IEEE C62.41 C High
- Driver Off-State Draw ..... 0 Watts
- Universal Input Line Voltage ..... 120-277 VAC
- Input Line Frequency ..... 50/60 Hz
- Projected (L70) @ 25°C ..... > 100,000 hrs.
- Color Temperature ..... 5,000°K
- Color Rendering Index (CRI) ..... > 80
- Minimum Starting Temperature ..... -40°C
- Maximum Starting Temperature ..... +50°C
- Lumens per Watt ..... > 90
- Shock / Vibration Resistant ..... Yes
- Power Factor ..... > 0.90
- Total Harmonic Distortion ..... < 20%
- Inrush Current Peak ..... < 10 Amp
- FCC Compliance ..... Part 15, Subp. C
- ETL Listed / UL Standard 1598 ..... Yes
- Housing IP Rating IP43
- Driver IP Rating IP67
- Warranty ..... 5 Year

SEEX LED Exit Sign

Emergensee Light

LISTED

Features

- Compact, low-profile design in neutral finish
- Energy-efficient LED technology
- EZ snap-out chevron directional indicators
- UL listed for damp locations & meets UL924, NFPA 101 Life Safety Code, NEC, OSHA, Local and State Codes

Electrical

- Dual 120V/277V voltage
- Charge rate/power "ON" LED indicator light and push-to-test switch for mandated code compliance testing
- LVD (low voltage disconnect) prevents battery from deep discharge
- Long-life, maintenance-free, rechargeable NiCd battery (EM model)
- Internal solid-state transfer switch automatically connects the internal battery to LED board for minimum 90-minute emergency illumination
- Fully automatic solid-state, two-rate charger initiates battery charging to recharge a discharged battery in 24 hours.

Mounting

- Universal surface mount, wall or ceiling, with EZ-snap thermoplastic mounting canopy, which snaps into place making installation quick & easy.

Housing

- Injection-molded, engineering-grade, V-0 flame retardant, high-impact, thermoplastic in white or black finish

Options

- SDT: Self-Diagnostic (option SDT) continually diagnoses unit's performance and tests system (auto battery discharge once every 30 days and once every 12 months) to ensure reliable operation and to meet electrical and life safety codes
- DC: Dual Circuit option on the AC-only unit enables it to be connected to two different (primary and secondary, one acting as a back-up for the other) supplies at the same time (contact customer service).

Illumination

- Ultra-bright, energy efficient, long-life Red or Green LED

SALIDA faceplates also available.

Warranty

- Five Year Warranty on all electronics and housing. Batteries are pro-rated warranted for 5 years.

Technical Specifications

Listings

UL Listing:

Suitable for Wet Locations. Covered Ceiling Mount Only.

Dark Sky Approved:

The International Dark Sky Association has approved this product as a full cutoff, fully shielded luminaire.

IESNA LM-79 & LM-80 Testing:

RAB LED luminaires have been tested by an independent laboratory in accordance with IESNA LM-79 and LM-80, and have received the Department of Energy "Lighting Facts" label.

LED Characteristics

Lifespan:

100,000-hour LED lifespan based on IES LM-80 results and TM-21 calculations.

LEDs:

4x13W high-output, long-life LEDs.

Color Consistency:

3-step MacAdam Ellipse binning to achieve consistent fixture-to-fixture color.

Color Stability:

LED color temperature is warrantied to shift no more than 200K in CCT over a 5 year period.

Color Uniformity:

RAB's range of CCT (Correlated Color Temperature) follows the guidelines of the American National Standard for Specifications for the Chromaticity of Solid State Lighting (SSL) Products, ANSI C78.377-2011.

Electrical

Drivers:

2x26W Driver, Constant Current, Class 2, 100V-277V, 50/60 Hz, 6kv Surge Protection, 720mA, 100-277VAC 0.4 Amps., Power Factor 99%.

THD:

13.6% at 120V

Construction

Ambient Temperature:

Suitable for use in 40°C (104°F) ambient temperatures.

Cold Weather Starting:

Minimum starting temperature is -40°F/-40°C.

Thermal Management:

Optimized using computational fluid dynamics software to ensure long LED and driver lifespan.

Housing:

Precision die-cast aluminum housing and lens frame.

Lens:

Clear tempered glass lens.

Gaskets:

High-temperature silicone.

Finish:

Our environmentally friendly polyester powder coatings are formulated for high-durability and long-lasting color, and contains no VOC or toxic heavy metals.

Other

Green Technology:

Mercury and UV Free, and RoHS compliant.

California Title 24:

See CLED52/D10 for a 2013 California Title 24 compliant product. Any additional component requirements will be listed in the Title 24 section under technical specifications on the product page.

Patents:

The design of CLED52 is protected by patents pending in US, Canada, China, Taiwan and Mexico.

Country of Origin:

Designed by RAB in New Jersey and assembled in the USA by RAB's IBEW Local 3 workers.

Buy American Act Compliant:

This product is a COTS item manufactured in the United States, and is compliant with the Buy American Act.

Recovery Act (ARRA) Compliant:

This product complies with the 52.225-21 "Required Use of American Iron, Steel, and Manufactured Goods-- Buy American Act-- Construction Materials (October 2010).

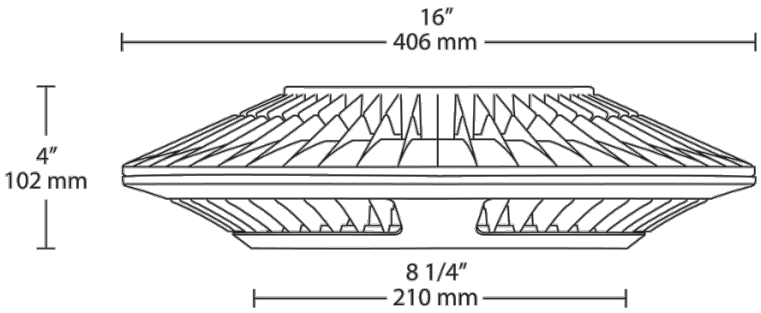
Trade Agreements Act Compliant:

This product is a COTS item manufactured in the United States, and is compliant with the Trade Agreements Act.

GSA Schedule:

Suitable in accordance with FAR Subpart 25.4.

Optical



BUG Rating:

B2 U1 G1

D-Series
LED Surface Canopy

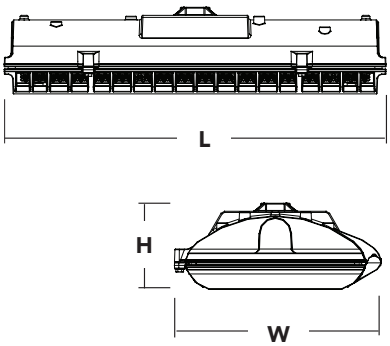
d-series

Catalog Number

Notes

Type

Hit the Tab key or mouse over the page to see all interactive elements.



Specifications

Length: 17-3/4" *(45.1 cm)*

Width: 8-1/2" *(21.6 cm)*

Height: 3-7/16" *(8.7 cm)*

Weight (max): 16 lbs *(7.3 kg)*

Introduction

The D-Series LED Surface Canopy luminaire is ideal for covered walkways or drive-thrus, semi-covered outdoor aisles, and walk-in coolers and freezers. Its five optical choices provide the design flexibility to potentially reduce luminaire counts while still meeting IES criteria, lowering overall energy consumption.

Its expected service life of over 100,000 hours (20 years of nighttime operation) combined with the available motion/ambient sensor offers an extremely low maintenance solution that yields quick payback.

Options

Shipped installed

HS	House-side shield (housing visor) [7]
SF	Single fuse (120, 277, 347V) [8,9]
DF	Double fuse (208, 240, 480V) [8,9]
SPD	Separate surge protection [10]
CFMH	Cover finish matches housing [11]
PIR	Motion/ambient sensor for 8-15' mounting heights [12]
PIRH	Motion/ambient sensor for 15-30' mounting heights [12]
PIR3FC3V	Motion/ambient sensor for 8-15' mounting heights and for typical applications requiring daylight harvesting and Title 24 compliance [12]
PIRH3FC3V	Motion/ambient sensor for 15-30' mounting heights and typical applications requiring daylight harvesting and Title 24 compliance [12]
XAD	XPoint™ Wireless enabled [13]
XADN	XPoint™ Wireless enabled for emergency circuit [13]
XAD PIR	XPoint™ Wireless enabled motion/ambient sensor for 8-15' mounting heights [13,14]
XAD PIRH	XPoint™ Wireless enabled motion/ambient sensor for 15-30' mounting heights [13,14]
XADN PIR	XPoint™ Wireless enabled motion/ambient sensor for emergency circuits for 8-15' mounting heights [13,14]
XADN PIRH	XPoint™ Wireless enabled motion/ambient sensor for emergency circuits for 15-30' mounting heights [13,14]

Shipped separately

BDS	Bird shroud [7]

Finish *(required)*

DWHXD	White
DNAXD	Natural aluminum
DDBXD	Dark bronze

Accessories

Ordered and shipped separately.

DSXSCHS U	House-side shield (1 per light engine)
DSXSCBDSSJ DWHXD U	Bird shroud for SRM on surface J-box only, white (specify finish)

NOTES

1 Available with 700mA or 1000mA option only.
2 Not available with 347 or 480V.
3 AMBPC only available with 530mA or 700mA.
4 DesignLights Consortium qualified.
5 MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120, 208, 240 or 277 options only when ordering with fusing (SF, DF options).
6 N/A with one light engine (10C). Only available with 700mA or 1000mA.
7 Also available as a separate accessory; see Accessories information at left.
8 Single fuse (SF) requires 120, 277 or 347 voltage option. Double fuse (DF) requires 208, 240 or 480 voltage option.
9 Not available with XAD.
10 See the electrical section on page 3 for more details.
11 Available with DNAXD or DDBXD only.
12 PIR & PIR3FC3V specifies the Acuity Controls SBOR 10 ODP motion/ambient sensor, the PIRH & PIRH3FC3V specifies the Acuity Controls SBOR 6 ODP motion/ambient sensor.
13 Dimming driver standard. Not available with 347V or 480V. Not available with fusing.
14 XAD PIR specifies the Acuity Controls XPA SBOR10 wireless controller, the XADN PIR specifies the Acuity Controls XPA SBON10 wireless controller, the XAD PIRH specifies the Acuity Controls XPA SBOR6 wireless controller, and the XADN PIRH specifies the XPA SBON6 wireless controller.

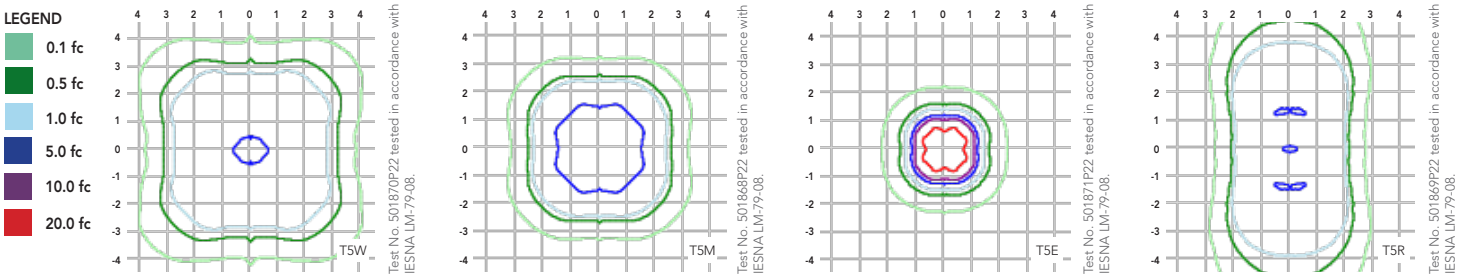
Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the platforms noted in a 25°C ambient, based on 10,000 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.



Operating Hours	0	25,000	50,000	100,000
Lumen Maintenance Factor	DSXSC LED 10C 1000			
	1.0	0.97	0.94	0.90

Motion Sensing

The motion/ambient sensor options (PIR360SS or PIRH360SS) have 360° of passive infrared sensing and adjustable bi-level dimming to save energy when there are no occupants.

Mounting Options

Surface Mounting

FEATURES & SPECIFICATIONS

INTENDED USE

The energy savings, long life, and easy-to-install design of the D-Series LED Surface Canopy luminaire make it the smart choice for canopy lighting in commercial, industrial and institutional applications with mounting heights of 8-15'.

CONSTRUCTION

Two-piece die-cast aluminum housing has integral heat sink fins to optimize thermal management through conductive and convective cooling. Modular design allows for ease of maintenance and future light engine upgrades. The LED drivers are mounted in direct contact with the casting to promote low operating temperature and long life. Housing is completely sealed against moisture and environmental contaminants (IP66) and is suitable for hose-down.

FINISH

Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling.

OPTICS

Precision-molded proprietary acrylic lenses provide five different photometric distributions suited to a variety of canopy and walkway applications. Light engines are available in 3000 K (80 min. CRI), 4000 K (70 min. CRI) or 5000 K (65 min. CRI) configurations.

ELECTRICAL

Light engines consist of 10 high-efficacy LEDs mounted to a metal-core circuit board to maximize heat dissipation and promote long life. The electronic driver has a power factor of >90%, THD <20%, and a minimum 2.5 KV surge rating. When ordering the SPD option, a separate surge protection device is installed within the luminaire which meets a minimum Category C low operation (per ANSI/IEEE C62.41.2).

INSTALLATION

Mounts to a 4x4" recessed or surface mount outlet box using a quick-mount kit (included); kit contains galvanized steel luminaire and outlet box plates and a full pad gasket. Kit has an integral mounting support that allows the luminaire to hinge down for easy electrical connections. Luminaire and plates are secured with captive screws. Supply leads are 12" in length as standard. For longer supply leads, please consult factory.

LISTINGS

CSA certified to U.S. and Canadian standards. Light engines and luminaire are IP66 rated. Rated for -40°C minimum ambient.

DesignLights Consortium® (DLC) qualified product — Fuel Pump Canopy Luminaires category. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org to confirm which versions are qualified.

WARRANTY

5-year limited warranty. Complete warranty terms located at www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx.

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C. Specifications subject to change without notice.

Specifications

Length: 17-3/4" *(45.1 cm)*

Width: 8-1/2" *(21.6 cm)*

Height: 3-7/16" *(8.7 cm)*

Weight (max): 16 lbs *(7.3 kg)*

Introduction

The D-Series LED Surface Canopy luminaire is ideal for covered walkways or drive-thrus, semi-covered outdoor aisles, and walk-in coolers and freezers. Its five optical choices provide the design flexibility to potentially reduce luminaire counts while still meeting IES criteria, lowering overall energy consumption.

Its expected service life of over 100,000 hours (20 years of nighttime operation) combined with the available motion/ambient sensor offers an extremely low maintenance solution that yields quick payback.

Options

Shipped installed

HS	House-side shield (housing visor) [7]
SF	Single fuse (120, 277, 347V) [8,9]
DF	Double fuse (208, 240, 480V) [8,9]
SPD	Separate surge protection [10]
CFMH	Cover finish matches housing [11]
PIR	Motion/ambient sensor for 8-15' mounting heights [12]
PIRH	Motion/ambient sensor for 15-30' mounting heights [12]
PIR3FC3V	Motion/ambient sensor for 8-15' mounting heights and for typical applications requiring daylight harvesting and Title 24 compliance [12]
PIRH3FC3V	Motion/ambient sensor for 15-30' mounting heights and typical applications requiring daylight harvesting and Title 24 compliance [12]
XAD	XPoint™ Wireless enabled [13]
XADN	XPoint™ Wireless enabled for emergency circuit [13]
XAD PIR	XPoint™ Wireless enabled motion/ambient sensor for 8-15' mounting heights [13,14]
XAD PIRH	XPoint™ Wireless enabled motion/ambient sensor for 15-30' mounting heights [13,14]
XADN PIR	XPoint™ Wireless enabled motion/ambient sensor for emergency circuits for 8-15' mounting heights [13,14]
XADN PIRH	XPoint™ Wireless enabled motion/ambient sensor for emergency circuits for 15-30' mounting heights [13,14]

Shipped separately

BDS	Bird shroud [7]

Finish *(required)*

DWHXD	White
DNAXD	Natural aluminum
DDBXD	Dark bronze

Accessories

Ordered and shipped separately.

DSXSCHS U	House-side shield (1 per light engine)
DSXSCBDSSJ DWHXD U	Bird shroud for SRM on surface J-box only, white (specify finish)

NOTES

1 Available with 700mA or 1000mA option only.
2 Not available with 347 or 480V.
3 AMBPC only available with 530mA or 700mA.
4 DesignLights Consortium qualified.
5 MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120, 208, 240 or 277 options only when ordering with fusing (SF, DF options).
6 N/A with one light engine (10C). Only available with 700mA or 1000mA.
7 Also available as a separate accessory; see Accessories information at left.
8 Single fuse (SF) requires 120, 277 or 347 voltage option. Double fuse (DF) requires 208, 240 or 480 voltage option.
9 Not available with XAD.
10 See the electrical section on page 3 for more details.
11 Available with DNAXD or DDBXD only.
12 PIR & PIR3FC3V specifies the Acuity Controls SBOR 10 ODP motion/ambient sensor, the PIRH & PIRH3FC3V specifies the Acuity Controls SBOR 6 ODP motion/ambient sensor.
13 Dimming driver standard. Not available with 347V or 480V. Not available with fusing.
14 XAD PIR specifies the Acuity Controls XPA SBOR10 wireless controller, the XADN PIR specifies the Acuity Controls XPA SBON10 wireless controller, the XAD PIRH specifies the Acuity Controls XPA SBOR6 wireless controller, and the XADN PIRH specifies the XPA SBON6 wireless controller.

Surface Mounting

FEATURES & SPECIFICATIONS

INTENDED USE

The energy savings, long life, and easy-to-install design of the D-Series LED Surface Canopy luminaire make it the smart choice for canopy lighting in commercial, industrial and institutional applications with mounting heights of 8-15'.

CONSTRUCTION

Two-piece die-cast aluminum housing has integral heat sink fins to optimize thermal management through conductive and convective cooling. Modular design allows for ease of maintenance and future light engine upgrades. The LED drivers are mounted in direct contact with the casting to promote low operating temperature and long life. Housing is completely sealed against moisture and environmental contaminants (IP66) and is suitable for hose-down.

FINISH

Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling.

OPTICS

Precision-molded proprietary acrylic lenses provide five different photometric distributions suited to a variety of canopy and walkway applications. Light engines are available in 3000 K (80 min. CRI), 4000 K (70 min. CRI) or 5000 K (65 min. CRI) configurations.

ELECTRICAL

Light engines consist of 10 high-efficacy LEDs mounted to a metal-core circuit board to maximize heat dissipation and promote long life. The electronic driver has a power factor of >90%, THD <20%, and a minimum 2.5 KV surge rating. When ordering the SPD option, a separate surge protection device is installed within the luminaire which meets a minimum Category C low operation (per ANSI/IEEE C62.41.2).

INSTALLATION

Mounts to a 4x4" recessed or surface mount outlet box using a quick-mount kit (included); kit contains galvanized steel luminaire and outlet box plates and a full pad gasket. Kit has an integral mounting support that allows the luminaire to hinge down for easy electrical connections. Luminaire and plates are secured with captive screws. Supply leads are 12" in length as standard. For longer supply leads, please consult factory.

LISTINGS

CSA certified to U.S. and Canadian standards. Light engines and luminaire are IP66 rated. Rated for -40°C minimum ambient.

DesignLights Consortium® (DLC) qualified product — Fuel Pump Canopy Luminaires category. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org to confirm which versions are qualified.

WARRANTY

5-year limited warranty. Complete warranty terms located at www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx.

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C. Specifications subject to change without notice.

Specifications

Length: 17-3/4" *(45.1 cm)*

Width: 8-1/2" *(21.6 cm)*

Height: 3-7/16" *(8.7 cm)*

Weight (max): 16 lbs *(7.3 kg)*

Introduction

The D-Series LED Surface Canopy luminaire is ideal for covered walkways or drive-thrus, semi-covered outdoor aisles, and walk-in coolers and freezers. Its five optical choices provide the design flexibility to potentially reduce luminaire counts while still meeting IES criteria, lowering overall energy consumption.

Its expected service life of over 100,000 hours (20 years of nighttime operation) combined with the available motion/ambient sensor offers an extremely low maintenance solution that yields quick payback.

Options

Shipped installed

HS	House-side shield (housing visor) [7]
SF	Single fuse (120, 277, 347V) [8,9]
DF	Double fuse (208, 240, 480V) [8,9]
SPD	Separate surge protection [10]
CFMH	Cover finish matches housing [11]
PIR	Motion/ambient sensor for 8-15' mounting heights [12]
PIRH	Motion/ambient sensor for 15-30' mounting heights [12]
PIR3FC3V	Motion/ambient sensor for 8-15' mounting heights and for typical applications requiring daylight harvesting and Title 24 compliance [12]
PIRH3FC3V	Motion/ambient sensor for 15-30' mounting heights and typical applications requiring daylight harvesting and Title 24 compliance [12]
XAD	XPoint™ Wireless enabled [13]
XADN	XPoint™ Wireless enabled for emergency circuit [13]
XAD PIR	XPoint™ Wireless enabled motion/ambient sensor for 8-15' mounting heights [13,14]
XAD PIRH	XPoint™ Wireless enabled motion/ambient sensor for 15-30' mounting heights [13,14]
XADN PIR	XPoint™ Wireless enabled motion/ambient sensor for emergency circuits for 8-15' mounting heights [13,14]
XADN PIRH	XPoint™ Wireless enabled motion/ambient sensor for emergency circuits for 15-30' mounting heights [13,14]

Shipped separately

BDS	Bird shroud [7]

Finish *(required)*

DWHXD	White
DNAXD	Natural aluminum
DDBXD	Dark bronze

Accessories

Ordered and shipped separately.

DSXSCHS U	House-side shield (1 per light engine)
DSXSCBDSSJ DWHXD U	Bird shroud for SRM on surface J-box only, white (specify finish)

NOTES

1 Available with 700mA or 1000mA option only.
2 Not available with 347 or 480V.
3 AMBPC only available with 530mA or 700mA.
4 DesignLights Consortium qualified.
5 MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120, 208, 240 or 277 options only when ordering with fusing (SF, DF options).
6 N/A with one light engine (10C). Only available with 700mA or 1000mA.
7 Also available as a separate accessory; see Accessories information at left.
8 Single fuse (SF) requires 120, 277 or 347 voltage option. Double fuse (DF) requires 208, 240 or 480 voltage option.
9 Not available with XAD.
10 See the electrical section on page 3 for more details.
11 Available with DNAXD or DDBXD only.
12 PIR & PIR3FC3V specifies the Acuity Controls SBOR 10 ODP motion/ambient sensor, the PIRH & PIRH3FC3V specifies the Acuity Controls SBOR 6 ODP motion/ambient sensor.
13 Dimming driver standard. Not available with 347V or 480V. Not available with fusing.
14 XAD PIR specifies the Acuity Controls XPA SBOR10 wireless controller, the XADN PIR specifies the Acuity Controls XPA SBON10 wireless controller, the XAD PIRH specifies the Acuity Controls XPA SBOR6 wireless controller, and the XADN PIRH specifies the XPA SBON6 wireless controller.

LUMARK® energy solutions

DESCRIPTION

The patented Lumark Crosstour™ LED Wall Pack Series of luminaries provides an architectural style with super bright, energy efficient LEDs. The low-profile, rugged die-cast aluminum construction, universal back box, stainless steel hardware along with a sealed and gasketed optical compartment make the Crosstour impervious to contaminants. The Crosstour wall luminaire is ideal for wall/surface, inverted mount for façade/canopy illumination, post/bollard, site lighting, floodlight and low level pathway illumination including stairs. Typical applications include building entrances, multi-use facilities, apartment buildings, institutions, schools, stairways and loading docks test.

Catalog #		Type
Project		
Comments		Date
Prepared by		

SPECIFICATION FEATURES

Construction

Slim, low-profile LED design with rugged one-piece, die-cast aluminum hinged removable door and back box. Matching housing styles incorporate both a small and large design. The small housing is available in 7W and 18W. The large housing is available in the 26W model. Patent pending secure lock hinge feature allows for safe and easy tool-less electrical connections with the supplied push-in connectors. Back box includes three (3) half-inch, NPT threaded conduit entry points. The universal back box supports both the small and large forms and mounts to standard 3-1/2" to 4" round and octagonal, 4" square, single gang and masonry junction boxes. Key hole gasket allows for adaptation to junction box or wall. External fin design extracts heat from the fixture surface. One-piece silicone gasket seals door and back box. Minimum 5" wide pole for site lighting application. Not recommended for car wash applications.

Optical

Silicone sealed optical LED chamber incorporates a custom engineered mirrored anodized reflector providing high-efficiency illumination. Optical assembly includes impact-resistant tempered glass and meets IESNA requirements for full cutoff compliance. Solid state LED Crosstour luminaries are thermally optimized with five (5) lumen packages in cool 5000K or neutral warm 3500K LED color temperature (CCT).

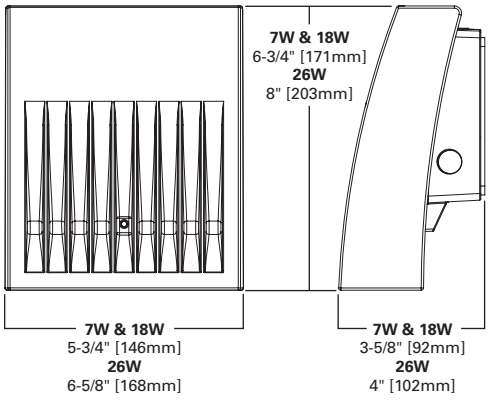
Electrical

LED driver is mounted to the die-cast housing for optimal heat sinking. LED thermal management system incorporates both conduction and natural convection to transfer heat rapidly away from the LED source. 7W models operate in -40°C to 40°C [-40°F to 104°F]. 18W and 26W models operate in -40°C to 40°C [-40°F to 104°F]. High ambient 50°C models available. Crosstour luminaires maintain greater than 90% of initial light output after 72,000 hours of operation. Three (3) half-inch NPT threaded conduit entry points allow for thru-branch wiring. Back box is an authorized electrical wiring compartment. Integral LED electronic driver incorporates surge protection. 120-277V 50/60Hz or 347V 60Hz models.

Finish

Crosstour is protected with a Super durable TGIC carbon bronze or summit white polyester powder coat paint. Super durable TGIC powder coat paint finishes withstand extreme climate conditions while providing optimal color and gloss retention of the installed life.

Warranty



Five-year warranty.

LUMARK® energy solutions

DESCRIPTION

The patented Lumark Crosstour™ MAXX LED Wall Pack Series of luminaries provides low-profile architectural style with super bright, energy-efficient LEDs. The rugged die-cast aluminum construction, back box with secure lock hinges, stainless steel hardware along with a sealed and gasketed optical compartment make Crosstour impervious to contaminants. The Crosstour MAXX wall luminaire is ideal for wall/surface, inverted mount for facade/canopy illumination, perimeter and site lighting. Typical applications include pedestrian walkways, building entrances, multi-use facilities, industrial facilities, perimeter parking areas, storage facilities, institutions, schools and loading docks.

SPECIFICATION FEATURES

Construction
Low-profile LED design with rugged one-piece, die-cast aluminum back box and hinged removable door. Matching housing styles incorporate both a full cutoff and refractive lens design. Full cutoff and refractive lens models are available in 41W and 79W. Patent pending secure lock hinge feature allows for safe and easy tool-less electrical connections with the supplied push-in connectors. Back box includes four 1/2" NPT threaded conduit entry points. The back box is secured by four lag bolts (supplied by others). External fin design extracts heat from the fixture surface. One-piece silicone gasket seals door and back box. Not recommended for car wash applications.

Optical
Silicone sealed optical LED chamber incorporates a custom engineered reflector providing high-efficiency illumination. Full cutoff models integrate an impact-resistant molded refractive prism optical lens assembly meeting requirements for Dark Sky compliance. Refractive lens models incorporate a molded lens assembly designed for maximum forward throw. Solid state LED Crosstour luminaries are thermally optimized with two lumen packages in cool 5000K or neutral warm 3500K LED color temperature (CCT).

Electrical
LED driver is mounted to the die-cast aluminum housing for optimal heat sinking. LED thermal management system incorporates both conduction and natural convection to transfer heat rapidly away from the LED source. 41W and 79W models operate in -40°C to 40°C [-40°F to 104°F]. High ambient 50°C [122°F] models available. Crosstour MAXX luminaires maintain greater than 90% of initial light output after 72,000 hours of operation. Four half-inch NPT threaded conduit entry points allow for thru-branch wiring. Back box is an authorized electrical wiring compartment. Integral LED electronic driver incorporates surge protection. 120-277V 50/60Hz, 480V 60Hz, or 347V 60Hz electrical operation.

Emergency Egress
Optional integral cold weather battery emergency egress includes emergency operation test switch, an AC-ON indicator light and a premium extended rated sealed maintenance-free nickel-metal hydride battery pack. The separate emergency lighting LEDs are wired to provide redundant emergency lighting. Listed to UL Standard 924, Emergency Lighting.

Area and Site Pole Mounting
Optional extruded aluminum 6-1/2" arm features internal bolt guides for supplied twin support rods, allowing for easy positioning of the fixture during installation to pole. Supplied with round plate adapter plate. Optional tenon adapter fits 2-3/8" or 3-1/2" O.D. Tenon.

Finish
Crosstour MAXX is protected with a super TGIC carbon bronze or summit white polyester powder coat paint. Super TGIC powder coat paint finishes withstand extreme climate conditions while providing optimal color and gloss retention of the installed life.

Warranty
Five-year warranty.

Introduction

The D-Series Size 1 Flood features precision optics to beautifully illuminate a variety of applications while its sleek, compact styling blends seamlessly with the environment.

The D-Series Flood reflector systems and cutting-edge chip-on-board LED technology produce low field-to-beam ratios for minimal spill light and incredible photometric performance. It's the ideal long-life replacement for 50 - 150W metal halide floods, with typical energy savings of 72% and expected service life of over 100,000 hours.

NOTES

1. MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120, 208, 240 or 277 options only when ordering with fusing (SF option) or photocontrol (PE).
2. Also available as separate accessories; see Accessories information at left.
3. Photocontrol (PE) requires 120, 208, 240 or 277 voltage option.
4. Single fuse (SF) requires 120 or 277 voltage option.

Performance Data

Lumen Output

Lumen values are from photometric tests performed in accordance with IESNA LM-79-08. Data is considered to be representative of the configurations shown, within the tolerances allowed by Lighting Facts. Actual performance may differ as a result of end-user environment and application. Actual wattage may differ by +/- 8% when operating between 120-480V +/- 10%. Contact factory for performance data on any configurations not shown here.

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

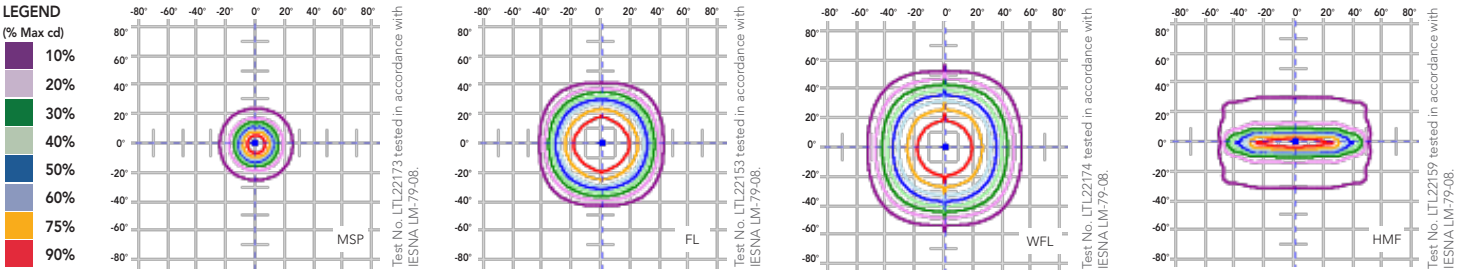
Ambient		Lumen Multiplier
0°C	32°F	1.07
10°C	50°F	1.04
20°C	68°F	1.02
25°C	**77°F**	**1.00**
30°C	86°F	0.98
40°C	104°F	0.95

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the **DSXF1 LED 2 A530** platform based on 8400 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	0	25,000	50,000	100,000
Lumen Maintenance Factor	1.0	0.94	0.90	0.80



Electrical Load

FEATURES & SPECIFICATIONS

INTENDED USE
The sleek design of the D-Series Size 1 Flood reflects the embedded high performance LED technology. It is ideal for landscape, signage and accent lighting in many commercial and residential applications.

CONSTRUCTION
Die-cast aluminum housing has integral heat sink fins to optimize thermal management through conductive and convective cooling. The LED driver is mounted in direct contact with the casting to promote low operating temperature and long life. Housing is completely sealed against moisture and environmental contaminants (IP65). Low EPA (0.6 ft^2) for optimized wind loading.

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling.

OPTICS
A variety of precision-molded vacuum-metallized specular reflectors are engineered for superior field-to-beam ratios, uniformity and spacing. Light engines are available in 3000K (70 CRI min.), 4000K (70 CRI min.) or 5000K (70 CRI min.) configurations. Optional visors offer additional versatility.

ELECTRICAL
Light engine(s) consist of chip-on-board (COB) LEDs directly coupled to the housing to maximize heat dissipation and promote long life (100,000 hrs, L80). Single-engine unit uses a Class 2 electronic driver; dual-engine unit uses a Class 1 electronic driver. Both drivers have a power factor >90%, THD <20%, and an expected life of 100,000 hours. Surge protection meets a minimum Category C Low operation (per ANSI/IEEE C62.41.2).

INSTALLATION
Integral adjustable knuckle with 1/2-14NPS threaded pipe, tenon slipfitter, or integral slipfitter, facilitates quick and easy installation to a variety of mounting accessories. This secure connection enables the D-Series Size 1 to withstand up to a 1.5 G vibration load rating per ANSI C136.31.

LISTINGS
CSA certified to U.S. and Canadian standards. Luminaire is IP65 rated. Rated for -40°C minimum ambient.

DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org to confirm which versions are qualified.

WARRANTY
Five year limited warranty. Full warranty terms located at www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx.

Note: Specifications subject to change without notice.

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

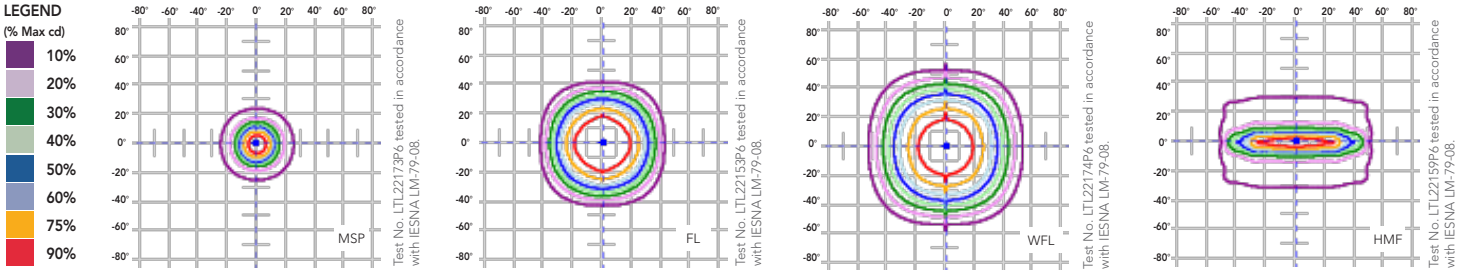
Ambient		Lumen Multiplier
0°C	32°F	1.07
10°C	50°F	1.04
20°C	68°F	1.02
25°C	**77°F**	**1.00**
30°C	86°F	0.98
40°C	104°F	0.95

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the DSXF LED 4 A530 platform based on 8400 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	0	25,000	50,000	100,000
Lumen Maintenance Factor	1.0	0.94	0.90	0.80



Electrical Load

Light Engines	Drive Current (mA)	System Watts	Current (A)					
			120	208	240	277	347	480
3	530	54W	0.47	0.28	0.22	0.2	0.17	0.12
4	530	74W	0.63	0.37	0.33	0.3	0.22	0.16

FEATURES & SPECIFICATIONS

INTENDED USE
The sleek design of the D-Series Size 2 Flood reflects the embedded high performance LED technology. It is ideal for larger signage, facade and flagpole lighting in many commercial and residential applications.

CONSTRUCTION
Die-cast aluminum housing has integral heat sink fins to optimize thermal management through conductive and convective cooling. The LED driver is mounted in direct contact with the casting to promote low operating temperature and long life. Housing is completely sealed against moisture and environmental contaminants (IP65). Low EPA (0.8 ft^2) for optimized wind loading.

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling.

OPTICS
A variety of precision-molded vacuum-metallized specular reflectors are engineered for superior field-to-beam ratios, uniformity and spacing. Light engines are available in 3000K (70 CRI min.), 4000K (70 CRI min.) or 5000K (70 CRI min.) configurations. Optional visors offer additional versatility.

ELECTRICAL
Light engine(s) consist of chip-on-board (COB) LEDs directly coupled to the housing to maximize heat dissipation and promote long life (100,000 hrs, L80). Class 1 electronic driver has a power factor >90%, THD <20%, and has an expected life of 100,000 hours with <1% failure rate. Surge protection meets a minimum Category C Low operation (per ANSI/IEEE C62.41.2).

INSTALLATION
Integral adjustable knuckle with 1/2-14 NPS threaded pipe, tenon slipfitter, or yoke mounting, facilitates quick and easy installation to a variety of mounting accessories. This secure connection enables the D-Series Size 2 to withstand up to a 1.5 G vibration load rating per ANSI C136.31.

LISTINGS
CSA certified to U.S. and Canadian standards. Luminaire is IP65 rated. Rated for -40°C minimum ambient.

DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org to confirm which versions are qualified.

WARRANTY
Five year limited warranty. Full warranty terms located at www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx.

Note: Specifications subject to change without notice.

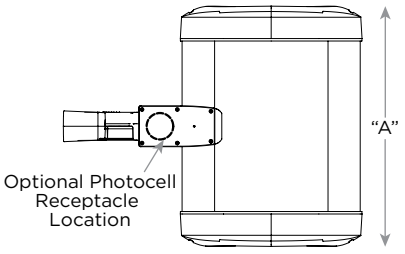
ARE-EDG-5S-AA

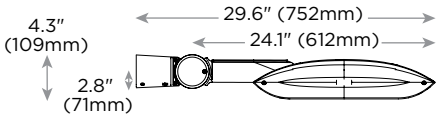
Cree Edge™ Area Luminaire – Type V Short – Adjustable Arm Mount

Product Description

Slim, low profile design minimizes wind load requirements. Luminaire sides are rugged cast aluminum with integral, weathertight LED driver compartments and high performance aluminum heat sinks. Adjustable arm mount is rugged die cast aluminum and mounts to 2" (51mm) IP, 2.375" (60mm) O.D. tenon. Includes leaf / debris guard.



Performance Summary



- Utilizes BetaLED® Technology
- Patented NanoOptic® Product Technology
- Made in the U.S.A. of U.S. and imported parts
- **CRI:** Minimum 70 CRI
- **CCT:** 5700K (+ / - 500K) Standard, 4000K (+ / - 300K)
- **Limited Warranty†:** 10 years on luminaire / 10 years on Colorfast DeltaGuard® finish
- **EPA and Weight:** Reference EPA and Weight spec sheet

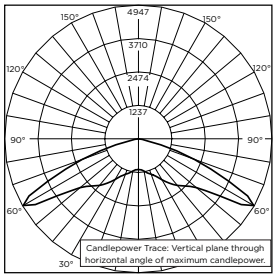
Product Specifications

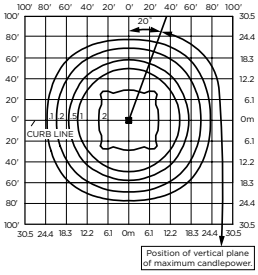
CONSTRUCTION & MATERIALS

- Slim, low profile, minimizing wind load requirements
- Luminaire sides are rugged die cast aluminum with integral, weathertight LED driver compartments and high performance heat sinks
- Adjustable mounting arm is rugged die cast aluminum and mounts to 2" (51mm) IP, 2.375" (60mm) O.D. tenon
- Includes leaf / debris guard
- Exclusive Colorfast DeltaGuard® finish features an E-Coat epoxy primer with an ultra-durable powder topcoat, providing excellent resistance to corrosion, ultraviolet degradation and abrasion. Standard is silver. Bronze, black, white, and platinum bronze are also available

ELECTRICAL SYSTEM



- **Input Voltage:** 120–277V or 347–480V, 50 / 60Hz, Class 1 drivers
- **Power Factor:** > 0.9 at full load
- **Total Harmonic Distortion:** < 20% at full load
- Integral weathertight electrical box with terminal strips (12Ga–20Ga) for easy power hookup
- Integral 10kV surge suppression protection standard
- To address inrush current, slow blow fuse or type C / D breaker should be used



REGULATORY & VOLUNTARY QUALIFICATIONS

- cULus Listed
- Suitable for wet locations
- Enclosure rated IP66 per IEC 60529 when ordered without P or R options
- Consult factory for CE Certified products
- Certified to ANSI C136.31-2001, 3G bridge and overpass vibration standards
- 10kV surge suppression protection tested in accordance with IEEE / ANSI C62.41.2
- Luminaire and finish endurance tested to withstand 5,000 hours of elevated ambient salt fog conditions as defined in ASTM Standard B 117
- Product qualified on the DesignLights Consortium™ ("DLC") Qualified Products List ("QPL") when ordered without full backlight control shield
- Meets Buy American requirements within ARRA

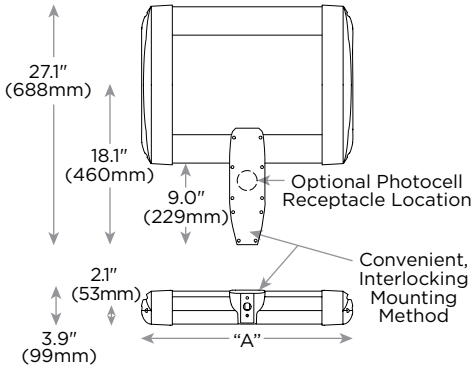
ARE-EDG-5M-DA

Cree Edge™ Area Luminaire – Type V Medium – Direct Arm Mount



Product Description

Slim, low profile design minimizes wind load requirements. Luminaire sides are rugged cast aluminum with integral, weathertight LED driver compartments and high performance aluminum heat sinks. Convenient, interlocking mounting method. Mounting housing is rugged die cast aluminum and mounts to 3–6" (76–152mm) square or round pole. Luminaire is secured by two 5/16-18 UNC bolts spaced on 2" (51mm) centers.

LED Low Profile Round

Flush Mount

HIGH-PERFORMANCE LED

FEATURES & SPECIFICATIONS

INTENDED USE

Provides general illumination in commercial and residential applications. Ideal for use in closets, foyers, hallways, corridors, bedrooms, offices, utility work areas, stairways and more.

CONSTRUCTION

Features a white acrylic diffuser and is available in 11″ and 14″ sizes. Hidden cam-latches provide easy diffuser removal for installation and maintenance.

OPTICS

11″ units produce 1100 lumens and 14″ units produce 1600 lumens, both at 50,000 hours life.

ELECTRICAL

Fixture operates at 120 volts, 60 Hz. 11″ Standard input = 16 watts, 69 lumens per watt.

14″ Standard input = 24 watts, 67 lumens per watt.

Works with most standard incandescent dimmers (see list of approved dimmers).

INSTALLATION

All mounting hardware included.

LISTINGS

cUL Certified to US and Canadian standards and listed suitable for damp locations.

WARRANTY

5-year limited warranty. Complete warranty terms located at www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx

Note: Specifications subject to change without notice.

Specifications

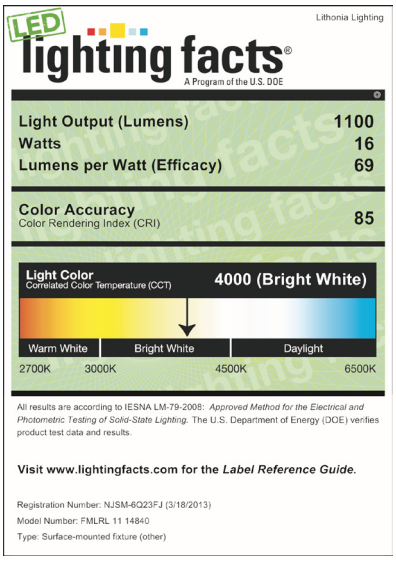
Height: FMLRL 11 – 2-7/8 (7.3)
FMLRL 14 – 3-1/8 (7.9)

Width: FMLRL 11 – 11 (27.9)
FMLRL 14 – 13-11/16 (34.7)

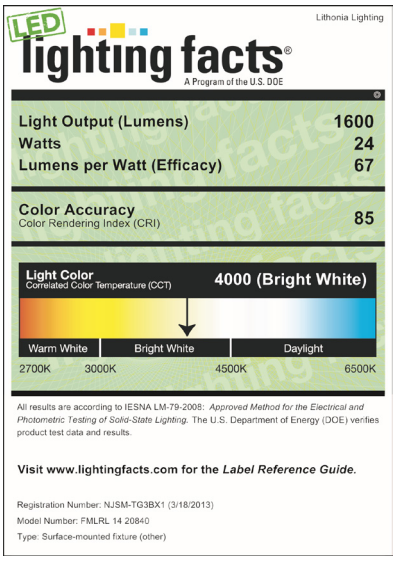
All dimensions are inches (centimeters) unless otherwise indicated.

ORDERING INFORMATION For shortest lead times, configure product using **bolded options.**

Example: FMLRL 11 14840



Series		Module/CRI		Color temperature	
FMLRL 11	11″ LED low profile round flush mount	**148**	>80	**40**	4000 K
FMLRL 14	14″ LED low profile round flush mount	**208**	>80	35	3500 K[1]
				30	3000 K
				27	2700 K[1]

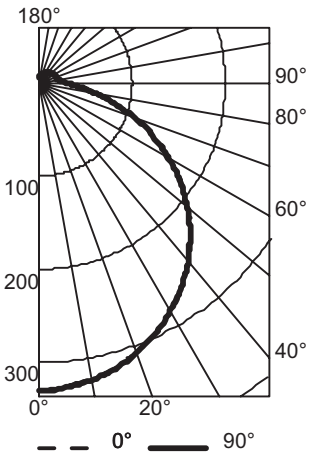


Accessories: *Order as separate catalog number.*	
DFMLRL11	11″ LED low profile round diffuser
DFMLRL14	14″ LED low profile round diffuser

Notes
1 Minimum 90-day lead time for non-standard color temperatures; minimum 50 order quantity.

LED Low Profile Round Flush Mount

LIGHTING FACTS



SUGGESTED DIMMERS

The FMLRL is designed to operate with most standard Triac Based (Forward Phase-Control or Leading Edge) dimmers and is not compatible with 0-10v dimming systems. The following is a list of dimmers tested and does not imply any guarantee or warranty of compatibility with a particular application. Unlisted dimmers do not imply non-compatibility.

UR Series

UR2-48™ and UR3-48™ LED Upgrade Kit – 4'

Product Description

The UR Series 4ft (1219mm) LED upgrade kit delivers 4500 lumens of enhanced spectrum 80 CRI light while achieving over 100 lumens per watt at the system level. This innovative kit is designed for upgrading existing 1'x4' (305mm x 1219mm) or 2'x4' (610mm x 1219mm) fixtures to energy saving LED. The UR Series is available in neutral or cool color temperatures and with step dimming or 0-10V dimming. The UR Series upgrade kit is easy to install and fits into almost any existing linear fluorescent fixture making it a perfect upgrade option where energy savings and long life are critical.

Performance Summary

- Upgrade Existing 1'x4' (305mm x 1219mm) & 2'x4' (610mm x 1219mm) fixtures
- **Efficacy:** 102 LPW at source level
- **System Delivered Light Output:** 4500 lumens
- **Target Fixture Delivered Light Output:** 4000 lumens*
- **Input Power:** 44 watts
- **CRI:** 80
- **CCT:** 3500K, 4000K
- **Input Voltage:** 120-277 VAC or 347 VAC
- **Limited Warranty†:** 7 years
- **Lifetime:** Designed to last 50,000 hours
- **Controls:** Step Level to 50% or 0-10V Dimming to 5%
- **Mounting:** Existing dry or damp rated linear fluorescent fixtures including troffers, parabolics, strips, wraps, volumetric/baskets and industrials; not intended for use in vaportights

4' (1219mm) LED Lightbar
MOL- 44" (1118mm)

The UR Series upgrade kit ships as two components: lightbars and driver. Each component must be ordered separately.

Accessories

Field-Installed
Emergency Backup UR-EB10W - 10W

Ordering Information

Fully assembled kit is composed of two components that must be ordered separately.
Example: **Lightbar:** UR 48 35K FD LB 2 + **Driver:** UR2 48 45L 10V FD DR

Product Specifications

CREE LED TECHNOLOGY

Cree's total systems approach to product development is a comprehensive engineering philosophy that combines the most advanced LED sources, driver technologies, optics and forms. The result is highly-reliable luminaire solutions for indoor applications that reduce energy use, extend lifetimes, and maximize illumination performance and quality.

CONSTRUCTION & MATERIAL

- Lightweight aluminum heat sink housing provides strength and durability
- Durable plastic mounting clips with integrated magnets allow for simple snap on design to fixture
- Shatterproof design

OPTICAL SYSTEM

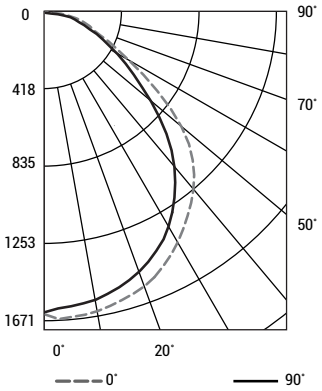
- Specialized polycarbonate lens design for optimal light distribution and smooth visual effect
- Measured and designed to achieve optimal light performance in existing fluorescent troffers

ELECTRICAL SYSTEM

- Integral, high-efficiency driver and power supply
- **Power Factor:** = 0.9 nominal
- **Input Power:** Stays constant over life
- **Input Voltage:** 120-277V, 347V, 50/60Hz
- **Operating Temperature Range:** 0°C - +35°C (32°F - +95°F)
- **Total Harmonic Distortion:** < 20%
- **Source Current:** 0.25mA

CONTROLS

- Step dimming to 50%. Reference www.cree.com/Lighting/Products/Indoor/Upgrade-Solutions/UR-Series
- Continuous dimming to 5% with 0-10V DC control protocol. Reference www.cree.com/Lighting/Products/Indoor/Upgrade-Solutions/UR-Series



REGULATORY & VOLUNTARY QUALIFICATIONS

- DLC qualified. Please refer to www.designlights.org/QPL for most current information
- UL1598C (Retrofit Kit)
- This product is UL Classified for U.S. and Canada for use in existing linear fluorescent fixtures
- Suitable for damp locations
- Designed for indoor use
- Meets FCC Part 15 standards for conducted and radiated emissions

Photometry

UR2 48 45L 40K FD INSTALLED IN A 2X4 RECESSED TROFFER BASED ON CESTL REPORT TEST #: 2013-0080

Fixture photometry has been conducted by a NVLAP accredited testing laboratory in accordance with IESNA LM-79-08. IESNA LM-79-08 specifies the entire luminaire as the source resulting in a fixture efficiency of 100%.

UR Series

UR2-24™ and UR3-24™ LED Upgrade Kit – 2'

Product Description

The UR Series 2ft (610mm) LED upgrade kit delivers 3600 lumens of enhanced spectrum 80 CRI light while achieving 100 lumens per watt at the system level. This innovative kit is designed for upgrading existing 1'x2' (305mm x 610mm) or 2'x2' (610mm x 610mm) fixtures to energy saving LED. The UR Series is available in neutral or cool color temperatures and with step dimming or 0-10V dimming. The UR Series upgrade kit is easy to install and fits into almost any existing linear fluorescent fixture making it a perfect upgrade option where energy savings and long life are critical.

2' (610mm) LED Lightbar
MOL- 22" (559mm)

The UR Series upgrade kit ships as two components: lightbars and driver. Each component must be ordered separately.

Performance Summary

- Upgrade Existing 1'x2' (305mm x 610mm) or 2'x2' (610mm x 610mm) fixtures
- **Efficacy:** 100 LPW at source level
- **System Delivered Light Output:** 3600 lumens
- **Target Fixture Delivered Light Output:** 3200 lumens*
- **Input Power:** 36 watts
- **CRI:** 80
- **CCT:** 3500K, 4000K
- **Input Voltage:** 120-277 VAC or 347 VAC
- **Limited Warranty†:** 7 years
- **Lifetime:** Designed to last 50,000 hours
- **Controls:** Step Level to 50% or 0-10V Dimming to 5%
- **Mounting:** Existing dry or damp rated linear fluorescent fixtures including troffers, parabolics, strips, wraps, volumetric/baskets and industrials; not intended for use in vaportights

Accessories

Field-Installed
Emergency Backup UR-EB5W - 5W

Ordering Information

Fully assembled kit is composed of two components that must be ordered separately.
Example: **Lightbar:** UR 24 35K FD LB 2 + **Driver:** UR2 24 36L 10V FD DR

Lightbar (Driver must be ordered separately)

Product Specifications

CREE LED TECHNOLOGY

Cree's total systems approach to product development is a comprehensive engineering philosophy that combines the most advanced LED sources, driver technologies, optics and forms. The result is highly-reliable luminaire solutions for indoor applications that reduce energy use, extend lifetimes, and maximize illumination performance and quality.

CONSTRUCTION & MATERIAL

- Lightweight aluminum heat sink housing provides strength and durability
- Durable plastic mounting clips with integrated magnets allow for simple snap on design to fixture
- Shatterproof design

OPTICAL SYSTEM

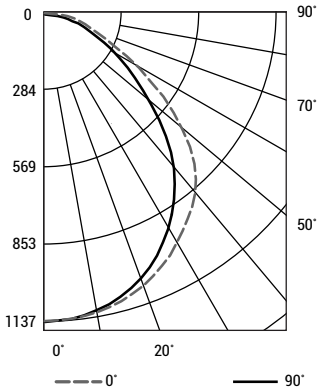
- Specialized polycarbonate lens design for optimal light distribution and smooth visual effect
- Measured and designed to achieve optimal light performance in existing fluorescent troffers

ELECTRICAL SYSTEM

- Integral, high-efficiency driver and power supply
- **Power Factor:** = 0.9 nominal
- **Input Power:** Stays constant over life
- **Input Voltage:** 120-277V, 347V, 50/60Hz
- **Operating Temperature Range:** 0°C - +35°C (32°F - +95°F)
- **Total Harmonic Distortion:** < 20%
- **Source Current:** 0.25mA

CONTROLS

- Step dimming to 50%. Reference www.cree.com/Lighting/Products/Indoor/Upgrade-Solutions/UR-Series
- Continuous dimming to 5% with 0-10V DC control protocol. Reference www.cree.com/Lighting/Products/Indoor/Upgrade-Solutions/UR-Series



REGULATORY & VOLUNTARY QUALIFICATIONS

- DLC qualified. Please refer to www.designlights.org/QPL for most current information
- UL1598C (Retrofit Kit)
- This product is UL Classified for U.S. and Canada for use in existing linear fluorescent fixtures
- Suitable for damp locations
- Designed for indoor use
- Meets FCC Part 15 standards for conducted and radiated emissions

Photometry

UR2 24 36L 35K FD INSTALLED IN A 2X2 RECESSED TROFFER BASED ON CSA REPORT TEST #: 2638466-02

Fixture photometry has been conducted by a NVLAP accredited testing laboratory in accordance with IESNA LM-79-08. IESNA LM-79-08 specifies the entire luminaire as the source resulting in a fixture efficiency of 100%.

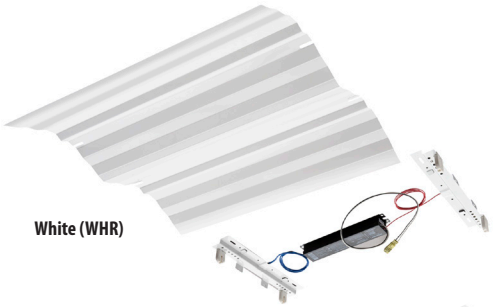
2MRT

2' X 2' RELIGHT TWO LAMPS

FEATURES & SPECIFICATIONS

INTENDED USE — The 2MRT troffer retrofit kit is designed to fit easily in most commercial fluorescent troffers to provide maximum efficiency and full, even lamp imaging below. This series delivers high light levels for general lighting retrofits of normally spaced 2'x2' recessed troffer-style fixtures. Typical applications include classrooms, offices, hospitals and commercial areas.

CONSTRUCTION — Reflectors are precision-formed aluminum for optimal performance, durability and ease of handling. Segmented reflectors are available with high-reflectance white painted or highly specular anodized finishes. Reflector optics offer optimum photometric distribution to meet application and budget requirements. Socket brackets are white pre-painted, die-formed aluminum and are designed to fit in most troffers. Socket brackets may be mounted either to end plates or to the upper surface of the existing "host" fixture housing for maximum flexibility.



ELECTRICAL — Standard ballast is high-efficiency, CEE (Consortium for Energy Efficiency) qualified, instant start, <10% THD, universal voltage and sound rated A. Optional program start and step-dim bi-level ballasts are available as well as several ballast factor options to maximize energy savings and to allow the amount of light to be balanced to the application.

INSTALLATION — End bracket/electrical assembly installs quickly and easily using self-tapping screws (included). Reflectors install quickly and securely without requiring tools. Standard kits ship with factory pre-wired and pre-assembled electrical assembly with plug-in ballast disconnect for fast, simple installation. Reflectors are packed separately. All materials are shipped in optimized carton quantities to minimize jobsite waste. Lamps (not included) are secured with rotary locking lampholders for ease of relamping and to withstand vibration or incidental contact.

LISTINGS — UL/cUL Classified. Installation of the 2MRT does not impact existing fixture UL Listing.

WARRANTY — 1-year limited warranty. Complete warranty terms located at www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx

Note: Specifications subject to change without notice.

White (WHR)

Specular (SSR)

Specifications

Intended to be installed in most existing recessed lensed troffers or parabolic fixtures.

ORDERING INFORMATION Lead times will vary depending on options selected. Consult with your sales representative.

Post Top LED Kit

Luminaire kit for retrofitting Pole Lamps with High Efficiency LED Lighting.

The Post Top LED Kit retrofits area pole lighting and fits common sized globes, lowering electric consumption by up to 70%.

Patented LED light reflector system, places light where it is most needed, leading to higher fixture efficiencies and lower operating costs.

U.S. and International Patents Issued and Pending.
US 7,578,605 B1

Quick Installation with Post Top LED Lamp Kit for Decorative Poles

The Post Top LED Kit from IntenCity retrofits pole lights with a LED light engine that greatly lowers costs by up to 70%. It is economical and long lasting, with LED L70 life rated at 70,000 hours. The LED light engine is self contained for easy retrofitting in common lamp poles, used to light walkways, area lighting and in decorative uses. The Post Top LED Kit reuses existing lamp poles or can be used with new ones. The kit is built for ease of field installation, and can be customized for most pole lamp fittings.

LED Lighting to Lower Maintenance, Reducing Electric Costs

The LED light engine is available in either a 40, 60, or 90 watt configuration, to replace HID discharge lamps, such as mercury vapor, metal halide, or high pressure sodium lamps. The Post Top LED Kit reduces electric consumption by up to 70% and has a rated life over 70,000 hours. This greatly reduces lamp changing, ballast replacements, and hazardous waste costs for the mercury lamps.

LED Pole Lighting Kit – Highly Efficient, Directed Light

Unique to the IntenCity Post Top LED Kit is a sealed LED units, which through a patented reflector system directs light to where it is most needed. This leads to directing more light where it is needed, high fixture efficiency, and a brighter safer appearance to the area, thus upgrading the quality of light.

Applications for Post Top LED Kit

- Walkways, Paths, Streetscapes, Decorative Area Lighting
- Residential Districts, Business Districts, Accent Lighting, Historical Districts, General Lighting
- Shopping Centers, Malls, Plaza Lighting
- College, Business Parks, and Campuses
- Parks and Recreational Lighting

LED Pole Top Kit Features:

- Saves up to 70% of electric cost, while greatly reducing maintenance
- Highly durable electronics, extensive heat management for long service life
- L70 Lifetime: 70,000 hours
- 100 to 277 Volts standard, 480 Volts available
- Adapts easily to existing or new pole lamps and globe configurations. Adapts to Acorn type decorative globes.
- Available in 40, 60, or 90 watt LED configurations
- Reduces light pollution by directing light where it is most needed

Compatibility Chart / Energy Savings

PTLK - Pole Top LED Lighting Kit

Solid-State Outdoor LED Luminaire for area lighting

The Pole Top LED Kit affords the opportunity to retrofit existing or new decorate pole lamps with high efficiency, lower cost LED lighting, while upgrading the area lighting appearance.

Made in USA

General Specifications	
General	LED replacement kit for post top pole lighting, Type V.
Initial Light Output	3,000 (40 Watt), 5,000 Lumens (60 Watt), 6500 Lumens (90 watts), 62 Lumens/ Watt
Durability, Dust, and Moisture	Intrusion Protection Rating — IP66 on light engine, and power supply.
Color	5,000K Typical, other options available, CRI: 66
L-70 Lifetime	10+ Year Design Life, over 70% of original lumen output after 70,000 hours at 30° C ambient temperature
Environmental Specifications	
Operating Temperature	-40° C to 55° C
Storage Temperature	-40° C to 85° C
Humidity	0% to 99%
Power and Compliance Standards	
Input Power	PF> 0.95, Current THD <10%, Zero energy consumption in off state.
Input Current	0.46A @ 120 V, 0.23A @ 220V, 0.20A @ 277V
Wattage	40, 60, or 90 watts
Operating Voltage	100 to 277VAC, 50 to 60 hertz
Line Connections	3 wire: line, neutral and ground
Physical Specifications	
Finish and Construction	Clear Anodized Aluminum, and Stainless Steel. Heavy gauge aluminum extrusion, stainless steel fasteners, gasket sealed Butyrate (high transmissive plastic) lens with UV inhibitor. Adapters to fit most pole lamp configurations, consult factory for fittings.
Dimensions	5 1/4" Diameter x 9" Tall, 5 1/4" Diameter x 13 1/2" Tall, Custom Available
Weight	12 Pounds

Technical Specifications

Other

WPLED20 with Photocell:

120V Button Photocell Included.‰_ Photocell is only compatible with 120V.

Patents:

The LPACK design is protected under patents in the U.S. Pat. D634873, Canada Pat. 133207, China Pat. ZL201030129137, Taiwan Pat. D139540 and Mexico Pat. 32491

Warranty:

RAB warrants that our LED products will be free from defects in materials and workmanship for a period of five (5) years from the date of delivery to the end user, including coverage of light output, color stability, driver performance and fixture finish.

Equivalency:

The WPLED20NW is Equivalent in delivered lumens to a 150W Metal Halide Wallpack.

HID Replacement Range:

The WPLED20NW can be used to replace 100-175W Metal Halide Wallpacks based on delivered lumens.

Listings

UL Listing:

Suitable for wet locations. Suitable for mounting within 1.2m (4ft) of the ground.

Dark Sky Approved:

The International Dark Sky Association has approved this product as a full cutoff, fully shielded luminaire.

IESNA LM-79 & IESNA LM-80 Testing:

RAB LED luminaires have been tested by an independent laboratory in accordance with IESNA LM-79 and 80, and have received the Department of Energy "Lighting Facts" label.

LED Characteristics

Lifespan:

100,000-hour LED lifespan based on IES LM-80 results and TM-21 calculations.

Color Consistency:

7-step MacAdam Ellipse binning to achieve consistent fixture-to-fixture color.

Color Stability:

LED color temperature is warrantied to shift no more than 200K in CCT over a 5 year period.

Color Uniformity:

RAB's range of CCT (Correlated color temperature) follows the guidelines of the American National Standard for Specifications for the Chromaticity of Solid State Lighting (SSL) Products, ANSI C78.377-2008.

Color Accuracy:

74 CRI

Color Temperature (Nominal CCT):

4000K

Construction

Finish:

Our environmentally friendly polyester powder coatings are formulated for high-durability and long-lasting color, and contains no VOC or toxic heavy metals.

Cold Weather Starting:

The minimum starting temperature is -30°C.

Ambient Temperature:

Suitable for use in 50°C (122°F) ambient temperatures.

Thermal Management:

Integral cast aluminum mounting pad and external fins for optimal heat sinking to ensure cool operation with maximum LED life and light output.

Housing:

Precision die cast aluminum housing, lens frame and mounting plate.

Two Mounting Options:

Junction Box with 5 Conduit Entry Points and Threaded Plugs for surface mounting plus Cover Plate for mounting over 4" recessed junction box included with WPLED20NW.

Green Technology:

RAB LEDs are Mercury, Arsenic and UV free.

For use on LEED Buildings:

IDA Dark Sky Approval means that this fixture can be used to achieve LEED Credits for Light Pollution Reduction.

Gaskets:

High Temperature Silicone.

Electrical

THD:

7.4% at 120V

Driver:

Automatic Voltage Sensing Driver for 120 - 277 volts.

Driver:

Constant Current, Class2, 100 -277V, 50/60 Hz, 100 - 240VAC 0.3 - 0.15A, 277VAC 0.15A

Technical Specifications (continued)

Electrical

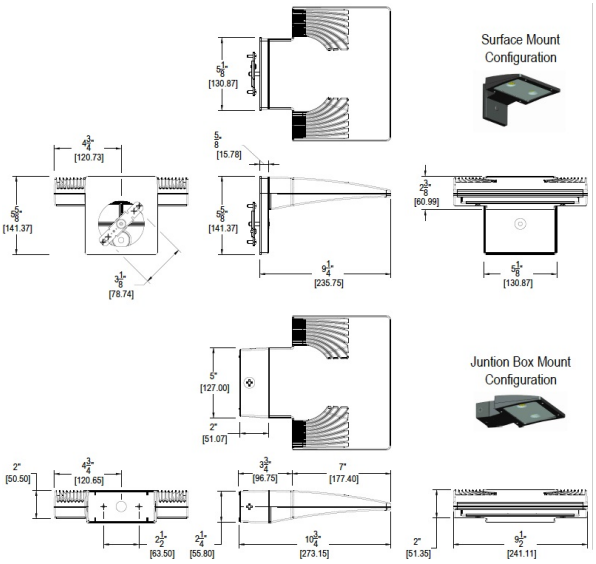
Surge Protection:

4kV

Optical

Fixture Efficacy:

50.5 Lumens per Watt



BUG Rating:

B1 U0 G0

WPLED26 with Photocell:

120V Button Photocell Included. Photocell is only compatible with 120V.

California Title 24:

WPLED26/PC complies with 2013 California Title 24 building and electrical codes as a commercial outdoor non-pole-mounted fixture < 30 Watts.

Equivalency:

The WPLED26 is Equivalent in delivered lumens to a 175W Metal Halide Wallpack.

HID Replacement Range:

The WPLED26 can be used to replace 150 - 200W Metal Halide Wallpacks based on delivered lumens.

Patents:

The WPLED design is protected by U.S. Pat. D634878, Canada Pat 134878, China Pat. CN301649064S.

Country of Origin:

Designed by RAB in New Jersey and assembled in the USA by RAB's IBEW Local 3 workers.

Buy American Act Compliant:

This product is a COTS item manufactured in the United States, and is compliant with the Buy American Act.

Recovery Act (ARRA) Compliant:

This product complies with the 52.225-21 "Required Use of American Iron, Steel, and Manufactured Goods-- Buy American Act-- Construction Materials (October 2010).

Trade Agreements Act Compliant:

This product is a COTS item manufactured in the United States, and is compliant with the Trade Agreements Act.

GSA Schedule:

Suitable in accordance with FAR Subpart 25.4.

Listings

UL Listing:

Suitable for wet locations. Suitable for mounting within 1.2m (4ft) of the ground.

DLC Listed:

This product is on the Design Lights Consortium (DLC) Qualified Products List and is eligible for rebates from DLC Member Utilities.

Dark Sky Approved:

The International Dark Sky Association has approved this product as a full cutoff, fully shielded luminaire.

LED Characteristics

Lifespan:

100,000-hour LED lifespan based on IES LM-80 results and TM-21 calculations.

Color Consistency:

3-step MacAdam Ellipse binning to achieve consistent fixture-to-fixture color.

ESM 2:
Lighting System Improvements - Exterior

ESM Overview

Ameresco will install a state-of-the-art lighting system to benefit the building occupants of the City of Bristol. Our project replaces or upgrades **1,129** exterior fixtures and will enhance the quality of the City's lighting system.

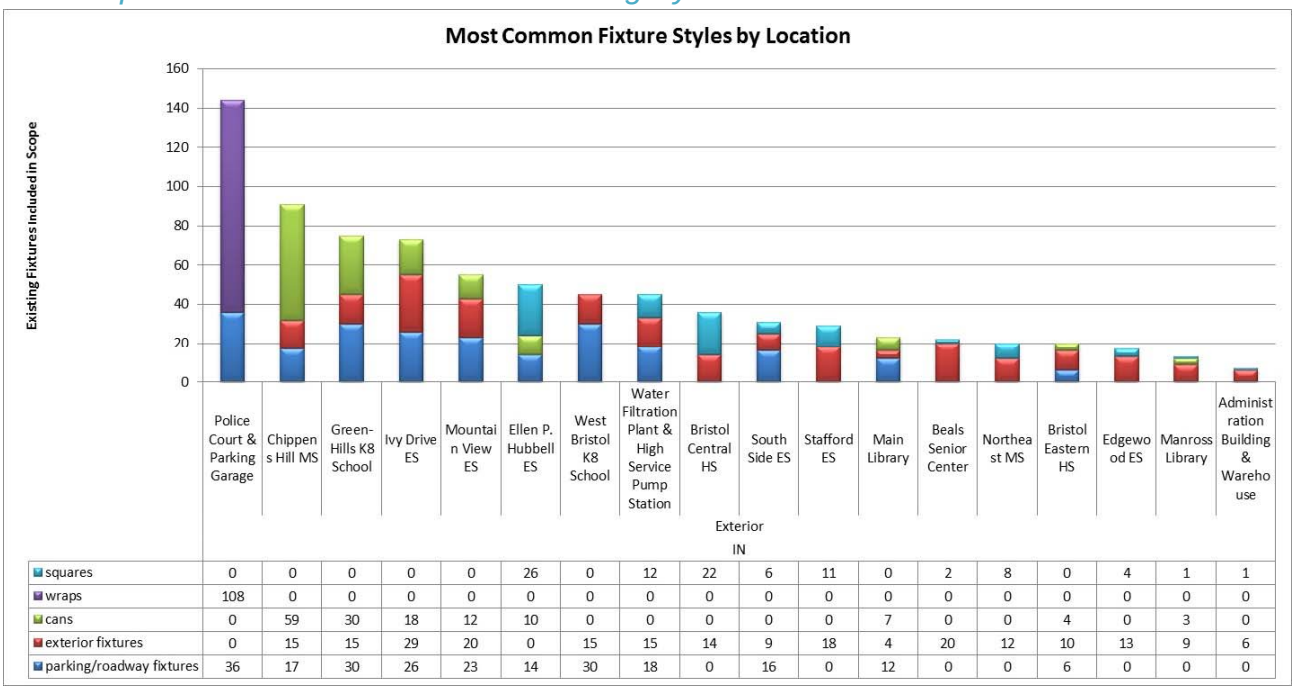

Figure 2.1: New fixtures will improve aesthetics and provide substantial energy savings.

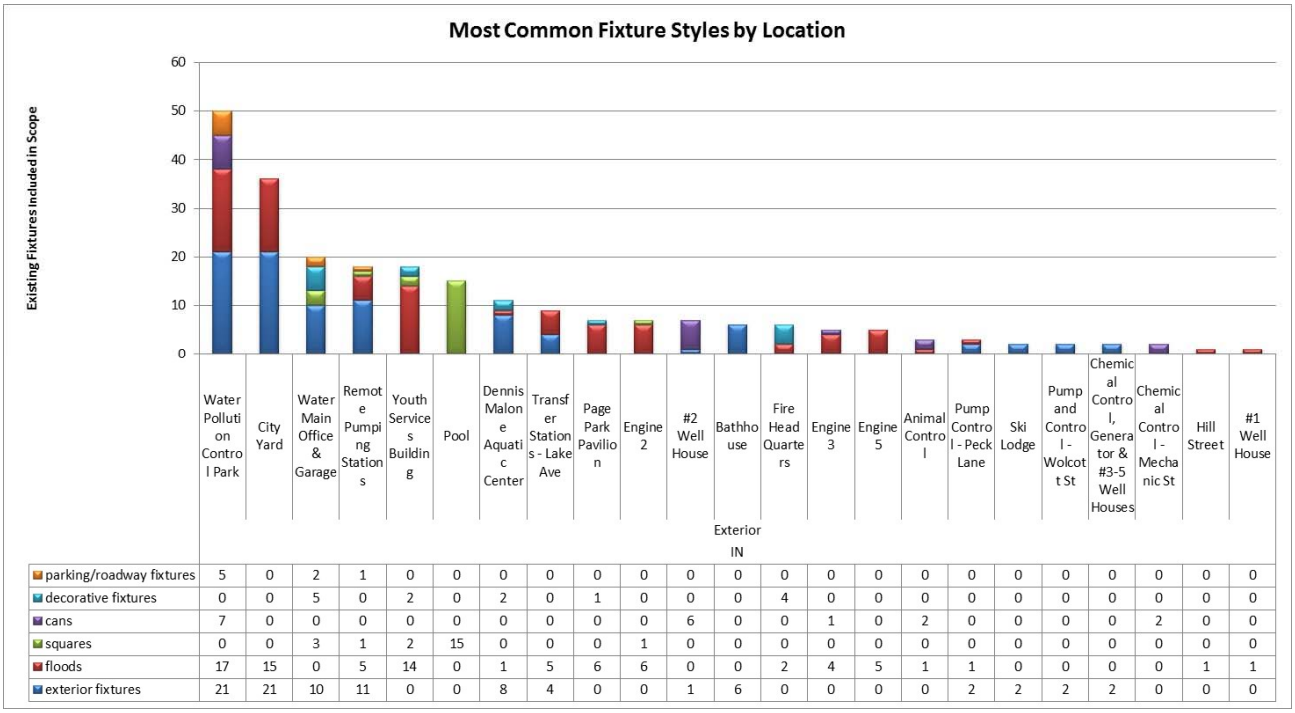
ESM Detail



Existing System

Ameresco identified 102 different exterior lamp/ballast/fixture combinations. Metal Halide (MH) lamps are used in 36% of the fixtures. High Pressure Sodium (HPS) lamps are also used in 25% of the fixtures. All of these HID fixtures use standard magnetic ballasts. Compact fluorescent lamps are found in 13% of fixtures. Linear fluorescent T8 and T5 lamps are found in 12% of fixtures. LED lamps are already in use in 7% of fixtures. Incandescent lamps are installed in the remaining 7% of fixtures.

"Page content is subject to Confidentiality Restrictions"

Proposed System

Ameresco proposes to replace existing exterior HID fixtures with latest LED fixtures, which offer vastly improved product lifetimes, while providing appropriate light levels with minimal wasted light & trespass. LED fixtures produce light efficiently, and effectively direct that light onto the target areas.

Considering lifetime ratings of LED fixtures are 2 to 3 times greater than the HID's they replace, service intervals are greatly extended. Where HPS lamps exist, the change from "yellow" to "white" light will make the exterior appear much brighter, although future light readings taken with standard photopic meters may indicate non-compliance with IESNA recommended practice.

Following are highlights of the proposed scope, with predominant applications presented first. We then proceed in descending order, with each subsequent item representing a smaller portion of the scope. Please refer to the "Lighting System Analysis", as this is a complete list of work to be performed. Only locations that appear in that document are included in this project.

Specific Information about the Proposed System, by Strategy

365 existing fixtures shall be replaced with a new LED wall-pack.

154 existing fixtures will receive a customized LED conversion kit for recessed cans which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.

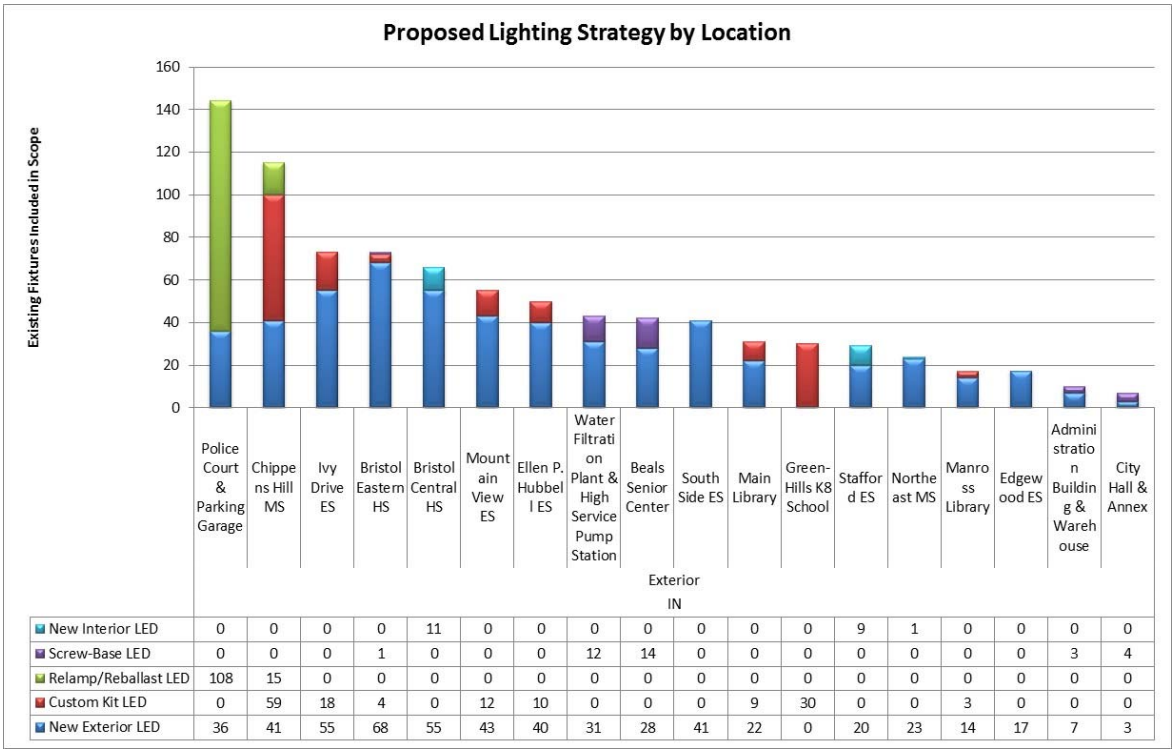
151 existing fixtures shall be replaced with a new LED flood.

"Page content is subject to Confidentiality Restrictions"

148 existing fixtures shall be replaced with a new LED shoebox.

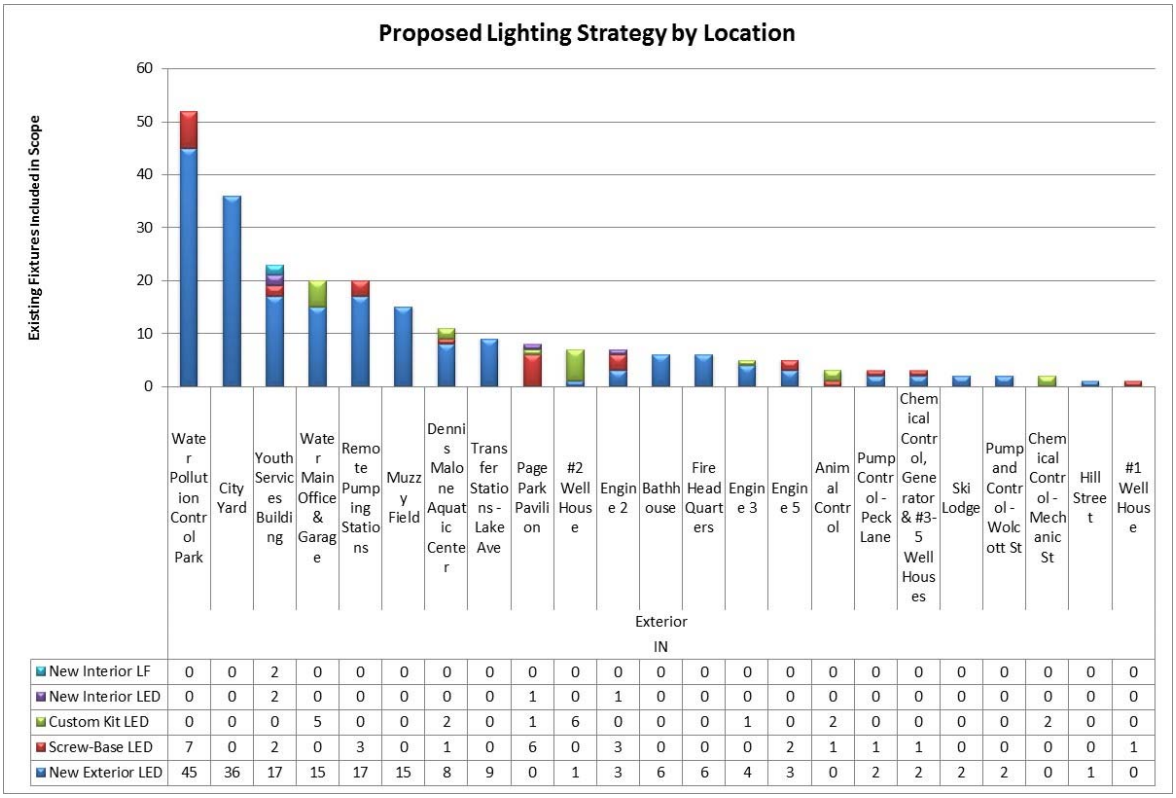
123 existing fixtures will receive LED lamps and electronic ballasts.

82 existing fixtures shall be replaced with a new LED canopies.



69 existing fixtures will receive screw-based LED lamps. They are highly efficient, and with lifetimes up to 50,000 hours, maintenance intervals are greatly extended.

25 existing fixtures shall be replaced with new LED drums.



10 existing fixtures will receive a customized LED conversion kit for exterior area fixtures which is designed to increase fixture efficiency, save substantial energy, and greatly extend service intervals.

2 existing fixtures shall be replaced with new vaportights.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. The lighting system audit completed for each facility will be submitted as the basis for construction. The audit will include the existing descriptions, operating hours, and proposed retrofit description. These documents will be submitted for review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions, and submitted in multiple for record.

>Impact on Facility Operations and Performance

All installations will be conducted during normal business hours or after normal operating hours if interruption of functions is anticipated. Installations will be coordinated with appointed personnel.

Despite our best efforts, cataloguing every single fixture in every location is extremely difficult. **Therefore, fixtures or areas not listed are excluded from our scope.** Typical examples are low use areas such as closets and crawlspaces, areas inaccessible during the audit, areas to be renovated, high-security locations, and specialty fixtures such as medical or stage lighting.

>Integration of Proposed Equipment with Existing Systems

The new lighting system, and all components thereof, will be fully integrated into the existing lighting systems. We assume the entire lighting and lighting controls systems comply with, but not limited to, the latest codes, the latest standards, local jurisdictions, and work was done in a quality workmanship manner, per

"Page content is subject to Confidentiality Restrictions"

NECA, and other applicable recommend best practices universally accepted throughout the electrical industry. Further we assume that all existing devices, which are defined in NEC, which includes but not limited to switches, outlets, wiring, etc. are in acceptable condition in order to implement our scope as outlined in the contract documents. All existing junction boxes, poles, mounting surfaces and structures are assumed to be in acceptable condition to allow the installation of the products indicated in the scope. Required upgrades to meet safety or other codes, and/or to prepare the location for the installation as described above, can be performed on a time and material basis.

>Environmental Impact

There are no potential adverse environmental impacts associated with this lighting upgrade. During construction, Ameresco will remove, package, and recycle all existing lamps that contain mercury and ballasts that contain PCBs or DEHP according to applicable regulations.

ESM 3:
Lighting Controls

ESM Overview

Ameresco proposes to install new lighting controls in the City of Bristol buildings and schools to ensure that lighting does not operate unnecessarily. Energy waste occurs when a fixture is energized but not used and when illuminance exceeds what is necessary for task performance. Ameresco noted some occupants are not careful about turning off lights when they leave the room, making automated controls advantageous.

Ameresco has proposed occupancy sensors to be installed in many classrooms, offices, and bathrooms, plus a number of facility-specific control strategies.

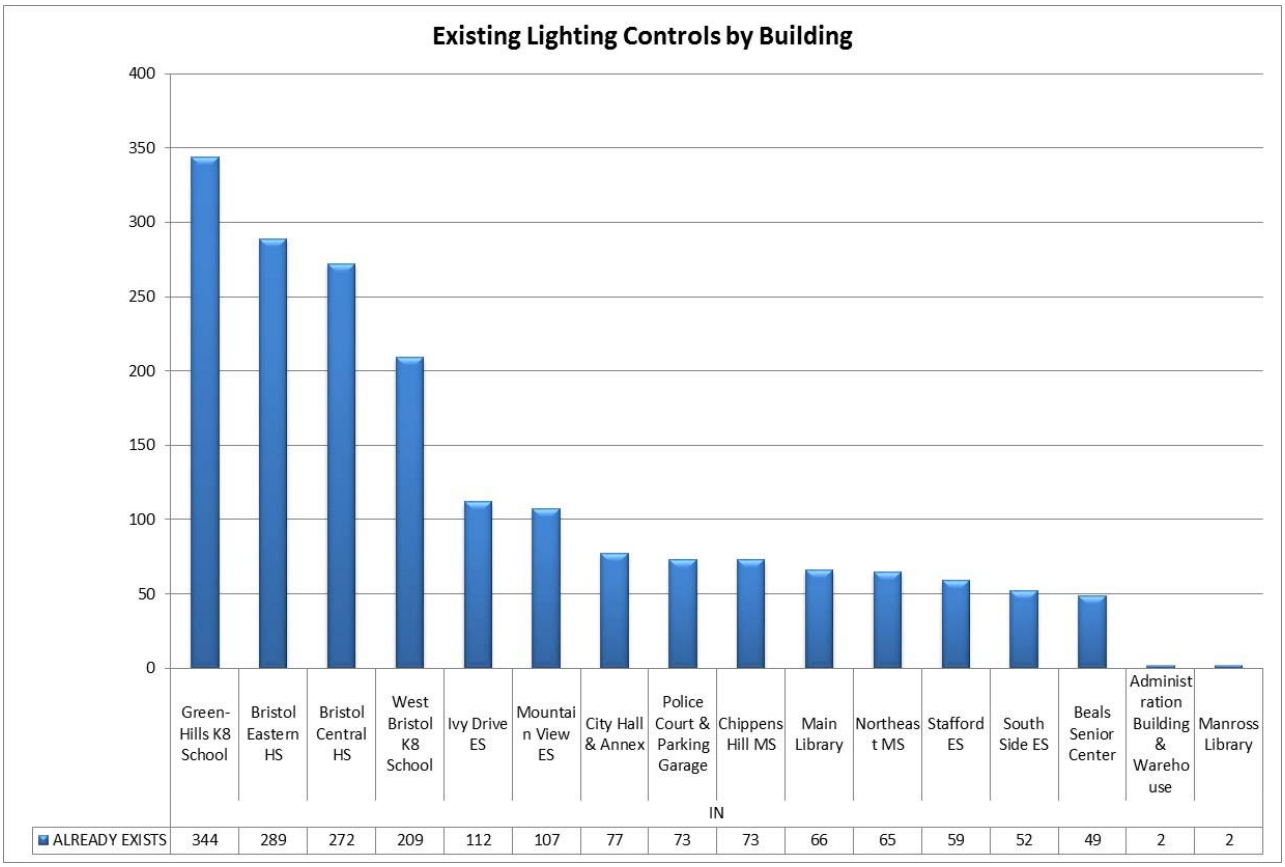

Figure 3.1: Wireless controls offer occupancy control of rooms with spline or hard ceilings and provide substantial energy savings.

ESM Detail

Existing System

There are both standard toggle style light switches and existing occupancy sensors in use. The table below shows the number of existing occupancy sensors at each building where they were identified.

"Page content is subject to Confidentiality Restrictions"

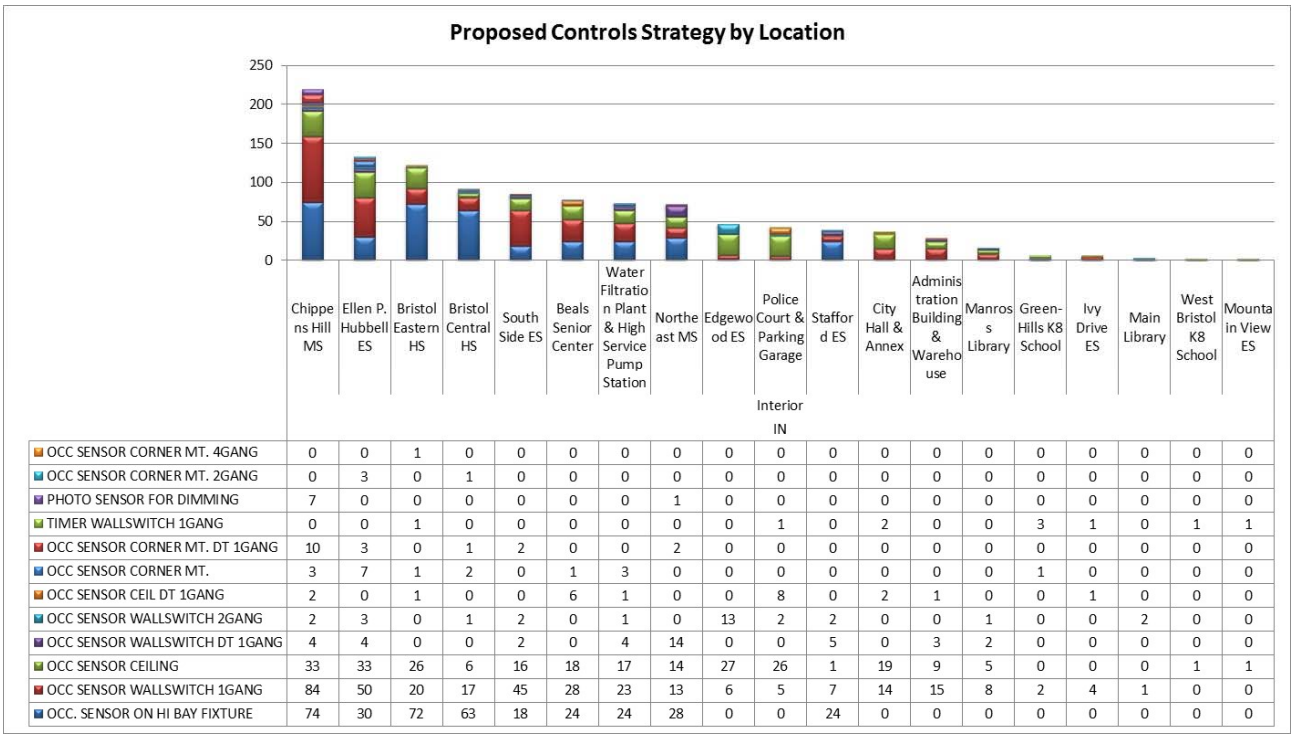
Proposed System

Project wide, Ameresco will install **1,399** local lighting controls employing a variety of strategies, each of which was customized to the unique space. We selected appropriate areas that contain several controllable fixtures, which have intermittent occupancy, and where a safety hazard will not be created if the sensor inadvertently turns the lights off. Applicable areas include classrooms, offices, baths, the cafeteria, and the library.

Please Note: For the two lighting options presented in ESM 1, (the base option and the LED option), the proposed lighting controls scope will remain the same, however the energy savings would be slightly less with the LED option due to the LEDs using less power and therefore less wattage to control.

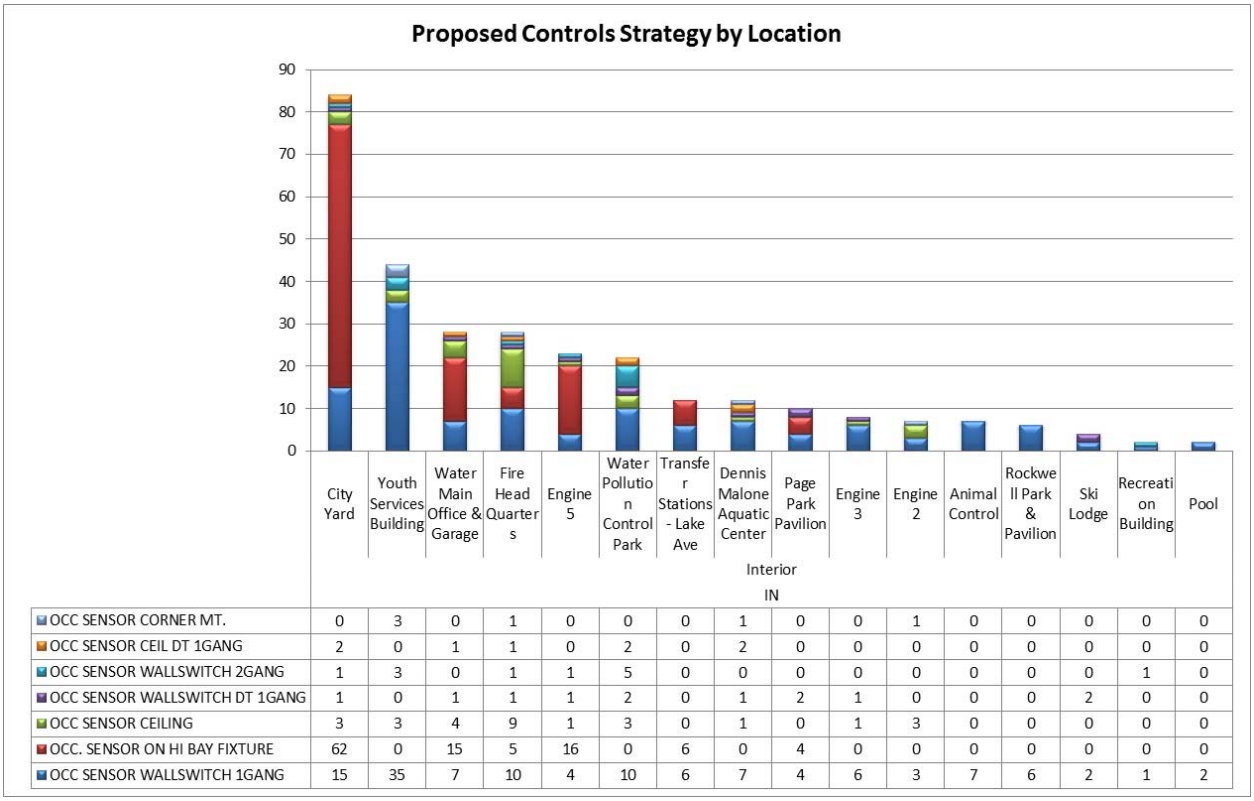
Bathrooms or other areas without direct line-of-sight to the sensor, will receive dual-technology sensors that "listen" for activity in addition to "looking" for motion.

The high-bays in gyms will have motion sensors, allowing each one to operate independently for maximum savings and flexibility. The photocell option can also prevent fixtures from operating when ample daylight is available, if desired.



For some mechanical spaces, programmable timers will be installed. Staff will simply push the button to receive a preset amount of time. They can see the time running as it counts down on the display. Before the time runs out, the lights will flash, indicating that the occupant has a few minutes before the timer automatically turns off the lights.

Auto-dimming Ballasts



For stairwells and the auditorium lobby at Chippens Hill MS, specialized daylight harvesting ballasts will automatically dim each fixture based on how much natural light is available. When windows provide natural daylight to a room, the ballast uses integrated automatic controls to reduce your energy and daytime peak demand load. The ballast automatically responds to daylight, reducing electric light only when the room grows brighter, and then increasing electric light only when the room grows dimmer. The light levels never drop below the minimum designed levels. The system was designed to be simple and effective, offering easy installation, no maintenance, no commissioning, and no external controls. The automatic energy savings comes without distraction to room occupants. The change in daylight ambient light level is far more significant in the room then the change in the electric light, allowing the dimming and brightening to go unnoticed.

Specific Information about the Proposed System, by Building

Below is a brief description of some of the work to be accomplished. Please refer to the "Lighting System Analysis" in Appendix I, as this is a complete list of work to be performed.

>Equipment, Design and Construction Documentation

Equipment will be identified in submittals provided for approval prior to procurement. The lighting system audit completed for each facility will be submitted as the basis for construction. The audit will include the existing descriptions, operating hours, and proposed retrofit description. These documents will be submitted for review and comment. Upon approval, these will constitute the construction documents. Upon completion of the construction phase, the documents will be revised as needed to reflect "As-Built" conditions, and submitted in multiple for record.

>Impact on Facility Operations and Performance

All installations will be conducted after school hours, and will be coordinated with the appointed personnel.

Typically, automated lighting controls are not installed in every single location due to practicality, payback, or safety considerations. Therefore, fixtures or areas not listed are excluded from our scope.

>Integration of Proposed Equipment with Existing Systems

The new lighting system, and all components thereof, will be fully integrated into the existing lighting systems. We assume the entire lighting and lighting controls systems comply with, but not limited to, the latest codes, the latest standards, local jurisdictions, and work was done in a quality workmanship manner, per NECA, and other applicable recommend best practices universally accepted throughout the electrical industry. Further we assume that all existing devices, which are defined in NEC, which includes but not

"Page content is subject to Confidentiality Restrictions"

limited to switches, outlets, wiring, etc. are in acceptable condition in order to implement our scope as outlined in the contract documents. All existing junction boxes, poles, mounting surfaces and structures are assumed to be in acceptable condition to allow the installation of the products indicated in the scope. Required upgrades to meet safety or other codes, and/or to prepare the location for the installation as described above, can be performed on a time and material basis.

>Environmental Impact

There are no potential adverse environmental impacts associated with these lighting controls.

Notes:	
A	Applicable building included in comprehensive energy audit
B	Lighting demand savings {kW} associated with lighting retrofit measures
C	Lighting energy savings {kWh} associated with lighting retrofit measures
D	Estimated percentage of lighting energy transmitted to conditioned space
E	Estimated length of heating season
F	Estimated heating system efficiency, interacted with other measures
G	Resulting heating penalty due to lighting upgrades = [col C] x [col D] x 3,413 x ([col E] / 12) / [col F] / 1,000,000
H	Estimated percentage of space cooled
I	Estimated Length of cooling season
J	Estimated cooling system efficiency, interacted with other measures
K	Resulting cooling benefit due to lighting upgrades = [col C] x [col D] x 3,413 x ([col I] / 12) / [col J] / 1,000,000
